UNIT 17 문단 요약하기

Gate W

A striving to demonstrate individual personality through designs should not be surprising. Most designers are educated to work as individuals, and design literature contains countless references to 'the designer'. Personal flair is without doubt an absolute necessity in some product categories, particularly relatively small objects, with a low degree of technological complexity, such as furniture, lighting, small appliances, and housewares. In larger-scale projects, however, even where a strong personality exercises powerful influence, the fact that substantial numbers of designers are employed in implementing a concept can easily be overlooked. The emphasis on individuality is therefore problematic — rather than actually designing, many *successful* designer 'personalities' function more as creative managers. A distinction needs to be made between designers working truly alone and those working in a group. In the ***latter*** case, management organization and processes can be equally as relevant as designers' creativity.

* strive: 애쓰다 ** flair: 재능

디자인을 통해 개인의 개성을 보여주기 위한 노력은 놀라운 것이 아닐 것이다. 대부분의 디자이너는 개인으로 일하도록 교육받고, 디자인 문헌은 '그 디자이너'에 대한 무수히 많은 언급을 담고 있다. 개인적인 재능이 일부 상품 범주에서는 절대적으로 필요한 것임에는 의심할 여지가 없는데, 가구, 조명, 소형 가전, 그리고 가정용품들과 같은, 낮은 단계의 기술적 복잡성을 가진 상대적으로 작은 물건들에서 특히 그렇다. 그러나, 더 큰 규모의 프로젝트에서, 심지어 강한 개성이 강력한 힘을 발휘하는 곳에서도, 상당한 수의 디자이너가 계획을 실행하는 데 참여한다는 사실이 쉽게 간과될 수 있다. 그러므로 개성에 대한 강조는 문제가 있는데, 많은 성공한 디자이너 '유명인사들'이 실제로 디자인을 하기보다는 창의적인 관리자로서의 기능을 더 많이 한다. 진정으로 혼자 일하는 디자이너와 집단을 이루어 일하는 디자이너는 구분되어야 한다. 후자의 경우, 관리 조직과 과정들이 디자이너들의 창의성 못지않게 똑같이 의미있을 수 있다.

[어휘 정리]

succeed ⓥ 성공하다, 계속하다 - success ⓝ 성공 / succession ⓝ 연속 successful ⓐ 성공적인 / successive ⓐ 연속적인

[어법 정리] 비교급

순서개념	late 늦은	later 더 늦은(나중에)	last 가장 늦은=마지막	참조: lately 부사 '최근에', lastly 부사 '끝으로'
시간개념	late 늦은	latter 나중의(후자)	latest 최신의	참조: late가 전치수식이면 '고인이 된' The late father was generous.

01

There are several theories about why older people experience “long-term” time compression so much more acutely than young people. It has been observed, for example, that for a twenty-year-old, ten years ***is*** half a lifetime, but for a fifty-year-old, the same span represents just 20 percent of one’s life. As we age, a decade becomes an ever-smaller proportion of our life experience. Others have emphasized the fact ***that***, in a ten-year span, younger people encounter more “turning points” than older people. In just ten years, a younger person is likely to graduate from college, woo and win a mate, start a family, and buy a house. Older people, in contrast, can easily pass a decade doing the same job and living in the same house with the same spouse. The absence of frequent life-changing events may partly explain why older people feel that the later decades seem to pass so quickly.

* compression: 압축 ** woo: 구애하다

노인들이 젊은 사람들보다 훨씬 더 "장기적" 시간 압축을 경험하는 이유에 대한 몇 가지 이론이 있습니다. 예를 들어, 20세에게는 10년이 인생의 절반이지만 50세에게는 같은 기간이 인생의 20퍼센트에 불과하다는 것이 관찰되었습니다. 나이가 들어감에 따라 10년은 우리 삶의 경험에서 차지하는 비중이 점점 작아집니다. 다른 사람들은 10년 동안 젊은 사람들이 노인들보다 더 많은 "전환점"을 만난다는 사실을 강조했습니다. 10년만 지나면 젊은 사람이 대학을 졸업하고, 구애를 하고 짝을 얻고, 가정을 꾸리고, 집을 살 가능성이 높습니다. 이와는 대조적으로 노인들은 같은 배우자와 같은 집에서 같은 일을 하면서 쉽게 10년을 보낼 수 있습니다. 삶을 변화시키는 사건이 자주 발생하지 않는다는 사실이 왜 노인들이 이후 수십 년이 그렇게 빨리 지나간다고 느끼는지 부분적으로 설명할 수 있습니다.

어법 정리 - 기간, 거리, 가격, 무게를 하나의 단위 개념으로 볼 때 : 단수 취급 (~단위는 ~하기에 ~하다.)

일반 복수 Two years **have passed** since then. 500 dollars **were paid** for the camera. - 일반적 문장에 적용

단위 단수 Two years **was** long to wait. 500 dollars **is** a large money to spend at once. - '~단위는'으로 해석될 때

어법 정리 - that 구분

동격 접속사 I know the fact **that** the team is called BTS. ① 앞에 동격인 명사 **있음** ② 뒤에 명사가 **생략되지 않음** (완전)

02

Social mobility is upward or downward movement in social position over time in a society. That movement can be specific to individuals who change social positions or to categories of people, such as racial or ethnic groups. Social mobility between generations ***is referred to as*** intergenerational mobility. The self-made myth suggests that social position in the United States is largely up to the individual, implying that mobility is quite common and easy to achieve for those who apply themselves. However, what people believe and what is fact are often not the same. A recent experimental study found that Americans substantially and consistently overestimate the amount of income mobility and educational access in society. The higher one's social class, the more likely they are to overestimate social mobility. In other words, wealthy Americans tend to subscribe to the belief that pulling oneself out of poverty is easier than it actually is and that one's wealth is a result of hard work and initiative, rather than luck or birth.

사회적 이동성은 사회에서 시간이 지남에 따라 사회적 지위상승 또는 하강 이동이다. 그 이동은 사회적 지위가 바뀌는 개인 또는 인종이나 민족 집단과 같은 부류의 사람들에 특유한 것일 수 있다. 세대 사이에서의 사회 이동은 세대 간 이동이라고 불린다. 자수성가에 관한 근거 없는 믿음은 미국에서는 사회적 지위가 주로 개인에 달려 있음을 시사하는데, 이는 열심히 노력하는 사람들에게 이동은 아주 흔하고 성취하기 쉬운 것임을 의미한다. 그러나 사람들이 믿는 것과 사실인 것은 흔히 같지 않다. 최근의 한 실험 연구는 미국인들이 사회에서의 소득 이동의 양과 교육 접근성을 상당히 그리고 일관되게 실제보다 더 높게 어림한다는 것을 발견했다. 사람들의 사회 계층이 더 높을수록 그들이 사회 이동을 실제보다 더 높게 어림할 가능성이 더 크다. 다시 말해, 부유한 미국인들은 자신이 가난에서 벗어나는 것이 실제로 그런 것보다 더 쉬우며, 사람들의 부는 운이나 출생보다는 근면과 진취성의 결과라는 믿음에 동의하는 경향이 있다.

어법 정리 - refer to A as B; A를 B라고 여기다.

People refer to the team as Avengers. [능동] = The team **is referred to as** Avengers. [수동] refer to만 수동으로 바꾸고, as~는 그대로 둔다.

03

In Ancient Greece, many private individuals believed in the powers of magic, such as farmers who were always dependent on the weather. Even though the use of magic was widespread in Ancient Greece, there remained an official caution over its use. We know that the Greek authorities believed that magic was an activity capable of results, but they grew concerned about those who practiced harmful magic. So it was established that those who practiced harmful magic could be punished by civic action. This may be the reason why magic in the classical world was held in low esteem and condemned by speakers and writers. Likewise, we find certain intellectuals realizing that the power of magic could be abused. For example, Plato believed that those who sold spells and curse tablets should be punished. Epicurean and Stoic philosophers also believed that magic should be eliminated. This mistrust of magic, along with religion and a separation of humans from the divine world, created a need to develop new methods of understanding the world. It is thus understandable that the Ancient Greeks created the foundations for philosophy.

* civic: 시민의 ** curse tablet: 저주 서판

고대 그리스에서는 항상 날씨에 의존하는 농부와 같은 많은 개인들이 마법의 힘을 믿었다. 고대 그리스에서 마법의 사용이 널리 퍼져 있었음에도 불구하고 마법의 사용에 대한 공식적인 경고가 존속하였다. 우리는 그리스 당국이 마법이 성과를 낼 수 있는 활동이라고 믿었지만 해로운 마법을 행하는 사람들에 대해 점차 걱정하게 되었음을 알고 있다. 그래서 해로운 마법을 행하는 사람들은 시민 행동에 의해 처벌될 수도 있다고 정해졌다. 이것이 바로 고대 그리스·로마 사회에서 마법이 웅변가들과 작가들에게 낮게 평가되고 비난받은 이유일 것이다. 마찬가지로, 우리는 특정 지식인들이 마법의 힘이 남용될 수 있다고 인식하고 있었음을 안다. 예를 들어, 플라톤은 주문(呪文)과 저주 서판을 파는 사람들은 처벌을 받아야 한다고 믿었다. 에피쿠로스학파와 스토아학파 철학자들도 마법은 없어져야 한다고 믿었다. 이러한 마법에 대한 불신은 종교와 신적인 세계로부터 인간을 분리하는 것과 함께 세상을 이해하는 새로운 방법을 개발할 필요를 만들어 냈다. 따라서 고대 그리스인들이 철학의 기초를 만든 것은 이해할 만하다.

04

The development psychologist Jerome Kagan measured changes in children's temperament between the ages of 4 months and 7 years. He classified several healthy 4-month-old infants as high reactors (easily excited or fearful) or low reactors (relaxed and unafraid), depending upon their responses to an unfamiliar stimulus. Kagan waved colorful mobiles in front of a baby, played a tape saying, "Hello baby, how are you doing today?" and popped a balloon behind the baby's head. High reactors moved around violently and cried, while low reactors rested or even laughed during the tests. By the time these infants were 4 years old, some of the high reactors were quite shy, subdued, and quiet, while others had moved toward the center of Kagan's "shy-bold" continuum. By the age of 7, only 15 percent of the initially low reactors were enthusiastic, fearless, and highly sociable kids, and the rest had moved closer to the center. None of the high reactors became fearless, and none of the low reactors became fearful; in other words, environment only moderately affected the final outcome.

* temperament: 기질 ** subdued: 차분해진

발달 심리학자 Jerome Kagan은 생후 4개월에서 7세 사이의 아이들의 기질 변화를 측정했다. 그는 몇 명의 생후 4개월 된 건강한 유아들을 낯선 자극에 대한 반응에 따라 (쉽게 흥분하거나 두려워하는) 고반응자 혹은 (느긋하고 두려워하지 않는) 저반응자로 분류했다. Kagan은 아기 앞에서 알록달록한 모빌을 흔들며, "안녕 아기야, 오늘 어떻게 지내고 있니"라는 내용의 테이프를 틀고, 아기 머리 뒤에서 풍선을 터뜨렸다. 고반응자는 격렬하게 움직이며 울었지만, 저반응자는 실험 중에 가만히 있거나 심지어 웃기도 했다. 이 유아들이 4살이 되었을 때, 고반응자들 중 일부는 상당히 수줍고, 차분하고, 조용했으며, 한편 또 다른 일부는 Kagan의 '수줍음과 대담함' 연속선의 중심 쪽으로 이동했다. 7살이 되었을 때, 초기 저반응자들 중 15퍼센트만이 열정적이고, 두려움이 없으며, 매우 사교적인 아이들이었고, 나머지는 중앙으로 더 가까이 이동했다. 고반응자들 중 아무도 겁이 없게 되지 않았고, 저반응자들 중 아무도 두려움을 갖게 되지 않았다. 다시 말해서, 환경은 최종 결과에 그저 어느 정도만 영향을 미쳤다.

A striving to demonstrate individual personality through designs should not be surprising. Most designers are educated to work as individuals, and design literature contains countless references to 'the designer'.

(A) A distinction needs to be made between designers working truly alone and those working in a group. In the latter case, management organization and processes can be equally as relevant as designers' creativity.

(B) Personal flair is without doubt an absolute necessity in some product categories, particularly relatively small objects, with a low degree of technological complexity, such as furniture, lighting, small appliances, and housewares.

(C) In larger-scale projects, however, even where a strong personality exercises powerful influence, the fact that substantial numbers of designers are employed in implementing a concept can easily be overlooked. The emphasis on individuality is therefore problematic — rather than actually designing, many successful designer 'personalities' function more as creative managers.

54) 윗글의 알맞은 순서를 배열하시오. [주관식]

55) 윗글의 요지로 가장 적절한 것을 고르시오.
① 디자이너는 창의적이야 한다.
② 디자이너는 계획 수립을 잘 한다.
③ 디자이너 특성을 구분해야 한다.
④ 집단에서 디자이너가 리더가 된다.
⑤ 혼자 일하는 디자이너는 고독하다.

01

There are several theories about why older people experience "long-term" time compression so much more acutely than young people.

(A) Older people, in contrast, can easily pass a decade doing the same job and living in the same house with the same spouse. The absence of frequent life-changing events may partly explain why older people feel that the later decades seem to pass so quickly.

(B) Others have emphasized the fact that, in a ten-year span, younger people encounter more "turning points" than older people. In just ten years, a younger person is likely to graduate from college, woo and win a mate, start a family, and buy a house.

(C) It has been observed, for example, that for a twenty-year-old, ten years is half a lifetime, but for a fifty-year-old, the same span represents just 20 percent of one's life. As we age, a decade becomes an ever-smaller proportion of our life experience.

56) 윗글의 알맞은 순서를 배열하시오. [주관식]

57) 윗글의 요지로 가장 적절한 것을 고르시오.
① 노인을 위한 복지가 필요하다.
② 삶에서 큰 인생의 전환이 필요하다.
③ 배우자와 오랜 시간을 보낼수록 좋다.
④ 젊은이들에게 시간은 소중하다.
⑤ 큰 변화가 적으면 시간이 빨리 느껴진다.

02

Social mobility is upward or downward movement in social position over time in a society. That movement can be specific to individuals who change social positions or to categories of people, such as racial or ethnic groups.

(A) However, what people believe and what is fact are often not the same. A recent experimental study found that Americans substantially and consistently overestimate the amount of income mobility and educational access in society. The higher one's social class, the more likely they are to overestimate social mobility.

(B) In other words, wealthy Americans tend to subscribe to the belief that pulling oneself out of poverty is easier than it actually is and that one's wealth is a result of hard work and initiative, rather than luck or birth.

(C) Social mobility between generations is referred to as intergenerational mobility. The self-made myth suggests that social position in the United States is largely up to the individual, implying that mobility is quite common and easy to achieve for those who apply themselves.

58) 윗글의 알맞은 순서를 배열하시오. [주관식]

In Ancient Greece, many private individuals believed in the powers of magic, such as farmers who were always dependent on the weather. Even though the use of magic was widespread in Ancient Greece, there remained an official caution over its use. We know that the Greek authorities believed that magic was an activity capable of results, but they grew concerned about those who practiced harmful magic.

(A) This mistrust of magic, along with religion and a separation of humans from the divine world, created a need to develop new methods of understanding the world. It is thus understandable that the Ancient Greeks created the foundations for philosophy.

(B) So it was established that those who practiced harmful magic could be punished by civic action. This may be the reason why magic in the classical world was held in low esteem and condemned by speakers and writers.

(C) Likewise, we find certain intellectuals realizing that the power of magic could be abused. For example, Plato believed that those who sold spells and curse tablets should be punished. Epicurean and Stoic philosophers also believed that magic should be eliminated.

60) 윗글의 알맞은 순서를 배열하시오. [주관식]

61) 윗글의 주제로 가장 적절한 것을 고르시오.
① escaping the curse ② understandable magic
③ the trust of magic ④ eliminated philosophy
⑤ from magic to philosophy

04

The development psychologist Jerome Kagan measured changes in children's temperament between the ages of 4 months and 7 years.

(A) He classified several healthy 4-month-old infants as high reactors (easily excited or fearful) or low reactors (relaxed and unafraid), depending upon their responses to an unfamiliar stimulus. Kagan waved colorful mobiles in front of a baby, played a tape saying, "Hello baby, how are you doing today?" and popped a balloon behind the baby's head. High reactors moved around violently and cried, while low reactors rested or even laughed during the tests.

(B) By the age of 7, only 15 percent of the initially low reactors were enthusiastic, fearless, and highly sociable kids, and the rest had moved closer to the center. None of the high reactors became fearless, and none of the low reactors became fearful; in other words, environment only moderately affected the final outcome.

(C) By the time these infants were 4 years old, some of the high reactors were quite shy, subdued, and quiet, while others had moved toward the center of Kagan's "shy-bold" continuum.

62) 윗글의 알맞은 순서를 배열하시오. [주관식]

63) 윗글의 주제로 가장 적절한 것을 고르시오.
① emotions of infants ② raising infants
③ becoming fearless ④ initially low reactors
⑤ nature over environment
