UNIT 16 문장의 적절한 위치 찾기

Gate W

Parks take the shape demanded by the cultural concerns of their time. Once parks are in place, they are no inert stage — their purposes and meanings are made and remade by planners and by park users. Moments of park creation are particularly telling, however, for they reveal and actualize ideas about nature and its relationship to urban society. Indeed, what distinguishes a park from the broader category of public space is the representation of nature that parks are meant to embody. Public spaces include parks, concrete plazas, sidewalks, even indoor atriums. Parks typically have trees, grass, and other plants as their central features. When entering a city park, people often imagine a sharp separation from streets, cars, and buildings. *There's a reason for that: traditionally, park designers attempted to create such a feeling by planting tall trees at park boundaries, building stone walls, and constructing other means of partition.* What's behind this idea is not only landscape architects' desire to design aesthetically suggestive park spaces, but a much longer history of Western thought that envisions cities and nature as antithetical spaces and oppositional forces.

*aesthetically 미적으로 **antithetical 대조적인

공원은 그것이 속한 시대의 문화적 관심사가 요구하는 형태를 취한다. 일단 공원이 마련되면, 그것은 비활성화된 단계가 아닌데 그것의 목적과 의미는 계획자와 공원 이용자에 의해 만들어지고 다시 만들어진다. 그러나 공원을 조성하는 순간들은 특히 의미가 있는데, 자연과 그것이 도시 사회와 갖는 관계에 대한 생각을 드러내고 실현하기 때문이다. 실제로 공원을 더 넓은 범주의 공공 공간과 구별하는 것은 공원이 구현하려는 자연의 표현이다. 공공 공간에는 공원, 콘크리트 광장, 보도, 심지어 실내 아트리움도 포함된다. 일반적으로 공원에는 그들의 중심적인 특색으로 나무, 풀, 그리고 다른 식물들이 있다. 도시 공원에 들어갈 때, 사람들은 흔히 거리, 자동차, 그리고 건물과의 뚜렷한 분리를 상상한다. 거기에는 이유가 있는데, 전통적으로 공원 설계자들은 공원 경계에 키 큰 나무를 심고, 돌담을 쌓고, 다른 칸막이 수단을 세워 그런 느낌을 만들어 내려고 했다. 이 생각의 배후에는 미적인 암시가 있는 공원 공간을 설계하려는 조경가의 욕망뿐만 아니라 도시와 자연을 대조적인 공간과 반대 세력으로 상상하는 훨씬 더 오래된 서구 사상의 역사가 있다.

01

When we are in groups, we tend to feel that we, personally, aren't as responsible as we ***would be*** if we ***were acting*** on our own. So the decisions that the group makes can easily become extreme. Occasionally, groups reach riskier decisions — they decide to take actions which are more challenging or unsafe than they should be. Sometimes, though, they make choices that are too cautious. It's *known as* group polarization: a tendency towards extremes. A lot depends on how the discussions in the group develop. *If one person is advocating a risky strategy early on, others may begin to think of even more challenging examples, and that leads the discussion towards reaching a riskier decision*. But if someone advocates more cautious approaches at an early stage, this too can influence the direction of the discussion, *resulting in* a more cautious decision than the group members might have made individually.

우리가 그룹에 속해 있을 때, 우리는 개인적으로 우리가 스스로 행동할 때만큼 책임감이 없다고 느끼는 경향이 있습니다. 따라서 그룹이 내리는 결정은 쉽게 극단적이 될 수 있습니다. 때때로 그룹은 더 위험한 결정에 도달합니다. 즉, 해야 할 것보다 더 어렵거나 안전하지 않은 조치를 취하기로 결정합니다. 하지만 때때로 그들은 너무 신중한 선택을 합니다. 극단으로 향하는 경향인 집단 양극화로 알려져 있습니다. 그룹의 토론이 어떻게 진행되는지에 따라 많은 것이 달라집니다. 한 사람이 초기에 위험한 전략을 옹호하면 다른 사람들은 훨씬 더 어려운 예를 생각하기 시작할 수 있으며 이는 더 위험한 결정에 도달하는 방향으로 토론을 이끕니다. 그러나 누군가가 초기 단계에서 더 신중한 접근 방식을 옹호한다면 이것 역시 토론의 방향에 영향을 미쳐 그룹 구성원이 개별적으로 내린 것보다 더 신중한 결정을 내릴 수 있습니다.

어법 정리 - 가정법 과거: 현재 사실의 반대

if S (조)동사과거 ~, S w/c/s/m + 동원 ~ [지금 ~라면, ~할 텐데] If I were a bird, I would fly to you.

숙어 정리 - **know 숙어**

He is known **to** the people. ~ 에게 알려지다 He is known **as** a programer. ~ 로서(로) 알려지다 (자격/ 직업)
He is known **for** his skill. ~ 로 알려지다 (유명한 이유) He is known **by** his friends/ accident. ~ 에 의해 알려지다 (판단의 기준)

숙어 정리 - 원인과 결과 구분 - 전치사나 접속사나 뒷 부분과 묶어 해석 하면 쉽다.

result from ~로부터 생기다 [원인] result in ~가 되다 [결과] The accident resulted (from the driver.)
That is because ~ 때문이다 [원인] That is why ~한 이유이다 [결과] That is [why the driver is in hospital.]

02

Advertising in the United States is a relatively large and stable marketplace with a dollar volume of activity closely tied to the overall health of the economy. The same is true of other mature industrialized nations, especially those of Western Europe. One significant difference, however, is the way commercial media evolved. In the United States, radio and television systems began as commercial ventures; in many other countries media were largely or completely government supported for years. Different models of commercial support are still evolving and the precise configurations vary by country. *This evolution does not mean, however, that governments are uninvolved in steering the development of media*. As Joseph Straubhaar observes, television systems are often "stubbornly national," which means advertisers must tailor "global" media plans to the regulatory policies and cultural expectations of individual countries.

*configuration: 형태, 구조 **stubbornly: 완강하게, 고집스럽게

미국의 광고는 경제의 전반적인 건전성과 밀접한 관련이 있는 달러 규모의 활동이 있는 상대적으로 규모가 크고 안정적인 시장입니다. 다른 성숙한 선진국, 특히 서유럽 국가도 마찬가지입니다. 그러나 한 가지 중요한 차이점은 상업 매체가 진화한 방식입니다. 미국에서 라디오와 텔레비전 시스템은 상업적 벤처로 시작되었습니다. 다른 많은 국가에서 미디어는 수년 동안 대부분 또는 전적으로 정부의 지원을 받았습니다. 다양한 상업적 지원 모델이 계속 발전하고 있으며 정확한 구성은 국가마다 다릅니다. 그러나 이러한 진화가 정부가 미디어 개발에 관여하지 않는다는 의미는 아닙니다. Joseph Straubhaar가 관찰한 바와 같이, 텔레비전 시스템은 종종 "완고하게 국가적"이며, 이는 광고주가 개별 국가의 규제 정책 및 문화적 기대에 맞게 "글로벌" 미디어 계획을 조정해야 함을 의미합니다.

03

Some people think that facts are the same as events, which they regard as the "objective," "hard core" elements of this universe. The main reason for thinking this is that events seem the best candidates to offer us a rock-solid foundation for our facts. True, events do happen or do not happen; you can neglect them but not deny them. So by replacing facts with events, we might think we have found the strong objective foundation that we strive for. *However, facts and events are concepts very different from each other*. Unlike facts, events are dated, tied to space and time, whereas facts are detached from space and time. It is even considered a fact that certain events did not occur; it is a fact, for instance, that Darwin did not have a copy of Mendel's 1866 article in his collection. Apparently, a fact is not the same as an event; the best we can say is that a fact is a description of an event, but not the event itself.

어떤 사람들은 사실이 사건과 동일하다고 생각하며, 그들은 사건을 이 우주의 '객관적이고' '핵심적인' 요소로 간주한다. 이렇게 생각하는 주된 이유는 사건이 우리에게 우리가 가진 사실에 대한 확고부동한 토대를 제공하는 가장 좋은 후보처럼 보이기 때문이다. 사건은 실제로 일어나거나 혹은 일어나지 않는 것이 사실이므로, 여러분은 그것을 무시할 수는 있지만 그것을 부인할 수는 없다. 그래서 사실을 사건으로 대체함으로써, 우리는 우리가 얻으려고 노력하는 강력한 객관적인 토대를 찾았다고 생각할 수도 있다. 그러나 사실과 사건은 서로 매우 다른 개념이다. 사실과 달리, 사건은 날짜가 있어 시공간에 묶여 있는 반면에, 사실은 시공간에서 분리되어 있다. 심지어 특정한 사건이 일어나지 않았다는 것조차 사실로 여겨지는데, 예를 들어, Darwin이 장서에 Mendel의 1866년 논문 한 편을 가지고 있지 않았던 것은 사실이다. 분명히, 사실은 사건과 같지 않은데, 우리가 말할 수 있는 최선의 것은 사실은 사건에 관한 기술이지만, 사건 그 자체는 아니라는 것이다.

04

The extent to which decision making is shared with subordinates or concentrated at the top of the hierarchy differs across organizations. Thus, organizations can vary from strongly centralized decision-making practices to highly participatory decision-making practices. In participatory decision making, subordinates have ***much*** more input into how decisions are made. Research shows that greater participation in decision making improves employees' satisfaction with the decisions, but does not necessarily translate into better group performance. Therefore, research has investigated when participatory decision making is most useful, and when it is less important. *When the workers are highly educated, intelligent, and have considerable expertise in their areas, participatory decision making is more effective*. Additionally, when the task at hand is highly complex and knowledge about local conditions is important to the decision, participatory decision making is important. Finally, in times of crisis, when the decisions have very strong impact, participatory decision making is useful.

*subordinate: 하급자 **hierarchy: 위계, 계층

의사 결정이 부하 직원과 공유되거나 계층 구조의 최상위에 집중되는 정도는 조직마다 다르다. 따라서 조직은 강력한 중앙 집권형 의사 결정 관행에서 고도의 참여형 의사 결정 관행에 이르기까지 다양할 수 있다. 참여형 의사 결정에서, 하급자는 어떻게 결정이 내려지는가에 관해 훨씬 더 많은 의견을 낸다. 연구에 따르면, 의사 결정에 더 많이 참여하는 것은 그 결정에 대한 직원들의 만족도를 향상하지만, 반드시 더 나은 집단 성과로 이어지는 것은 아니다. 그러므로 연구는 참여형 의사 결정이 가장 유용한 때와 그것이 덜 중요한 때를 조사했다. 근로자가 고학력이고, 지적이며, 자신의 분야에서 상당한 전문 지식을 가지고 있을 때, 참여형 의사 결정이 더 효과적이다. 게다가, 당면한 과제가 매우 복잡하고 현지 상황에 관한 지식이 의사 결정에 중요할 때, 참여형 의사 결정이 중요하다. 마지막으로, 결정이 매우 강력한 영향을 미치는 위기 시기에, 참여형 의사 결정이 유용하다.

어법 정리 - 비교급 앞에 표현

much, far, even, still, a lot, by far *** very 는 불가**

어휘 정리 -

consider ⓥ 고려하다 - considerate ⓐ 사려 깊은 / considerable ⓐ 상당한

05

Insects attract collectors' attention because they are extremely diverse and often bear spectacular colors. To biologists, however, bright coloration has been a constantly renewed puzzle because it makes an insect a highly visible prey to prospective predators. Charles Darwin understood that bright colors or exaggerated forms could evolve via sexual selection, the process by which individuals compete for access to mates and fertilization opportunities. However, he felt sexual selection could not account for the striking color pattern of nonreproductive larvae in, for example, Pseudosphinx hawk moth caterpillars. *In a reply to Darwin about this puzzle, Alfred R. Wallace proposed that bright colors could advertise the distastefulness of the caterpillars to experienced predators*. Indeed, prey that are not edible to predators are predicted to gain by exhibiting very recognizable colors; experienced predators can then correctly identify and subsequently avoid attacking such prey. E. B. Poulton later developed this idea, expanded it to other warning signals (i.e., sounds or smells), and coined the term aposematism to describe this phenomenon (from the Greek "away" and "sign").

*caterpillar: 애벌레 **larva: 유충, 애벌레 (pl. larvae) ***Pseudosphinx hawk moth: Pseudosphinx 속(屬) 박각시나방

곤충은 매우 다양하고 종종 화려한 색상을 지니고 있기 때문에 수집가의 관심을 끈다. 그러나 생물학자들에게 강렬한 천연색은 끊임없이 다시 등장하는 난제가 되어 왔는데, 왜냐하면 그것 때문에 곤충은 자신을 잡아먹을 가능성이 있는 동물의 눈에 아주 뜨이는 먹이가 되기 때문이다. Charles Darwin은 강렬한 색이나 과장된 형태가 성 선택, 즉 개체들이 짝에 접근하여 수정할 기회를 얻으려고 경쟁하는 과정을 통해 진화할 수 있다고 여겼다. 그러나 그는 성 선택이 가령 'Pseudosphinx' 속(屬) 박각시나방 애벌레에 속하는 비생식 유충의 눈에 뜨이는 색깔 패턴을 설명할 수 없다고 생각했다. 이 난제에 대해 Darwin에게 보낸 답장에서 Alfred R. Wallace는 강렬한 색깔이 경험 많은 포식자들에게 애벌레의 맛이 고약하다는 것을 짐짓 드러낼 수 있다는 의견을 제시했다. 정말로, 포식자가 먹을 수 없는 먹이는 매우 잘 알아볼 수 있는 색깔을 보임으로써 이득을 얻을 것으로 예측되는데, 그러면 경험 많은 포식자들은 그런 먹이를 정확히 식별한 후에 공격하지 않을 수 있기 때문이다. E. B. Poulton은 나중에 이 생각을 발전시켜 그것을 다른 경고 신호(즉, 소리나 냄새)로 확장했고, 이 현상을 기술하기 위해 (그리스어 '떨어져'와 '신호'라는 말로부터) aposematism(경계색)이라는 용어를 만들어 냈다.

06

In ancient and medieval times considerable respect was accorded to language by those working in the scientific field. According to the ancient metaphysical Weltanschauung, it was believed that the structure of reality and of thought were so closely allied that they were interchangeable. A logical statement — not only a matter of thinking but also of linguistics — was automatically a true statement of reality. Since such a statement happened to be true, it did not need to be subjected to experimental testing. *However, in modern times it was realized for the first time that trust in the accord between reality and thinking was based on a grossly exaggerated notion of the scope of human reason*. In order to discover whether a logical statement (i.e. the logical language) was really true (i.e. agreed with reality), the statement should be tested against empirical reality in an experiment. The emphasis on the physical experiment is characteristic of modern science. Later again it was realized that even this approach overrated the importance of thinking: from the outset research should be directed by experiments, although that experimental action — like any action — required the support of logical thought.

*Weltanschauung: 세계관 **empirical: 경험적인

고대와 중세에는 과학 분야에서 일하는 사람들에게 언어가 상당한 존중을 받았다. 고대의 형이상학적 '세계관'에 따르면, 현실의 구조와 사고의 구조가 매우 밀접하게 연관되어 있어 그것들은 상호 대체가 가능하다고 여겨졌다. '논리적' 진술은, 사고의 문제일 뿐만 아니라 언어학의 문제이기도 하여, 자동적으로 현실에 대한 '사실적' 진술이었다. 그러한 진술이 마침 사실이었기 때문에, 그것은 실험에 의한 검증을 받을 필요가 없었다. 하지만 현대에는 현실과 사고 사이의 일치에 대한 믿음이 인간 이성의 범위에 대한 크게 과장된 개념에 기초하고 있다는 것을 처음으로 깨닫게 되었다. 논리적 진술(즉, 논리적 언어)이 정말 사실인지 (즉, 현실과 일치하는지) 알아내기 위해, 그 진술은 실험에서 경험적 현실과 비교하여 검증되어야 한다. 물리적 실험을 강조하는 것이 현대 과학의 특징이다. 이후 다시 이 접근법조차 사고의 중요성을 과대평가했다는 것을 깨달았다. 즉, 그 실험 행동은 어떤 행동과 마찬가지로 논리적 사고의 뒷받침이 필요했지만, 연구는 처음부터 실험이 이끌어야 했다.

Later again it was r_____ that even this approach overrated the importance of thinking: from the outset r_____ should be d_____ by experiments, although that experimental action — like any action — r_____ the support of logical thought.

고대와 중세에는 과학 분야에서 일하는 사람들에게 언어가 상당한 존중을 받았다. 고대의 형이상학적 '세계관'에 따르면, 현실의 구조와 사고의 구조가 매우 밀접하게 연관되어 있어 그것들은 상호 대체가 가능하다고 여겨졌다. '논리적' 진술은, 사고의 문제일 뿐만 아니라 언어학의 문제이기도 하여, 자동적으로 현실에 대한 '사실적' 진술이었다. 그러한 진술이 마침 사실이었기 때문에, 그것은 실험에 의한 검증을 받을 필요가 없었다. 하지만 현대에는 현실과 사고 사이의 일치에 대한 믿음이 인간 이성의 범위에 대한 크게 과장된 개념에 기초하고 있다는 것을 처음으로 깨닫게 되었다. 논리적 진술(즉, 논리적 언어)이 정말 사실인지 (즉, 현실과 일치하는지) 알아내기 위해, 그 진술은 실험에서 경험적 현실과 비교하여 검증되어야 한다. 물리적 실험을 강조하는 것이 현대 과학의 특징이다. 이후 다시 이 접근법조차 사고의 중요성을 과대평가했다는 것을 깨달았다. 즉, 그 실험 행동은 어떤 행동과 마찬가지로 논리적 사고의 뒷받침이 필요했지만, 연구는 처음부터 실험이 이끌어야 했다.

Parks take the shape demanded by the cultural concerns of their time. Once parks are in place, they are no inert stage — their purposes and meanings are made and remade by planners and by park users. Moments of park creation are particularly telling, however, for they 1) **reveal/ hide** and actualize ideas about 2) **nature/ nurture** and its relationship to urban society. Indeed, 3) **that/ what** distinguishes a park from the broader category of public space is the representation of nature 4) **that/ what** parks are meant to embody. Public spaces 5) **include/ conclude** parks, concrete plazas, sidewalks, even indoor atriums. Parks typically 6) **have/ behave** trees, grass, and other plants as their central features. When 7) **entering/ entered** a city park, people often imagine a sharp separation from streets, cars, and buildings. There's a reason for that: traditionally, park designers attempted to 8) **create/ remove** such a feeling by planting tall trees at park boundaries, building stone walls, and constructing other 9) **mean/ means** of partition. What's behind this idea 10) **is/ are** not only landscape architects' desire to design aesthetically suggestive park spaces, but a 11) **much/ very** longer history of Western thought 12) **that/ what** envisions cities and nature as antithetical spaces and oppositional forces.

01

When we are in groups, we tend to feel 13) **that/ what** we, personally, aren't as responsible as we would be if we were 14) **acting/ acted** on our own. So the decisions that the group makes can easily become extreme. Occasionally, groups reach riskier decisions — they decide to take actions 15) **which/ what** are more challenging or 16) **safe/ unsafe** than they should be. Sometimes, though, they make choices that are too cautious. It's known 17) **for/ as** group polarization: a tendency towards extremes. A lot depends on how the discussions in the group develop. If one person 18) **advocating/ is advocating** a risky strategy early on, others may begin to think of even more challenging examples, and 19) **that/ what** leads the discussion towards reaching a riskier decision. But if someone 20) **advocates/ is advocated** more cautious approaches at an early stage, this too can 21) **influence/ be influenced** the direction of the discussion, 22) **result/ resulting** 23) **in/ from** a more cautious decision than the group members might have made individually.

02

Advertising in the United States is a relatively large and stable marketplace with a dollar volume of activity closely 24) **tried/ tied** to the overall health of the economy. The same is true of other mature industrialized nations, especially those of Western Europe. One significant difference, however, is the way commercial media evolved. In the United States, radio and television systems 25) **began/ beginning** as commercial ventures; in many other countries media were largely or completely government supported for years. Different models of commercial support 26) **is/ are** still evolving and the precise configurations 27) **vary/ various** by country. This evolution does not mean, however, 28) **that/ what** governments are uninvolved in steering the development of media. As Joseph Straubhaar observes, television systems are often "stubbornly national," 29) **which/ what** means advertisers must tailor "global" media plans to the regulatory policies and cultural expectations of individual countries.

03

Some people think that facts are the same as events, 30) **which/ what** they regard as the "objective," "hard core" elements of this universe. The main reason for thinking this is 31) **that/ what** events seem the best candidates to 32) **offer/ suffer** us a rock-solid foundation for our facts. True, events do happen or do not happen; you can neglect them but not 33) **deny/ delay** them. So by replacing facts with events, we might think we 34) **have been found/ have found** the strong objective foundation that we strive for. However, facts and events are concepts very 35) **difference/ different** from each other. Unlike facts, events are dated, tied to space and time, whereas facts are detached from space and time. It is even 36) **considering/ considered** a fact 37) **that/ which** certain events did not occur; it is a fact, for instance, 38) **that/ what** Darwin did not have a copy of Mendel's 1866 article in his collection. Apparently, a

fact is not the same as an event; the best we can say is 39) **that/ what** a fact is a description of an event, but not the event itself.

04

The extent to which decision making 40) **shared/ is shared** with subordinates or concentrated at the top of the hierarchy 41) **differs/ infers** across organizations. Thus, organizations can 42) **vary/ various** from strongly centralized decision-making practices to 43) **high/ highly** participatory decision-making practices. In participatory decision making, subordinates have 44) **much/ very** more input into how decisions are made. Research shows 45) **that/ what** greater participation in decision making improves employees' satisfaction with the decisions, but does not necessarily translate into better group performance. Therefore, research 46) **has been investigated/ has investigated** when participatory decision making is most 47) **useful/ useless**, and when it is less important. When the workers are 48) **high/ highly** educated, intelligent, and have 49) **considerate/ considerable** expertise in their areas, participatory decision making is more effective. Additionally, when the task at hand 50) **being/ is** highly complex and knowledge about local conditions is important to the decision, participatory decision making is important. Finally, in times of crisis, when the decisions have very strong impact, participatory decision making is 51) **useful/ useless**.

05

Insects attract collectors' attention 52) **because/ because of** they are extremely diverse and often bear spectacular colors. To biologists, however, bright coloration has been a constantly renewed puzzle 53) **because/ because of** it makes an insect a highly visible prey to prospective predators. Charles Darwin understood 54) **that/ what** bright colors or exaggerated forms could evolve via sexual selection, the process 55) **which/ by which** individuals 56) **compete/ complete** for access to mates and fertilization opportunities. However, he 57) **felt/ was felt** sexual selection could not account for the striking color pattern of nonreproductive larvae in, for example, Pseudosphinx hawk moth caterpillars. In a reply to Darwin about this puzzle, Alfred R. Wallace proposed 58) **that/ what** bright colors could advertise the distastefulness of the caterpillars to experienced predators. Indeed, prey 59) **that/ what** are not edible to predators are predicted to gain by exhibiting very recognizable colors; experienced predators can then correctly identify and subsequently avoid attacking such prey. E. B. Poulton 60) **later/ latter** developed this idea, expanded it to other warning signals (i.e., sounds or smells), and coined the term aposematism to 61) **describe/ be described** this phenomenon (from the Greek "away" and "sign").

06

In ancient and medieval times 62) **considerate/ considerable** respect was accorded to language by those working in the scientific field. According to the ancient metaphysical Weltanschauung, it 63) **believed/ was believed** 64) **that/ what** the structure of reality and of thought were so closely allied 65) **that/ what** they were interchangeable. A logical statement — not only a matter of thinking but also of linguistics — 66) **was/ were** automatically a true statement of reality. Since such a statement happened to be true, it did not need to be subjected to experimental testing. However, in modern times it was 67) **realizing/ realized** for the first time that trust in the accord between reality and thinking was based on a grossly exaggerated notion of the scope of human reason. In order to 68) **discover/ recover** 69) **that/ whether** a logical statement (i.e. the logical language) was really true (i.e. agreed with reality), the statement should be tested against empirical reality in an experiment. The emphasis on the physical experiment 70) **is/ are** characteristic of modern science. 71) **Later/ Latter** again it was realized that even this approach overrated the importance of thinking: from the outset research should be directed by experiments, 72) **although/ despite** that experimental action — like any action — required the support of logical thought.

Insects attract collectors' attention because they are extremely diverse and often bear spectacular colors. To biologists, however, bright coloration ① **has been** a constantly renewed puzzle because it ② **makes** an insect a highly visible prey to prospective predators. Charles Darwin understood that bright colors or exaggerated forms ③ **could evolve** via sexual selection, the process by which individuals compete for access to mates and fertilization opportunities. However, he ④ **was felt** sexual selection could not account for the striking color pattern of nonreproductive larvae in, for example, Pseudosphinx hawk moth caterpillars. In a reply to Darwin about this puzzle, Alfred R. Wallace proposed that _____ could advertise the distastefulness of the caterpillars to experienced predators. Indeed, prey that are not edible to predators ⑤ **are predicted** to gain by exhibiting very recognizable colors; experienced predators can then correctly identify and subsequently avoid attacking such prey. E. B. Poulton later developed this idea, expanded it to other warning signals (i.e., sounds or smells), and coined the term aposematism to describe this phenomenon (from the Greek "away" and "sign").

110) 윗글의 빈칸에 가장 적절한 답을 고르시오.

① the size ② bright colors ③ certain smells
④ the blindness ⑤ ability to fly

In ancient and medieval times considerable respect was accorded to _____ by those working in the scientific field. According to the ancient metaphysical Weltanschauung, it was believed ① **what** the structure of reality and of thought were so closely allied that they were interchangeable. A logical statement — not only a matter of thinking but also of linguistics — was ② **automatically** a true statement of reality. Since such a statement happened to be true, it did not need ③ **to be subjected** to experimental testing. However, in modern times it was realized for the first time that trust in the accord between reality and thinking ④ **was based** on a grossly exaggerated notion of the scope of human reason. In order to discover whether a logical statement (i.e. the logical language) was really true (i.e. agreed with reality), the statement should be tested against empirical reality in an experiment. The emphasis on the physical experiment is characteristic of modern science. Later again it was realized that even this approach ⑤ **overrated** the importance of thinking: from the outset research should be directed by experiments, although that experimental action — like any action — required the support of logical thought.

Parks take the shape demanded by the cultural concerns of their time. Once parks are in place, they are no inert stage — their purposes and meanings are made and remade by planners and by park users. Moments of park creation are particularly telling, however, for they reveal and actualize ideas about nature and its relationship to urban society. Indeed, (A) **that/ what** distinguishes a park from the broader category of public space is the representation of nature that parks are meant to embody. Public spaces include parks, concrete plazas, sidewalks, even indoor atriums. Parks typically have trees, grass, and other plants as their central features. When entering a city park, people often imagine a sharp separation from streets, cars, and buildings. There's a reason for that: traditionally, park designers attempted to (B) **create/ be created** such a feeling by planting tall trees at park boundaries, building stone walls, and constructing other means of partition. What's behind this idea is not only landscape architects' desire to design aesthetically suggestive park spaces, but a much longer history of Western thought (C) **that/ what** envisions cities and nature as antithetical spaces and oppositional forces.

01

114) 각 밑줄 (A), (B), (C) 에서 올바른 것을 고르시오.

When we are in groups, we tend to feel (A) **that/ what** we, personally, aren't as responsible as we would be if we were acting on our own. So the decisions that the group (B) **making/ makes** can easily become extreme. Occasionally, groups reach riskier decisions — they decide to take actions which are more challenging or unsafe than they should be. Sometimes, though, they make choices that are too _____. It's known as group polarization: a tendency towards extremes. A lot depends on how the discussions in the group develop. If one person is advocating a risky strategy early on, others may begin to think of even more challenging examples, and that leads the discussion towards reaching a riskier decision. But if someone advocates more cautious approaches at an early stage, this too can influence the direction of the discussion, (C) **result/ resulting** in a more cautious decision than the group members might have made individually.

115) 윗글의 빈칸에 가장 적절한 답을 고르시오.

① realistic ② redundant ③ habitual
④ minimal ⑤ cautious

02

116) 각 밑줄 (A), (B), (C) 에서 올바른 것을 고르시오.

Advertising in the United States are a relatively large and stable marketplace with a dollar volume of activity closely tied to the overall health of the economy. The same is true of other mature industrialized nations, especially those of Western Europe. One significant difference, however, is the way commercial media evolved. In the United States, radio and television systems began as commercial ventures; in many other countries media were largely or completely government (A) **supporting/ supported** for years. Different models of commercial support are still evolving and the precise configurations (B) **vary/ various** by country. This evolution does not mean, however, that governments are uninvolved in steering the development of media. As Joseph Straubhaar observes, television systems are often "stubbornly national," which (C) **means/ meaning** advertisers must tailor "global" media plans to the regulatory policies and cultural expectations of individual countries.

117) 위 밑줄에서 어법상 어긋난 부분을 찾아 고치시오.

03

118) 각 밑줄 (A), (B), (C) 에서 올바른 것을 고르시오.

Some people think that facts are the same as events, (A) **which/ what** they regard as the "objective," "hard core" elements of this universe. The main reason for thinking this is that events seem the best candidates to offer us a rock-solid foundation for our facts. True, events do happen or do not happen; you can _____ them but not deny them. So by replacing facts with events, we might think we (B) **have been found/ have found** the strong objective foundation that we strive for. However, facts and events are concepts very (C) **difference/ different** from each other. Unlike facts, events are dated, tied to space and time, whereas facts are detached from space and time. It is even considered a fact that certain events did not occur; it is a fact, for instance, that Darwin did not have a copy of Mendel's 1866 article in his collection. Apparently, a fact is not the same as an event; the best we can say is that a fact is a description of an event, but not the event itself.

119) 윗글의 빈칸에 가장 적절한 답을 고르시오.

① neglect ② threaten ③ demonstrate
④ domesticate ⑤ welcome

04

120) 각 밑줄 (A), (B), (C) 에서 올바른 것을 고르시오.

The extent to which decision making is shared with subordinates or concentrated at the top of the hierarchy (A) **differing/ differs** across organizations. Thus, organizations can vary from strongly centralized decision-making practices to highly participatory decision-making practices. In participatory decision making, subordinates have much more input into how decisions are made. Research shows that greater participation in decision making improves employees' satisfaction with the decisions, but does not necessarily translate into better group performance. Therefore, research (B) **has been investigated/ has investigated** when participatory decision making is most useful, and when it is less important. When the workers are (C) **high/ highly** educated, intelligent, and have considerable expertise in their areas, participatory decision making is more effective. Additionally, when the task _____ is highly complex and knowledge about local conditions is important to the decision, participatory decision making is important. Finally, in times of crisis, when the decisions have very strong impact, participatory decision making is useful.

121) 윗글의 빈칸에 가장 적절한 답을 고르시오.

① in surprise ② out of control ③ at ease
④ out of thin air ⑤ at hand
