By the early 1990s, the decline of the southwestern willow flycatcher was clear. In 1993, the U.S. Fish and Wildlife Service (FWS) formally proposed ① **listing** the flycatcher as a federal endangered species and ② **designating** critical habitat, an important step under the Endangered Species Act that prevents damage to specific areas. The task of writing the rule that listed the bird as endangered under the act ③ **falling** to Rob Marshall. Marshall, a Yale-trained biologist with FWS in Arizona, ④ **was** becoming disillusioned by the overall implementation of the Endangered Species Act. The FWS was ⑤ **highly** politicized by powerful, moneyed interests that saw species listings and particularly habitat designations as a threat to business: if a species ⑥ **is listed** but no critical habitat is designated, a now-common pattern, then restrictions on business ⑦ **are** far fewer. This created an atmosphere ⑧ **in which** it was extremely difficult for technical biological staff to maintain their integrity, says Marshall. For example, the process to list the flycatcher as endangered began in 1992, the proposed rule didn't come out until 1995, and it took until 1997 ⑨ **to produce** the final ruling to list it. The FWS only completed the listing because the watchdog organization Center for Biological Diversity sued them.

Translating theory into something that can be assessed in the physical environment means that phenomena are made ① **measurable**. It is often assumed that the phenomenon ② **being measured is** the same ③ **no matter how** it is measured. Translations of theory into practice may differ, but these do not alter the nature of the phenomenon being measured. Without this assumption, measurement between different individuals ④ **made** in different places or at different times could not ⑤ **be compared**. The assumption does not, however, mean that this viewpoint is correct. Within quantum physics there is a view ⑥ **which** the observer and the phenomenon cannot be separated. The observer and phenomenon make up a single system, a measurement system. In this context it is not possible to separate the measurement ⑦ **made** from the measurement system ⑧ **within which** it was made. The measurement and the phenomenon become ⑨ **combined** in an unbreakable link in the measurement system. It is impossible to talk of a separate existence for the phenomenon and so also, therefore, ⑩ **to talk** of an independent measurement of that phenomenon. This means that within the supposedly objective, hard science of physics, it is accepted that reality and how it is measured ⑪ **form** an inseparable whole.

4. 다음 글의 밑줄 친 부분 중, 어법상 틀린 것은?[4)]

Why are certain languages mistakenly ① **thought** to be primitive? There are several reasons. Some people consider other languages ② **ugly** or "primitive sounding" if those languages make use of sounds or sound combinations they find ③ **unclear** because the sounds are greatly different from ④ **those** of the languages they themselves speak. Such a view is based on the ethnocentric attitude ⑤ **that** the characteristics of one's own language are obviously superior. But words that seem ⑥ **unpronounceable** to speakers of one language — and are therefore ⑦ **considered** obscure or even grotesque — ⑧ **easily acquired** by even the youngest native speakers of the language ⑨ **in which** they occur. To a native speaker of English, the Czech word scvrnkls "you flicked off (something) with your finger" looks quite ⑩ **strange**, and its pronunciation may sound odd and even impossible because there is no vowel among the eight consonants; for native speakers of Czech, of course, scvrnkls is just another word. Which speech sounds are used and how they ⑪ **are combined** to form words and utterances ⑫ **vary** from one language to the next, and speakers of no language can claim ⑬ **that** their language has done the selecting and combining better than ⑭ **another**.

The assumption does not, however, mean that this viewpoint is correct.

Translating theory into something that can be assessed in the physical environment means that phenomena are made measurable. It is often assumed that the phenomenon being measured is the same no matter how it is measured. ① Translations of theory into practice may differ, but these do not alter the nature of the phenomenon being measured. ② Without this assumption, measurement between different individuals made in different places or at different times could not be compared. ③ Within quantum physics there is a view that the observer and the phenomenon cannot be separated. ④ The observer and phenomenon make up a single system, a measurement system. ⑤ In this context it is not possible to separate the measurement made from the measurement system within which it was made. The measurement and the phenomenon become combined in an unbreakable link in the measurement system. It is impossible to talk of a separate existence for the phenomenon and so also, therefore, to talk of an independent measurement of that phenomenon. This means that within the supposedly objective, hard science of physics, it is accepted that reality and how it is measured form an inseparable whole.

28. 글의 흐름으로 보아, 주어진 문장이 들어가기에 가장 적절한 것은?[28]

Such a view is based on the ethnocentric attitude that the characteristics of one's own language are obviously superior.

Why are certain languages mistakenly thought to be primitive? ① There are several reasons. ② Some people consider other languages ugly or "primitive sounding" if those languages make use of sounds or sound combinations they find unclear because the sounds are greatly different from those of the languages they themselves speak. ③ But words that seem unpronounceable to speakers of one language — and are therefore considered obscure or even grotesque — are easily acquired by even the youngest native speakers of the language in which they occur. ④ To a native speaker of English, the Czech word scvrnkls "you flicked off (something) with your finger" looks quite strange, and its pronunciation may sound odd and even impossible because there is no vowel among the eight consonants; for native speakers of Czech, of course, scvrnkls is just another word. ⑤ Which speech sounds are used and how they are combined to form words and utterances vary from one language to the next, and speakers of no language can claim that their language has done the selecting and combining better than another.

⑤	separated	separated

🌼 다음 글을 읽고 물음에 답하시오.

Why are certain languages mistakenly **(A)think** to be **(B)[modern / primitive]**? There are several reasons. Some people consider other languages ugly or "primitive sounding" if those languages make use of sounds or sound combinations they find **(C)[clear / unclear]** because the sounds are greatly different from **(D)those** of the languages they **(E)themselves** speak. Such a view is based on the **(F)[concentric / ethnocentric]** attitude **(G)that** the characteristics of one's own language are obviously **(H)[superior / inferior]**. But words that seem **(I)[pronounceable / unpronounceable]** to speakers of one language — and are therefore considered **(J)[obvious / obscure]** or even **(K)[oblique / grotesque]** — **(L)easily acquire** by even the youngest **(M)[native / foreign]** speakers of the language in which **(N)they** occur. To a native speaker of English, the Czech word scvrnkls "you flicked off (something) with your finger" looks quite **(O)[normal / strange]**, and its pronunciation may sound **(P)[usual / odd]** and even **(Q)[possible / impossible]** because there is no vowel among the eight consonants; for native speakers of Czech, of course, scvrnkls is just another word. Which speech sounds **(R)use** and how they **(S)combine** to form words and utterances **(T)[equal / vary]** from one language to the next, and speakers of no language can **(U)[claim / disapprove]** that their language has done the selecting and combining better than **(V)other**.

On April 12, 1955, the day that the US government announced that the new polio vaccine was safe and effective, its inventor, Jonas Salk, was asked on television who owned the vaccine. He famously replied, "Well, the people, I would say. There is no patent. Could you patent the sun?" The vaccine was common property; it belonged to the people who had donated money for the public interest. Salk was later pitied for his decision. He could have earned $7 billion if his vaccine had been patented. His attitude to patenting, however, is not unique. Even in the era of excessive property protection, there is a new interest in open sources and access, global goods, and the notion of the commons. Elon Musk, CEO of Tesla Motors, decided in June 2014 to release all of his patents. Technological leadership is not defined by patents. The future of sustainable transport will be better served by openly sharing information and knowledge. "_____."

By the early 1990s, the decline of the southwestern willow flycatcher was clear. In 1993, the U.S. Fish and Wildlife Service (FWS) formally proposed listing the flycatcher as a federal endangered species and designating critical habitat, an important step under the Endangered Species Act that prevents damage to specific areas. The task of writing the rule that listed the bird as endangered under the act fell to Rob Marshall. Marshall, a Yale-trained biologist with FWS in Arizona, was becoming disillusioned by the overall implementation of the Endangered Species Act. The FWS was highly politicized by powerful, moneyed interests that saw species listings and particularly habitat designations as a threat to business: if a species is listed but no critical habitat is designated, a now-common pattern, then _____. This created an atmosphere in which it was extremely difficult for technical biological staff to maintain their integrity, says Marshall. For example, the process to list the flycatcher as endangered began in 1992, the proposed rule didn't come out until 1995, and it took until 1997 to produce the final ruling to list it. The FWS only completed the listing because the watchdog organization Center for Biological Diversity sued them.

Translating theory into something that can be assessed in the physical environment means that phenomena are made measurable. It is often assumed that the phenomenon being measured is the same no matter how it is measured. Translations of theory into practice may differ, but these do not alter the nature of the phenomenon being measured. Without this assumption, measurement between different individuals made in different places or at different times could not be compared. The assumption does not, however, mean that this viewpoint is correct. Within quantum physics there is a view that the observer and the phenomenon cannot be separated. The observer and phenomenon make up a single system, a measurement system. In this context it is not possible to separate the measurement made from the measurement system within which it was made. The measurement and the phenomenon become combined in an unbreakable link in the measurement system. It is impossible to talk of a separate existence for the phenomenon and so also, therefore, to talk of an independent measurement of that phenomenon. This means that within the supposedly objective, hard science of physics, it is accepted that _____.

85) the flycatcher
86) completed
87) FWS
88) integrity

89) the difficulty of listing the flycatcher as an endangered species
90) ①
91) measurable
92) 측정되고 있는 현상은 그것이 어떻게 측정이 되든지 간에 동일하다는 것
93) the phenomenon being measured is the same no matter how it is measured
94) nature
95) But for, If it were not for, Were it not for
96) 이론을 실제로 고쳐 말한 것들이 다를 수도 있지만, 이것들이 측정되고 있는 현상의 본질을 바꾸지는 않는다는 것
97) be compared
98) 이론을 실제로 고쳐 말한 것들이 다를 수도 있지만, 이것들이 측정되고 있는 현상의 본질을 바꾸지는 않는다는 것
99) correct
100) ②
101) be separated
102) 관찰자와 현상은 하나의 시스템, 즉 측정 시스템을 이루는 환경
103) 이루어진 측정과 그것이 이루어진 측정 시스템을 분리하는 것
104) separate
105) combined
106) 현상이 별개로 존재한다는 것과 그 현상의 독립된 측정에 대해 말하는 것
107) separate existence
108) independent
109) 현상이 별개로 존재한다는 것에 대해 말하는 것이 불가능하므로, 따라서 그 현상의 독립된 측정에 대해 말하는 것 역시 불가능하다는 것
110) 자연 과학에서 현실과 그것이 측정되는 방법이 불가분의 총체를 형성한다는 것
111) is accepted
112) inseparable whole
113) objective
114) conflicting views on the relationship between measurement and phenomenon
115) ⑤
116) thought
117) primitive
118) unclear
119) sounds
120) ④
121) ethnocentric
122) ②
123) superior
124) unpronounceable
125) obscure
126) grotesque
127) are easily acquired
128) native
129) 어느 한 언어의 사용자에게 발음하기 너무 힘들어 보이는 단어들, 그리고 그렇기 때문에 불분명하거나 심지어 괴상하다고 여겨지는 단어들
130) strange
131) odd
132) impossible
133) are used
134) are combined
135) vary
136) claim
137) another
138) grotesque
139) reasons certain languages are considered primitive
140) ④
141) All our patents belong to you
142) restrictions on business are far fewer
143) reality and how it is measured form an inseparable whole
144) their language has done the selecting and combining better than another
145) ⑥ excessive
146) ⑩ integrity
147) ⑫ inseparable
148) ④ superior
149) ②
150) ③
151) ④
