1. 다음 글의 밑줄 친 부분 중, 어법상 틀린 것은?[1)]

When we bemoan the lack of originality in the world, we blame it on the absence of creativity. If only people could generate more novel ideas, we'd all ① **be** better off. But in reality, the biggest barrier to originality is not idea generation — it's idea selection. In one analysis, when over two hundred people dreamed up more than a thousand ideas for new ventures and products, 87 percent ② **were** completely unique. Our companies, communities, and countries don't necessarily suffer from a shortage of novel ideas. They're ③ **constrained** by a shortage of people who excel at choosing the right novel ideas. The Segway, a two-wheeled, self-balancing personal transporter, ④ **was** a false positive: it ⑤ **was forecast** as a hit but turned out ⑥ **to be** a miss. Seinfeld, an American sitcom television series, was a false negative: it ⑦ **was expected** to fail but ultimately ⑧ **was flourished**.

2. 다음 글의 밑줄 친 부분 중, 어법상 틀린 것은?[2)]

A striking experiment ① **was performed** accidentally by Japanese anthropologists ② **attempting to relieve** an overpopulation and hunger problem in a community of monkeys on an island in south Japan. The anthropologists threw grains of wheat on a sandy beach. Now it is very difficult to separate wheat grains one by one from sand grains; such an effort might even expend more energy than ③ **eating** the collected wheat would provide. But one brilliant monkey, Imo, perhaps by accident or out of pique, ④ **threw** handfuls of the mixture into the water. Wheat floats; sand sinks, a fact that Imo clearly noted. Through the sifting process she was able to eat well. While older monkeys, ⑤ **set** in their ways, ⑥ **ignoring** her, the younger monkeys appeared ⑦ **to grasp** the importance of her discovery, and imitated it. In the next generation, the practice was more widespread; today all monkeys on the island ⑧ **are** competent at water sifting, an example of a cultural tradition among the monkeys.

The fact that a majority of the global population has at least some level of multilingual competence surely ① **indicates** that adding a second language is not a remarkable feat. And yet, especially within powerful linguistic groups, it is common to find references to the difficulties ② **involved** or to the peculiar lack of language talents supposedly ③ **possessed**. In the modern world, for example, English and American monolinguals often complain that they have no aptitude for foreign-language learning. This is usually ④ **accompanied** by expressions of envy for those multilingual Europeans, and sometimes (more subtly) by a linguistic smugness ⑤ **reflecting** a deeply held conviction that, after all, those clever "others" who don't already know English will have to accommodate in a world ⑥ **made** increasingly safe for anglophones. All such attitudes, of course, ⑦ **revealing** more about social dominance and convention than they ⑧ **do** about aptitude.

4. 다음 글의 밑줄 친 부분 중, 어법상 틀린 것은?[4)]

A gentleman came into my stress-management office and said, 'I'm mad at my boss. I don't like my job. I don't like the people ① **that** work with me. No one appreciates my work. I'm really angry.' When I began teaching him about ② **how** his own thinking creates his angry feelings he said, 'With all due respect, Dr. Carlson, I'm angry almost all the time, but I almost never think angry thoughts.' Do you see where he was ③ **being fooled**? Until that moment, he believed that 'thinking' meant the same thing as 'pondering.' Even though he may not ④ **have dwelled** on his misery for hours at a time, he was nevertheless continually thinking negatively, a moment here and a moment there. He spent nearly all of his time ⑤ **thinking** about the little things that irritated and annoyed him. It was almost as if the unstated goal of his life was to analyse it and ⑥ **gave** his opinions on how various things affected him. His negative thoughts were creating his negative feelings and emotions and he didn't even know he was thinking ⑦ **them**. He was a victim of his own thinking.

5. 다음 글의 밑줄 친 부분 중, 어법상 틀린 것은?[5)]

Caregivers for the old do much more than simply ① **perform** tasks. They provide intellectual engagement, social interaction, and emotional support, key factors in long-term health and longevity. As society has grown more urban and as family homes have become less multigenerational, greater numbers of the elderly now ② **live** alone. This shift ③ **brings** with it diminished opportunities for social interaction. In the United States, a 2010 American Association of Retired Persons study found that over a third of respondents age forty-five and older were lonely as ④ **measured** on the UCLA loneliness scale. Interactions with robots offer an opportunity ⑤ **to counteract**, if not entirely remedy, the effects of such social isolation. Brain scan studies ⑥ **using** fMRI have shown people have a measurable emotional response to robots similar to ⑦ **those measured** when ⑧ **interacting** with other people, at least in certain situations. While robots and technology can't entirely fill our need for social interaction, they may be able to provide some level of engagement.

6. 다음 글의 밑줄 친 부분 중, 어법상 틀린 것은?[6)]

How are films made and produced? A news item, an event, a novel or the biography of an important person might suggest suitable themes. The film director's first job is to write a short account of the subject and ① **to present** it for a producer. This simple, untechnical plan ② **is called** a treatment. Movie director Jean Renoir and his scriptwriter wrote unused treatments for La Grande Illusion. One of them ③ **is** easy to get hold of; it is quite different from the final film. If a producer and a group of actors ④ **are interested** in untechnical several the scheme, the director or the scriptwriter rewrites the text in order to give a full list of shots, ⑤ **described** in their order, with stage directions and technical terms clearly ⑥ **marked**; this is the scenario. There is a good scenario of October (Ten Days That Shook the World) ⑦ **written** by Eisenstein himself but, once again, it ⑧ **is far removed** from the three finished versions of the film we can see today. It is difficult to put into practice what ⑨ **was decided** beforehand, and important alterations ⑩ **are occurred** in the course of production.

7. 다음 글의 밑줄 친 부분 중, 어법상 틀린 것은?[7)]

Our present-day thinking ① **is based** on a succession of historically ② **evolved** mentalities; on mental edifices which previous generations have constructed, pulled down, renovated and extended. Past events ③ **are compressed** in images and metaphors which determine our present thinking even if we are not always aware of them. Common sense is the thickly viscous form of the past, the reflex of history which, like the story about a puppet and a chess-playing machine, always ④ **triumphing**. The puppet ⑤ **dressed** in Turkish garb was sitting in front of a chessboard on a large table. A cunning arrangement of mirrors created the impression of being able to see underneath the table. In actual fact, there was a dwarf ⑥ **sitting** underneath who was a chess master, and ⑦ **controlled** the puppet. We can imagine the continuous effect of historical experience ⑧ **acting** like an ugly, unloved and happily forgotten dwarf, ⑨ **moving** the pieces in the chess game of our everyday life.

8. 다음 글의 밑줄 친 부분 중, 어법상 틀린 것은?[8)]

The word "entertainment" derives from the Latin tenere, which means "to hold or keep steady, busy, or amused." The notion of making money by keeping an audience steady, busy, or amused remains central to ① **those** in the business of entertainment. Media practitioners, then, define entertainment as material that grabs the audience's attention and leaves agreeable feelings, as opposed to ② **challenge** their views of themselves and the world. However, this doesn't mean that people who work in the entertainment business always ③ **stay** away from informing or persuading. Many movies that ④ **are categorized** under "entertainment" by their production firms have been written and produced with the intention of making a political point (think of The Day After Tomorrow, Syriana, or Blood Diamond) or an educational point (like Schindler's List, Crash, or Letters from Iwo Jima). When media practitioners label a product as "entertainment," though, they are signaling to their audiences ⑤ **that** their primary concern should be with enjoyment, not with any other messages that may ⑥ **be included**.

9. 다음 글의 밑줄 친 부분 중, 어법상 틀린 것은?[9)]

Ritual is a set of catalytic messages, ① **effecting** transformation of state from one season of the year or one stage of the life cycle to ② **another**. State refers ③ **either** to a social and biological stage in life — adolescence or adulthood, for example — or to social status, such as graduate student or doctor of philosophy. Many vertebrate species — especially birds but fish and mammals, too — ④ **have** ritual. In these animals ritual ⑤ **is triggered** by certain messages or symbols in response to chemical messages from the genes. For example, among the three-spined stickleback fish, the male's zigzag courtship dance, whereby he entices a prospective mate to his nest, ⑥ **triggered** by the sight of her red belly, which is the signal that she is biologically ready to lay eggs. We assume, further, ⑦ **that** the form of the zigzag dance itself is genetically ⑧ **programmed** in the male's nervous system. In any case, the ritual effects his transformation into a parent that tends the eggs in his nest.

10. 다음 글의 밑줄 친 부분 중, 어법상 틀린 것은?[10)]

Post-traumatic stress syndrome became common knowledge but not the concept of post-traumatic growth, which is actually far more widespread. Most people who undergo influential trauma ultimately ① **feel** that the experience has made them stronger, wiser, more mature, more tolerant and understanding, or in some other way better people. The psychologist Martin Seligman has often lamented that so much attention ② **is lavished** on post-traumatic stress syndrome rather than post-traumatic growth because it causes people to mistakenly ③ **expecting** that bad events will have mainly negative effects. After ④ **being exposed** to a terrifying event, at least 80 percent of people do not experience post-traumatic stress syndrome. Even though a single bad event is more powerful than a good event, over time people ⑤ **respond** in so many constructive ways ⑥ **that** they typically emerge more capable than ever of confronting life's challenges. Bad can make us ⑦ **stronger** in the end.

11. 다음 글의 밑줄 친 부분 중, 어법상 틀린 것은?[11)]

There is a common misconception ① **that** the reason we have hunger is because the earth is straining ② **to feed** an ever-growing population. This is not the case. The world uses only about a third of its arable land for crop production. And even that third we use inefficiently. China, for instance, has dramatically higher crop yields per acre than the United States, primarily ③ **because of**, even though the two countries are comparable in size, China has three times the population of the United States and only one-sixth the arable land, so its population has to grow crops more efficiently. Planet earth is in fact ④ **such** a prodigious producer of food ⑤ **that** in the United States, enough food ⑥ **is thrown** away to keep all of the hungry people in the world ⑦ **fed**.

12. 다음 글의 밑줄 친 부분 중, 어법상 틀린 것은?[12)]

There is a saying ① **made famously** by the Nobel memorial prize-winning economist Milton Friedman ② **that** 'There's no such thing as a free lunch' — that we can't magic wealth out of nothing (say, by printing money) or shift costs into the ether. Friedman's view was ③ **that** if we legislate to reduce a burden on some citizens, or to increase the advantages they may enjoy, there will be repercussions somewhere down the line ④ **that** will involve a cost for others and might even ultimately mean the measure is counterproductive. So even if a meal ⑤ **is priced** at zero, someone, somewhere is paying for it. Modern economics may disparage the concept of free lunches, yet, today, one often gets a sense from key economists and policy-makers ⑥ **that** a free lunch isn't that far away. Economics aims ⑦ **to show** how we can generate growth by identifying more efficient ways of organising society, thereby ⑧ **making** us richer and, hopefully, happier, with the least amount of sacrifice on our part. Such a utopia is achievable, economists believe, because they understand the mechanisms ⑨ **that** drive everything from business investment and production decisions to consumer purchase choices, to individual attitudes to saving.

The notion of making money by keeping an audience steady, busy, or amused remains central to those in the business of entertainment. Media practitioners, then, define entertainment as material that grabs the audience's attention and leaves agreeable feelings, as opposed to challenging their views of themselves and the world. However, this doesn't mean that people who work in the entertainment business always stay away from informing or persuading. Many movies that are categorized under "entertainment" by their production firms have been written and produced with the intention of making a political point (think of The Day After Tomorrow, Syriana, or Blood Diamond) or an educational point (like Schindler's List, Crash, or Letters from Iwo Jima). When media practitioners label a product as "entertainment," though, they are signaling to their audiences that their primary concern should _____.

① not find an appropriate vehicle for self-disclosure
② overlook the importance of appropriate validation
③ come up with a pretty clear idea of what she wants
④ be with enjoyment, not with any other messages that may be included
⑤ never consider a mentor as another developmental tool

Ritual is a set of catalytic messages, effecting transformation of state from one season of the year or one stage of the life cycle to another. State refers either to a social and biological stage in life — adolescence or adulthood, for example — or to social status, such as graduate student or doctor of philosophy. Many vertebrate species — especially birds but fish and mammals, too — have ritual. In these animals ritual is triggered by certain messages or symbols in response to chemical messages from the genes. For example, among the three-spined stickleback fish, the male's zigzag courtship dance, whereby he entices a prospective mate to his nest, is triggered by the sight of her red belly, which is the signal that she is biologically ready to lay eggs. We assume, further, that the form of the zigzag dance itself is genetically programmed in the male's nervous system. In any case, the ritual effects his _____ into a parent that tends the eggs in his nest.

① diversity
② expertise
③ flexibility
④ transformation
⑤ compensation

33. 다음 글의 빈칸에 들어갈 말로 가장 적절한 것은?[33]

Post-traumatic stress syndrome became common knowledge but not the concept of post-traumatic growth, which is actually far more widespread. Most people who undergo influential trauma ultimately feel that the experience has made them stronger, wiser, more mature, more tolerant and understanding, or in some other way better people. The psychologist Martin Seligman has often lamented that so much attention is lavished on post-traumatic stress syndrome rather than post-traumatic growth because it causes people to mistakenly expect that bad events will have mainly negative effects. After being exposed to a terrifying event, at least 80 percent of people do not experience post-traumatic stress syndrome. Even though a single bad event is more powerful than a good event, over time people _____ that they typically emerge more capable than ever of confronting life's challenges. Bad can make us stronger in the end.

① consider the practical aspects of our lives
② respond in so many constructive ways
③ show consistency in making ethical decisions
④ follow rules that we have examined critically
⑤ draw up rules based on our basic commonalities

34. 다음 글의 빈칸에 들어갈 말로 가장 적절한 것은?[34]

There is a common misconception that the reason we have hunger is because the earth is straining to feed an ever-growing population. This is not the case. The world uses only about a third of its arable land for crop production. And even that third we use inefficiently. China, for instance, has dramatically higher crop yields per acre than the United States, primarily because, even though the two countries are comparable in size, China has three times the population of the United States and only one-sixth the arable land, so its population has to grow crops more efficiently. Planet earth is in fact _____ that in the United States, enough food is thrown away to keep all of the hungry people in the world fed.

① such a prodigious producer of food
② such a protection against group pressure
③ a tool to objectively assess their reality
④ a fair and balanced source of information
⑤ a democratic platform for expressing ideas

When we bemoan the lack of originality in the world, we blame it on the absence of creativity. If only people could generate more novel ideas, we'd all be better off. But in reality, the biggest barrier to originality is not idea generation — it's idea selection. In one analysis, when over two hundred people dreamed up more than a thousand ideas for new ventures and products, 87 percent were completely unique. Our companies, communities, and countries don't necessarily suffer from a shortage of novel ideas. They're constrained by a shortage of people who excel at choosing the right novel ideas. The Segway, a two-wheeled, self-balancing personal transporter, was a false positive: it was forecast as a hit but turned out to be a ____**(A)**____. Seinfeld, an American sitcom television series, was a false negative: it was expected to fail but ultimately ____**(B)**____.

	(A)	(B)
①	paradox	flourished
②	miss	perished
③	miss	flourished
④	gain	perished
⑤	gain	flourished

36. 다음 글의 빈칸에 들어갈 말로 가장 적절한 것은?[36]

Our present-day thinking is based on a succession of historically evolved mentalities; on mental edifices which previous generations have constructed, pulled down, renovated and extended. Past events are compressed in images and metaphors which _____ even if we are not always aware of them. Common sense is the thickly viscous form of the past, the reflex of history which, like the story about a puppet and a chess-playing machine, always triumphs. The puppet dressed in Turkish garb was sitting in front of a chessboard on a large table. A cunning arrangement of mirrors created the impression of being able to see underneath the table. In actual fact, there was a dwarf sitting underneath who was a chess master, and controlled the puppet. We can imagine the continuous effect of historical experience acting like an ugly, unloved and happily forgotten dwarf, moving the pieces in the chess game of our everyday life.

① determine our present thinking
② concentrate on our priorities
③ evolve creative genius
④ let down its sensory guard
⑤ have more chances to get to know us

37. 다음 글의 빈칸에 들어갈 말로 가장 적절한 것은?[37)]

The word "entertainment" derives from the Latin tenere, which means "to hold or keep steady, busy, or amused." The notion of making money by keeping an audience steady, busy, or amused remains central to those in the business of entertainment. Media practitioners, then, define entertainment as material that _____, as opposed to challenging their views of themselves and the world. However, this doesn't mean that people who work in the entertainment business always stay away from informing or persuading. Many movies that are categorized under "entertainment" by their production firms have been written and produced with the intention of making a political point (think of The Day After Tomorrow, Syriana, or Blood Diamond) or an educational point (like Schindler's List, Crash, or Letters from Iwo Jima). When media practitioners label a product as "entertainment," though, they are signaling to their audiences that their primary concern should be with enjoyment, not with any other messages that may be included.

① undermines the necessity of legal education
② grabs the audience's attention and leaves agreeable feelings
③ serves to fill the shortcomings of other disciplines
④ compensates for the lack of a purely intellectual one
⑤ paves the way for the success of other disciplines

There is a saying made famous by the Nobel memorial prize-winning economist Milton Friedman that '_____' — that we can't magic wealth out of nothing (say, by printing money) or shift costs into the ether. Friedman's view was that if we legislate to reduce a burden on some citizens, or to increase the advantages they may enjoy, there will be repercussions somewhere down the line that will involve a cost for others and might even ultimately mean the measure is counterproductive. So even if a meal is priced at zero, someone, somewhere is paying for it. Modern economics may disparage the concept of free lunches, yet, today, one often gets a sense from key economists and policy-makers that a free lunch isn't that far away. Economics aims to show how we can generate growth by identifying more efficient ways of organising society, thereby making us richer and, hopefully, happier, with the least amount of sacrifice on our part. Such a utopia is achievable, economists believe, because they understand the mechanisms that drive everything from business investment and production decisions to consumer purchase choices, to individual attitudes to saving.

① Power is dangerous if we abuse it
② Rights attach to groups as well as to individuals
③ There's no such thing as a free lunch
④ Freedom ends where other people's rights begin
⑤ The notion of human rights is historically different

The fact that a majority of the global population has at least some level of multilingual competence surely indicates that adding a second language is not a remarkable feat. And yet, especially within powerful linguistic groups, it is common to find references to the difficulties involved or to the peculiar lack of language talents supposedly possessed. In the modern world, for example, English and American monolinguals often complain that they have no aptitude for foreign-language learning. This is usually accompanied by expressions of envy for those multilingual Europeans, and sometimes (more subtly) by a linguistic smugness reflecting a deeply held conviction that, after all, those clever "others" who don't already know English will have to accommodate in a world made increasingly safe for anglophones. All such attitudes, of course, reveal more about social dominance and convention than they do about _____.

① aptitude
② attitude
③ altitude
④ latitude
⑤ longitude

A gentleman came into my stress-management office and said, 'I'm mad at my boss. I don't like my job. I don't like the people that work with me. No one appreciates my work. I'm really angry.' When I began teaching him about how his own thinking creates his angry feelings he said, 'With all due respect, Dr. Carlson, I'm angry almost all the time, but I almost never think angry thoughts.' Do you see where he was being fooled? Until that moment, he believed that 'thinking' meant the same thing as 'pondering.' Even though he may not have dwelled on his misery for hours at a time, he was nevertheless _____, a moment here and a moment there. He spent nearly all of his time thinking about the little things that irritated and annoyed him. It was almost as if the unstated goal of his life was to analyse it and to give his opinions on how various things affected him. His negative thoughts were creating his negative feelings and emotions and he didn't even know he was thinking them. He was a victim of his own thinking.

① living a goal-oriented life
② continually thinking negatively
③ focusing on the present moment
④ accepting a given situation as it is
⑤ jumping to a conclusion about a problem

But in reality, the biggest barrier to originality is not idea generation — it's idea selection.

When we bemoan the lack of originality in the world, we blame it on the absence of creativity. ① If only people could generate more novel ideas, we'd all be better off. ② In one analysis, when over two hundred people dreamed up more than a thousand ideas for new ventures and products, 87 percent were completely unique. ③ Our companies, communities, and countries don't necessarily suffer from a shortage of novel ideas. ④ They're constrained by a shortage of people who excel at choosing the right novel ideas. ⑤ The Segway, a two-wheeled, self-balancing personal transporter, was a false positive: it was forecast as a hit but turned out to be a miss. Seinfeld, an American sitcom television series, was a false negative: it was expected to fail but ultimately flourished.

63. 글의 흐름으로 보아, 주어진 문장이 들어가기에 가장 적절한 것은?[63]

But one brilliant monkey, Imo, perhaps by accident or out of pique, threw handfuls of the mixture into the water.

A striking experiment was performed accidentally by Japanese anthropologists attempting to relieve an overpopulation and hunger problem in a community of monkeys on an island in south Japan. The anthropologists threw grains of wheat on a sandy beach. ① Now it is very difficult to separate wheat grains one by one from sand grains; such an effort might even expend more energy than eating the collected wheat would provide. ② Wheat floats; sand sinks, a fact that Imo clearly noted. ③ Through the sifting process she was able to eat well. ④ While older monkeys, set in their ways, ignored her, the younger monkeys appeared to grasp the importance of her discovery, and imitated it. ⑤ In the next generation, the practice was more widespread; today all monkeys on the island are competent at water sifting, an example of a cultural tradition among the monkeys.

And yet, especially within powerful linguistic groups, it is common to find references to the difficulties involved or to the peculiar lack of language talents supposedly possessed.

① The fact that a majority of the global population has at least some level of multilingual competence surely indicates that adding a second language is not a remarkable feat. ② In the modern world, for example, English and American monolinguals often complain that they have no aptitude for foreign-language learning. ③ This is usually accompanied by expressions of envy for those multilingual Europeans, and sometimes (more subtly) by a linguistic smugness reflecting a deeply held conviction that, after all, those clever "others" who don't already know English will have to accommodate in a world made increasingly safe for anglophones. ④ All such attitudes, of course, reveal more about social dominance and convention than they do about aptitude. ⑤

65. 글의 흐름으로 보아, 주어진 문장이 들어가기에 가장 적절한 것은?[65]

This shift brings with it diminished opportunities for social interaction.

Caregivers for the old do much more than simply perform tasks. They provide intellectual engagement, social interaction, and emotional support, key factors in long-term health and longevity. ① As society has grown more urban and as family homes have become less multigenerational, greater numbers of the elderly now live alone. ② In the United States, a 2010 American Association of Retired Persons study found that over a third of respondents age forty-five and older were lonely as measured on the UCLA loneliness scale. ③ Interactions with robots offer an opportunity to counteract, if not entirely remedy, the effects of such social isolation. ④ Brain scan studies using fMRI have shown people have a measurable emotional response to robots similar to that measured when interacting with other people, at least in certain situations. ⑤ While robots and technology can't entirely fill our need for social interaction, they may be able to provide some level of engagement.

66. 글의 흐름으로 보아, 주어진 문장이 들어가기에 가장 적절한 것은?[66]

This simple, untechnical plan is called a treatment.

How are films made and produced? A news item, an event, a novel or the biography of an important person might suggest suitable themes. ① The film director's first job is to write a short account of the subject and to present it for a producer. ② Movie director Jean Renoir and his scriptwriter wrote unused treatments for La Grande Illusion. ③ One of them is easy to get hold of; it is quite different from the final film. ④ If a producer and a group of actors are interested in untechnical several the scheme, the director or the scriptwriter rewrites the text in order to give a full list of shots, described in their order, with stage directions and technical terms clearly marked; this is the scenario. ⑤ There is a good scenario of October (Ten Days That Shook the World) written by Eisenstein himself but, once again, it is far removed from the three finished versions of the film we can see today. It is difficult to put into practice what was decided beforehand, and important alterations occur in the course of production.

And even that third we use inefficiently.

There is a common misconception that the reason we have hunger is because the earth is straining to feed an ever-growing population. ① This is not the case. ② The world uses only about a third of its arable land for crop production. ③ China, for instance, has dramatically higher crop yields per acre than the United States, primarily because, even though the two countries are comparable in size, China has three times the population of the United States and only one-sixth the arable land, so its population has to grow crops more efficiently. ④ Planet earth is in fact such a prodigious producer of food that in the United States, enough food is thrown away to keep all of the hungry people in the world fed. ⑤

71. 글의 흐름으로 보아, 주어진 문장이 들어가기에 가장 적절한 것은?[71]

Modern economics may disparage the concept of free lunches, yet, today, one often gets a sense from key economists and policy-makers that a free lunch isn't that far away.

There is a saying made famous by the Nobel memorial prize-winning economist Milton Friedman that 'There's no such thing as a free lunch' — that we can't magic wealth out of nothing (say, by printing money) or shift costs into the ether. ① Friedman's view was that if we legislate to reduce a burden on some citizens, or to increase the advantages they may enjoy, there will be repercussions somewhere down the line that will involve a cost for others and might even ultimately mean the measure is counterproductive. ② So even if a meal is priced at zero, someone, somewhere is paying for it. ③ Economics aims to show how we can generate growth by identifying more efficient ways of organising society, thereby making us richer and, hopefully, happier, with the least amount of sacrifice on our part. ④ Such a utopia is achievable, economists believe, because they understand the mechanisms that drive everything from business investment and production decisions to consumer purchase choices, to individual attitudes to saving. ⑤

Post-traumatic stress syndrome became common knowledge but not the concept of post-traumatic growth, which is actually far more widespread.

(A) Even though a single bad event is more powerful than a good event, over time people respond in so many constructive ways that they typically emerge more capable than ever of confronting life's challenges. Bad can make us stronger in the end.

(B) Most people who undergo influential trauma ultimately feel that the experience has made them stronger, wiser, more mature, more tolerant and understanding, or in some other way better people.

(C) The psychologist Martin Seligman has often lamented that so much attention is lavished on post-traumatic stress syndrome rather than post-traumatic growth because it causes people to mistakenly expect that bad events will have mainly negative effects. After being exposed to a terrifying event, at least 80 percent of people do not experience post-traumatic stress syndrome.

There is a common misconception that the reason we have hunger is because the earth is straining to feed an ever-growing population.

(A) Planet earth is in fact such a prodigious producer of food that in the United States, enough food is thrown away to keep all of the hungry people in the world fed.

(B) This is not the case. The world uses only about a third of its arable land for crop production. And even that third we use inefficiently.

(C) China, for instance, has dramatically higher crop yields per acre than the United States, primarily because, even though the two countries are comparable in size, China has three times the population of the United States and only one-sixth the arable land, so its population has to grow crops more efficiently.

There is a saying made famous by the Nobel memorial prize-winning economist Milton Friedman that 'There's no such thing as a free lunch' — that we can't magic wealth out of nothing (say, by printing money) or shift costs into the ether.

(A) Economics aims to show how we can generate growth by identifying more efficient ways of organising society, thereby making us richer and, hopefully, happier, with the least amount of sacrifice on our part. Such a utopia is achievable, economists believe, because they understand the mechanisms that drive everything from business investment and production decisions to consumer purchase choices, to individual attitudes to saving.

(B) Friedman's view was that if we legislate to reduce a burden on some citizens, or to increase the advantages they may enjoy, there will be repercussions somewhere down the line that will involve a cost for others and might even ultimately mean the measure is counterproductive.

(C) So even if a meal is priced at zero, someone, somewhere is paying for it. Modern economics may disparage the concept of free lunches, yet, today, one often gets a sense from key economists and policy-makers that a free lunch isn't that far away.

When we bemoan the lack of originality in the world, we blame it on the absence of creativity. If only people could generate more novel ideas, we'd all **[be / have been]** better off. But in reality, the biggest barrier to originality is not idea generation — it's idea selection. In one analysis, when over two hundred people dreamed up more than a thousand ideas for new ventures and products, 87 percent **[was / were]** completely unique. Our companies, communities, and countries don't necessarily suffer from a shortage of novel ideas. They're **[constraining / constrained]** by a shortage of people who excel at choosing the right novel ideas. The Segway, a two-wheeled, self-balancing personal transporter, **[was / to be]** a false positive: it **[forecast / was forecast]** as a hit but turned out **[to be / being]** a miss. Seinfeld, an American sitcom television series, was a false negative: it **[expected / was expected]** to fail but ultimately **[flourished / was flourished]**.

97. 다음 글의 네모 안에서 문법상 맞는 말로 가장 적절한 것은?[서술형][97]

A striking experiment **[performed / was performed]** accidentally by Japanese anthropologists **[attempting / attempted]** **[relieving / to relieve]** an overpopulation and hunger problem in a community of monkeys on an island in south Japan. The anthropologists threw grains of wheat on a sandy beach. Now it is very difficult to separate wheat grains one by one from sand grains; **[so / such]** an effort might even expend more energy than **[eat / eating]** the **[collecting / collected]** wheat would provide. But one brilliant monkey, Imo, perhaps by accident or out of pique, **[throwing / threw]** handfuls of the mixture into the water. Wheat floats; sand sinks, a fact that Imo clearly noted. Through the sifting process she was able to eat well. While older monkeys, **[setting / set]** in their ways, **[ignoring / ignored]** her, the younger monkeys appeared **[to grasp / grasping]** the importance of her discovery, and **[imitate / imitated]** it. In the next generation, the practice was more widespread; today all monkeys on the island **[is / are]** competent at water sifting, an example of a cultural tradition among the monkeys.

The fact **[that / what]** a majority of the global population has at least some level of multilingual competence surely **[indicate / indicates]** **[that / what]** adding a second language is not a remarkable feat. And yet, especially within powerful linguistic groups, it is common to find references to the difficulties **[to involve / involved]** or to the peculiar lack of language talents supposedly **[possessing / possessed]**. In the modern world, for example, English and American monolinguals often complain **[that / what]** they have no aptitude for foreign-language learning. This is usually **[accompanying / accompanied]** by expressions of envy for those multilingual Europeans, and sometimes (more subtly) by a linguistic smugness **[reflecting / reflected]** a deeply held conviction **[that / what]**, after all, those clever "others" who don't already know English will have to accommodate in a world **[is made / made]** increasingly safe for anglophones. All such attitudes, of course, **[reveal / revealing]** more about social dominance and convention than they **[are / do]** about aptitude.

99. 다음 글의 네모 안에서 문법상 맞는 말로 가장 적절한 것은?[서술형][99]

A gentleman came into my stress-management office and said, 'I'm mad at my boss. I don't like my job. I don't like the people **[that / what]** work with me. No one appreciates my work. I'm really angry.' When I began teaching him about **[what / how]** his own thinking creates his angry feelings he said, 'With all due respect, Dr. Carlson, I'm angry almost all the time, but I almost never think angry thoughts.' Do you see where he was **[fooling / being fooled]**? Until that moment, he believed **[that / what]** 'thinking' meant the same thing as 'pondering.' Even though he may not **[dwell / have dwelled]** on his misery for hours at a time, he was nevertheless continually **[thinking / thought]** negatively, a moment here and a moment there. He spent nearly all of his time **[to think / thinking]** about the little things **[that / what]** irritated and annoyed him. It was almost as if the unstated goal of his life was to analyse it and **[gave / to give]** his opinions on how various things affected him. His negative thoughts were creating his negative feelings and emotions and he didn't even know he was thinking **[it / them]**. He was a victim of his own thinking.

100. 다음 글의 네모 안에서 문법상 맞는 말로 가장 적절한 것은?[서술형]100)

Caregivers for the old do much more than simply **[perform / performing]** tasks. They provide intellectual engagement, social interaction, and emotional support, key factors in long-term health and longevity. As society has grown more urban and as family homes have become less multigenerational, greater numbers of the elderly now **[live / lives]** alone. This shift **[brings / is brought]** with it **[diminishing / diminished]** opportunities for social interaction. In the United States, a 2010 American Association of Retired Persons study found **[that / what]** over a third of respondents age forty-five and older **[was / were]** lonely as **[measuring / measured]** on the UCLA loneliness scale. Interactions with robots offer an opportunity **[to counteract / counteract]**, if not entirely remedy, the effects of such social isolation. Brain scan studies **[using / used]** fMRI **[has / have]** shown people have a measurable emotional response to robots similar to **[that / what]** **[measuring / measured]** when **[interacting / interacted]** with other people, at least in certain situations. While robots and technology can't entirely fill our need for social interaction, they may be able to provide some level of engagement.

101. 다음 글의 네모 안에서 문법상 맞는 말로 가장 적절한 것은?[서술형]101)

How are films made and produced? A news item, an event, a novel or the biography of an important person might suggest suitable themes. The film director's first job is to write a short account of the subject and **[presents / to present]** it for a producer. This simple, untechnical plan **[calls / is called]** a treatment. Movie director Jean Renoir and his scriptwriter wrote unused treatments for La Grande Illusion. One of them **[is / are]** easy to get hold of; it is quite different from the final film. If a producer and a group of actors **[are interested / are interesting]** in untechnical several the scheme, the director or the scriptwriter rewrites the text in order to give a full list of shots, **[described are described]** in their order, with stage directions and technical terms clearly **[marking / marked]**; this is the scenario. There is a good scenario of October (Ten Days That Shook the World) **[writing / written]** by Eisenstein himself but, once again, it **[far removes / is far removed]** from the three finished versions of the film we can see today. It is difficult to put into practice what **[decided / was decided]** beforehand, and important alterations **[occur / occurs]** in the course of production.

102. 다음 글의 네모 안에서 문법상 맞는 말로 가장 적절한 것은?[서술형]102)

Our present-day thinking **[is based / based]** on a succession of historically **[evolving / evolved]** mentalities; on mental edifices which previous generations have constructed, pulled down, renovated and extended. Past events **[compresse / are compressed]** in images and metaphors which determine our present thinking even if we are not always aware of **[it / them]**. Common sense is the thickly viscous form of the past, the reflex of history which, **[like / alike]** the story about a puppet and a chess-playing machine, always **[triumphing / triumphs]**. The puppet **[dressed / was dressed]** in Turkish garb was sitting in front of a chessboard on a large table. A cunning arrangement of mirrors created the impression of being able to see underneath the table. In actual fact, there was a dwarf **[sitting / seating]** underneath who was a chess master, and **[controlling / controlled]** the puppet. We can imagine the continuous effect of historical experience **[acting / acted]** like an ugly, unloved and happily forgotten dwarf, **[moving / moved]** the pieces in the chess game of our everyday life.

103. 다음 글의 네모 안에서 문법상 맞는 말로 가장 적절한 것은?[서술형]103)

The word "entertainment" derives from the Latin tenere, which means "to hold or keep steady, busy, or amused." The notion of making money by keeping an audience steady, busy, or amused **[remain / remains]** **[central / centrally]** to **[that / those]** in the business of entertainment. Media practitioners, then, **[defining / define]** entertainment as material **[that / what]** grabs the audience's attention and **[leave / leaves]** agreeable feelings, as opposed to **[challenging / challenged]** their views of **[them / themselves]** and the world. However, this doesn't mean **[that / what]** people who work in the entertainment business always **[stay / staying]** away from informing or persuading. Many movies that **[categorize / are categorized]** under "entertainment" by their production firms **[have written / have been written]** and produced with the intention of making a political point (think of The Day After Tomorrow, Syriana, or Blood Diamond) or an educational point (like Schindler's List, Crash, or Letters from Iwo Jima). When media practitioners label a product as "entertainment," though, they are signaling to their audiences **[that / what]** their primary concern should be with enjoyment, not with any other messages that may **[include / be included]**.

104. 다음 글의 네모 안에서 문법상 맞는 말로 가장 적절한 것은?[서술형]104)

Ritual is a set of catalytic messages, **[effecting / effected]** transformation of state from one season of the year or one stage of the life cycle to **[another / other]**. State refers **[both / either]** to a social and biological stage in life — adolescence or adulthood, for example — or to social status, such as graduate student or doctor of philosophy. Many vertebrate species — especially birds but fish and mammals, too — **[have / has]** ritual. In these animals ritual **[is triggered / triggered]** by certain messages or symbols in response to chemical messages from the genes. For example, among the three-spined stickleback fish, the male's zigzag courtship dance, whereby he entices a prospective mate to his nest, **[is triggered / triggered]** by the sight of her red belly, which is the signal **[that / what]** she is biologically ready to lay eggs. We assume, further, **[that / what]** the form of the zigzag dance itself is genetically **[programming / programmed]** in the male's nervous system. In any case, the ritual effects his transformation into a parent **[that / what]** tends the eggs in his nest.

166. 위 글을 요약하고자 한다. 다음 빈칸(A), (B)에 들어갈 말로 가장 적절한 것은?[166]

An influential language group **(A)**_____ to be smug about **(B)**_____ about language proficiency.

	(A)	(B)
①	contends	satisfaction
②	fails	complaints
③	fails	satisfaction
④	pretends	complaints
⑤	pretends	satisfaction

다음 글을 읽고 물음에 답하시오.

A gentleman came into my stress-management office and said, 'I'm mad at my boss. I don't like my job. I don't like the people **(A)that** work with me. No one appreciates my work. I'm really angry.' When I began teaching him about **(B)what** his own thinking creates his angry feelings he said, 'With all due respect, Dr. Carlson, I'm angry almost all the time, but I almost never think angry thoughts.' Do you see where he was **(C)fool**? Until that moment, he believed that '**(D)**_____' meant the same thing as '**(E)**_____.' Even though he may not **(F)dwell** on his misery for hours at a time, he was nevertheless continually thinking negatively, **(G)a moment here and a moment there**. **(H)**그는 자신의 거의 모든 시간을 자신을 짜증나고 성가시게 하는 사소한 것들에 대해 생각하는 데 썼다. It was almost as if the unstated goal of his life was to analyse **(I)it** and **(J)give** his opinions on how various things affected him. His negative thoughts were creating his negative feelings and emotions and he didn't even know he was thinking **(K)them**. He was a victim of his own **(L)**_____.

167. 위 글의 밑줄 친 (A)부분을 문법상 옳은 표현으로 고쳐 적으시오.[서술형][옳은 표현이면 그대로 적으시오.]167)

168. 위 글의 밑줄 친 (B)부분을 문법상 옳은 표현으로 고쳐 적으시오.[서술형][옳은 표현이면 그대로 적으시오.]168)

169. 위 글의 밑줄 친 (C)부분을 문법상 옳은 표현으로 고쳐 적으시오.[서술형][옳은 표현이면 그대로 적으시오.]169)

170. 위 글의 빈칸 (D)부분에 들어갈 말을 적으시오.[서술형]170)

①	Prospective	current
②	Prospective	past
③	Prospective	future
④	Present	past
⑤	Present	future

다음 글을 읽고 물음에 답하시오.

The word "entertainment" derives from the Latin tenere, which means "to hold or keep steady, busy, or amused." The notion of making money by keeping an audience steady, busy, or amused **(A)remain** **(B)[central / trivial]** to **(C)those** in the business of entertainment. Media practitioners, then, define entertainment as material that grabs the audience's attention and leaves **(D)[agreeable / probable]** feelings, as opposed to **(E)challenge** their views of **(F)themselves** and the world. However, **(G)this** doesn't mean that people who work in the entertainment business always **(H)[come close to / stay away from]** informing or persuading. Many movies that **(I)categorize** under "entertainment" by their production firms have been written and produced with the **(J)[contention / intention]** of making a political point (think of The Day After Tomorrow, Syriana, or Blood Diamond) or an educational point (like Schindler's List, Crash, or Letters from Iwo Jima). When media practitioners label a product as "entertainment," though, **(K)they** are signaling to their audiences that **(L)their** primary concern should be with **(M)[enjoyment / settlement]**, not with any other messages that may **(N)include**.

When we bemoan the lack of originality in the world, we blame it on the absence of creativity. If only people could generate more novel ideas, we'd all be better off. But in reality, _____ — it's idea selection. In one analysis, when over two hundred people dreamed up more than a thousand ideas for new ventures and products, 87 percent were completely unique. Our companies, communities, and countries don't necessarily suffer from a shortage of novel ideas. They're constrained by a shortage of people who excel at choosing the right novel ideas. The Segway, a two-wheeled, self-balancing personal transporter, was a false positive: it was forecast as a hit but turned out to be a miss. Seinfeld, an American sitcom television series, was a false negative: it was expected to fail but ultimately flourished.

A striking experiment was performed accidentally by Japanese anthropologists attempting to relieve an overpopulation and hunger problem in a community of monkeys on an island in south Japan. The anthropologists threw grains of wheat on a sandy beach. Now it is very difficult to separate wheat grains one by one from sand grains; such an effort might even expend more energy than eating the collected wheat would provide. But one brilliant monkey, Imo, perhaps by accident or out of pique, threw handfuls of the mixture into the water. Wheat floats; sand sinks, a fact that Imo clearly noted. Through the sifting process she was able to eat well. While older monkeys, set in their ways, ignored her, the younger monkeys appeared to grasp the importance of her discovery, and imitated it. In the next generation, the practice was more widespread; today all monkeys on the island are competent at water sifting, _____.

The fact that a majority of the global population has at least some level of multilingual competence surely indicates that adding a second language is not a remarkable feat. And yet, especially within powerful linguistic groups, it is common to find references to the difficulties involved or to the peculiar lack of language talents supposedly possessed. In the modern world, for example, English and American monolinguals often complain that they have no aptitude for foreign-language learning. This is usually accompanied by expressions of envy for those multilingual Europeans, and sometimes (more subtly) by a linguistic smugness reflecting a deeply held conviction that, after all, those clever "others" who don't already know English will have to accommodate in a world made increasingly safe for anglophones. All such attitudes, of course, _____.

A gentleman came into my stress-management office and said, 'I'm mad at my boss. I don't like my job. I don't like the people that work with me. No one appreciates my work. I'm really angry.' When I began teaching him about how his own thinking creates his angry feelings he said, 'With all due respect, Dr. Carlson, I'm angry almost all the time, but I almost never think angry thoughts.' Do you see where he was being fooled? Until that moment, he believed that 'thinking' meant the same thing as 'pondering.' Even though he may not have dwelled on his misery for hours at a time, he was nevertheless continually thinking negatively, a moment here and a moment there. He spent nearly all of his time thinking about the little things that irritated and annoyed him. It was almost as if the unstated goal of his life was to analyse it and to give his opinions on how various things affected him. His negative thoughts were creating his negative feelings and emotions and he didn't even know he was thinking them. _____.

331. 다음 빈칸에 들어갈 말을 주어진 〈조건〉에 맞게 영어로 쓰시오.331)

Caregivers for the old do much more than simply perform tasks. They provide intellectual engagement, social interaction, and emotional support, key factors in long-term health and longevity. As society has grown more urban and as family homes have become less multigenerational, greater numbers of the elderly now live alone. This shift brings with it diminished opportunities for social interaction. In the United States, a 2010 American Association of Retired Persons study found that over a third of respondents age forty-five and older were lonely as measured on the UCLA loneliness scale. Interactions with robots offer an opportunity to counteract, if not entirely remedy, the effects of such social isolation. Brain scan studies using fMRI have shown people have a measurable emotional response to robots similar to that measured when interacting with other people, at least in certain situations. While _____, they may be able to provide some level of engagement.

332. 다음 빈칸에 들어갈 말을 주어진 〈조건〉에 맞게 영어로 쓰시오.332)

How are films made and produced? A news item, an event, a novel or the biography of an important person might suggest suitable themes. The film director's first job is to write a short account of the subject and to present it for a producer. This simple, untechnical plan is called a treatment. Movie director Jean Renoir and his scriptwriter wrote unused treatments for La Grande Illusion. One of them is easy to get hold of; it is quite different from the final film. If a producer and a group of actors are interested in untechnical several the scheme, the director or the scriptwriter rewrites the text in order to give a full list of shots, described in their order, with stage directions and technical terms clearly marked; this is the scenario. There is a good scenario of October (Ten Days That Shook the World) written by Eisenstein himself but, once again, it is far removed from the three finished versions of the film we can see today. It is difficult to put into practice what was decided beforehand, and _____.

The word "entertainment" derives from the Latin tenere, which means "to hold or keep steady, busy, or amused." The notion of making money by keeping an audience steady, busy, or amused remains central to those in the business of entertainment. Media practitioners, then, define entertainment as material that grabs the audience's attention and leaves agreeable feelings, _____. However, this doesn't mean that people who work in the entertainment business always stay away from informing or persuading. Many movies that are categorized under "entertainment" by their production firms have been written and produced with the intention of making a political point (think of The Day After Tomorrow, Syriana, or Blood Diamond) or an educational point (like Schindler's List, Crash, or Letters from Iwo Jima). When media practitioners label a product as "entertainment," though, they are signaling to their audiences that their primary concern should be with enjoyment, not with any other messages that may be included.

_____, effecting transformation of state from one season of the year or one stage of the life cycle to another. State refers either to a social and biological stage in life — adolescence or adulthood, for example — or to social status, such as graduate student or doctor of philosophy. Many vertebrate species — especially birds but fish and mammals, too — have ritual. In these animals ritual is triggered by certain messages or symbols in response to chemical messages from the genes. For example, among the three-spined stickleback fish, the male's zigzag courtship dance, whereby he entices a prospective mate to his nest, is triggered by the sight of her red belly, which is the signal that she is biologically ready to lay eggs. We assume, further, that the form of the zigzag dance itself is genetically programmed in the male's nervous system. In any case, the ritual effects his transformation into a parent that tends the eggs in his nest.

Media practitioners, then, define entertainment as material that grabs the audience's attention and leaves ② **pleasurable** feelings, as opposed to challenging their views of themselves and the world. However, this doesn't mean that people who work in the entertainment business always ③ **take interest in** informing or persuading. Many movies that are categorized under "entertainment" by their production firms have been written and produced with the ④ **intention** of making a political point (think of The Day After Tomorrow, Syriana, or Blood Diamond) or an educational point (like Schindler's List, Crash, or Letters from Iwo Jima). When media practitioners label a product as "entertainment," though, they are signaling to their audiences that their primary concern should be with ⑤ **enjoyment**, not with any other messages that may be included.

Ritual is a set of catalytic messages, effecting ① **variation** of state from one season of the year or one stage of the life cycle to another. State refers either to a social and biological stage in life — adolescence or adulthood, for example — or to ② **social statue**, such as graduate student or doctor of philosophy. Many vertebrate species — especially birds but fish and mammals, too — have ritual. In these animals ritual is ③ **brought about** by certain messages or symbols in response to chemical messages from the genes. For example, among the three-spined stickleback fish, the male's zigzag courtship dance, whereby he ④ **lures** a prospective mate to his nest, is triggered by the sight of her red belly, which is the signal that she is ⑤ **biologically** ready to lay eggs. We assume, further, that the form of the zigzag dance itself is ⑥ **genetically** programmed in the male's nervous system. In any case, the ritual effects his transformation into a parent that ⑦ **tends** the eggs in his nest.

347. 다음 글의 밑줄 친 부분 중, 문맥상 낱말의 쓰임이 적절하지 않은 것은?[347)]

Post-traumatic stress syndrome became common knowledge but not the concept of post-traumatic growth, which is actually far ① **more widespread**. Most people who ② **go through** influential trauma ultimately feel that the experience has made them stronger, wiser, more mature, more tolerant and understanding, or in some other way ③ **better** people. The psychologist Martin Seligman has often lamented that so much attention is ④ **lavished** on post-traumatic stress syndrome rather than post-traumatic growth because it causes people to ⑤ **mistakenly** expect that bad events will have mainly negative effects. After being exposed to a ⑥ **terrifying** event, at least 80 percent of people do not experience post-traumatic stress syndrome. Even though a single bad event is more powerful than a good event, over time people respond in so many ⑦ **helpful** ways that they typically emerge ⑧ **less capable** than ever of confronting life's challenges. Bad can make us stronger in the end.

348. 다음 글의 밑줄 친 부분 중, 문맥상 낱말의 쓰임이 적절하지 않은 것은?[348)]

There is a common misconception that the reason we have hunger is because the earth is ① **straining** to feed an ever-growing population. This is not the case. The world uses only about a third of its arable land for crop production. And even that third we use ② **inefficiently**. China, for instance, has dramatically ③ **higher** crop yields per acre than the United States, primarily because, even though the two countries are ④ **equivalent** in size, China has three times the population of the United States and only one-sixth the arable land, so its population has to grow crops ⑤ **more efficiently**. Planet earth is in fact such a ⑥ **enormous** producer of food that in the United States, enough food is ⑦ **saved up** to keep all of the hungry people in the world fed.

349. 다음 글의 밑줄 친 부분 중, 문맥상 낱말의 쓰임이 적절하지 않은 것은?[349)]

There is a saying made famous by the Nobel memorial prize-winning economist Milton Friedman that 'There's no such thing as a free lunch' — that we can't magic wealth out of ① **nothing** (say, by printing money) or shift costs into the ② **ether**. Friedman's view was that if we legislate to reduce a burden on some citizens, or to increase the advantages they may enjoy, there will be ③ **consequences** somewhere down the line that will involve a cost for others and might even ultimately mean the measure is ④ **counterproductive**. So even if a meal is priced at zero, someone, somewhere is paying for it. Modern economics may ⑤ **downgrade** the concept of free lunches, yet, today, one often gets a sense from key economists and policy-makers that a free lunch isn't that far away. Economics aims to show how we can generate growth by identifying ⑥ **more efficient** ways of organising society, thereby making us richer and, hopefully, happier, with the ⑦ **most** amount of sacrifice on our part. Such a utopia is ⑧ **attainable**, economists believe, because they understand the mechanisms that drive everything from business investment and production decisions to consumer purchase choices, to individual attitudes to saving.

정답

1) ⑧ flourished
2) ⑥ ignored
3) ⑦ reveal
4) ⑥ to give
5) ⑦ that measured
6) ⑩ occur
7) ④ triumphs
8) ② challenging
9) ⑥ is triggered
10) ③ expect
11) ③ because
12) ① made famous
13) ⑦ choosing
14) ⑥ imitated
15) ④ no aptitude
16) ⑥ similar to
17) ⑤ untechnical
18) ⑥ continuous
19) ③ stay away from
20) ④ entices
21) ⑦ constructive
22) ⑤ more efficiently
23) ⑧ achievable
