문법

1. 다음 글의 밑줄 친 부분 중, 어법상 틀린 것은?[1)]

What do we want to hear when ① **asking** the question why John slammed the door? Probably not that John put more than average energy into his act, ② **giving** the door more speed (which ③ **resulted from** a heavy collision of the door with the doorpost, a loud noise and the lamp ④ **rocking** back and forth). We normally are not interested in a report of the chain of causes and effects ⑤ **leading** up to the slamming. Neither ⑥ **do** we expect to hear a report about micro-processes in John's body ⑦ **causing** his movements. The why-question asks for reasons — 'He felt ⑧ **offended**', for instance. Even when we think in a materialistic frame of mind that the state of ⑨ **being offended** can be traced in John's brain, we usually will not be interested in an answer in neurological terms. So, normally, in our day-to-day why-questions about people's actions we expect to hear about their reasons.

2. 다음 글의 밑줄 친 부분 중, 어법상 틀린 것은?[2)]

We can presume that the components of love ① **proposed** by Sternberg can ② **be found** in all cultures. Intimacy, passion, and commitment are most likely cultural universals. Evidence of this comes from many sources, ③ **including** cultural anthropology, psychological research, and love poetry from across the world. What does appear ④ **to vary** across cultures, however, ⑤ **is** the emphasis ⑥ **placed** on the different components of love and on different types of relationships. In collectivist cultures like those ⑦ **found** in Asia and Africa, relationships with family may take priority over relationships with lovers and friends. In individualistic cultures, like ⑧ **those** of Northern Europe and North America, friendships and romantic relationships compete with family for priority (and often win). Likewise, the concept of duty (similar to Sternberg's concept of commitment) is absolutely central to Chinese Confucianism. In contrast, ⑨ **judging** by the mountains of romance novels, love songs, and beauty products ⑩ **found** in North America, ⑪ **which** is the passionate side of love that ⑫ **is prized** in this culture.

3. 다음 글의 밑줄 친 부분 중, 어법상 틀린 것은?[3)]

It could ① **be argued** that the 'processual' nature of personhood means that one becomes a person as one 'goes along' in society. Indeed, the African philosopher Ifeanyi Menkiti takes this position. He maintains ② **that** children are not fully human. ③ **Following** Kwame Gyekye, a Ghanaian philosopher, however, I would argue that the fact that personhood must ④ **be earned to be** not a denial of personhood to children. It is an affirmation of the view that personhood is an ongoing process ⑤ **attained** through interactions with others and one's community. It requires one ⑥ **to affirm** ideals and standards ⑦ **thought to be** constitutive of the life of a community. These are standards such as generosity, benevolence and respect. A number of sayings in some African societies ⑧ **refer** to people who have failed to meet standards ⑨ **expected** of a fully human person. These are sayings such as ga e se motho (Tswana) or a ku si muntu (Nguni), literally ⑩ **meaning** 'he or she is not a person'. Because one can fall short of these standards at any stage in the life cycle, personhood could ⑪ **be regarded** as a becoming. It is an unpredictable, open-ended process ⑫ **during which** personhood may be achieved, lost, and regained, ⑬ **depending** on a person's circumstances.

4. 다음 글의 밑줄 친 부분 중, 어법상 틀린 것은?[4)]

Some countries grow cash crops. These are crops that are in high demand and can ① **be grown** in large quantities in specific areas of the world. For example, sugar needs a hot, damp climate; coffee needs a hot climate, rainfall, and higher mountain elevations. Tea needs to grow on hillsides in rainy areas. Bananas grow well in tropical environments. Because there is a worldwide demand for specific items such as these, the farmers in tropical countries grow as ② **much** of these commodities as they can. These cash crops ③ **are sold** all around the world and ④ **bring** in a lot of money, but there are risks to ⑤ **specialize** in just one commodity for trade. If these farmers grow too much of a particular cash crop, ⑥ **that** creates more supply than demand, which ⑦ **drops** the price of the commodity. If the climate is bad, and the cash crop does not grow well one year, ⑧ **that** hurts the country ⑨ **selling** it because that crop may be the only one the country provides in ⑩ **large enough** quantities to make a living from.

5. 다음 글의 밑줄 친 부분 중, 어법상 틀린 것은?[5)]

Some might ① **have had** the impression ② **which** early scientists like Newton and Galileo belonged to a small sect that conjured science out of the blue as a result of mystical investigation. This wasn't so. Their work did not take place in a cultural vacuum: it was the product of many ancient traditions. One of these ③ **was** Greek philosophy, which encouraged the belief that the world could ④ **be explained** by logic, reasoning, and mathematics. Another was agriculture, ⑤ **from which** people learned about order and chaos by observing the cycles and rhythms of nature, ⑥ **interrupted** periodically by sudden and unpredictable disasters. And then there were religions which encouraged belief in a ⑦ **created** world order. The founding assumption of science is that the physical universe is ⑧ **neither** random nor absurd; it is not just a meaningless jumble of objects and phenomena randomly ⑨ **placed** side by side. Rather, there is a coherent scheme of things. This is often ⑩ **expressed** by the simple saying that there is order in nature. But scientists have gone beyond this vague notion to formulate a system of well-defined laws.

6. 다음 글의 밑줄 친 부분 중, 어법상 틀린 것은?[6)]

In English, many spelling errors could ① **be avoided** if we systematically transcribed each sound with a fixed letter. For instance, if we were to avoid ② **writing** the sound f with both the letter "f" and with "ph," life would ③ **be** much simpler. There is little doubt that we could easily get rid of this and many other useless redundancies ④ **whose** acquisition eats up many years of childhood. In fact, this is the timid direction that American spelling reform took when it simplified the irregular British spellings of "behaviour" or "analyse" into "behavior" and "analyze." Many more steps could ⑤ **have been taken** along the same lines. As expert readers, we cease ⑥ **to be** aware of the absurdity of our spelling. Even a letter as simple as "x" is unnecessary, as it stands for two phonemes ks ⑦ **that** already have their own spelling. In Türkiye, one takes a "taksi." That country, which in the space of one year ⑧ **adopted** the Roman alphabet, drastically ⑨ **simplifying** its spelling, and taught three million people how to read, ⑩ **sets** a beautiful example of the feasibility of spelling reform.

We can presume that the components of love proposed by Sternberg can be found in all cultures. Intimacy, passion, and commitment are most likely cultural universals. Evidence of this comes from many sources, including cultural anthropology, psychological research, and love poetry from across the world. What does appear to vary across cultures, however, _____. In collectivist cultures like those found in Asia and Africa, relationships with family may take priority over relationships with lovers and friends. In individualistic cultures, like those of Northern Europe and North America, friendships and romantic relationships compete with family for priority (and often win). Likewise, the concept of duty (similar to Sternberg's concept of commitment) is absolutely central to Chinese Confucianism. In contrast, judging by the mountains of romance novels, love songs, and beauty products found in North America, it is the passionate side of love that is prized in this culture.

① enforces religious doctrine and promotes hygiene
② forces their cultural values on other social groups
③ excludes outsiders and gives coherence to the group
④ erodes personal identity and limits cultural understanding
⑤ is the emphasis placed on the different components of love and on different types of relationships

Many more steps could have been taken along the same lines. As expert readers, we cease to be aware of the absurdity of our spelling. Even a letter as simple as "x" is unnecessary, as it stands for two phonemes ks that already have their own spelling. In Türkiye, one takes a "taksi." That country, which in the space of one year adopted the Roman alphabet, drastically simplified its spelling, and taught three million people how to read, sets a beautiful example of the _____ of spelling reform.

① stability
② diversity
③ nationality
④ identity
⑤ feasibility

29. 다음 글의 빈칸에 들어갈 말로 가장 적절한 것은?[29]

Some might have had the impression that early scientists like Newton and Galileo belonged to a small sect that conjured science out of the blue as a result of mystical investigation. This wasn't so. Their work _____: it was the product of many ancient traditions. One of these was Greek philosophy, which encouraged the belief that the world could be explained by logic, reasoning, and mathematics. Another was agriculture, from which people learned about order and chaos by observing the cycles and rhythms of nature, interrupted periodically by sudden and unpredictable disasters. And then there were religions which encouraged belief in a created world order. The founding assumption of science is that the physical universe is neither random nor absurd; it is not just a meaningless jumble of objects and phenomena randomly placed side by side. Rather, there is a coherent scheme of things. This is often expressed by the simple saying that there is order in nature. But scientists have gone beyond this vague notion to formulate a system of well-defined laws.

① depended on the consequences of experiments
② revealed the cause-and-effect relationship
③ did not take place in a cultural vacuum
④ did not explain the principles of the universe
⑤ did not maintain uncontrolled circumstances

30. 다음 글의 빈칸에 들어갈 말로 가장 적절한 것은?[30]

It could be argued that the 'processual' nature of personhood means that one becomes a person as one 'goes along' in society. Indeed, the African philosopher Ifeanyi Menkiti takes this position. He maintains that children are not fully human. Following Kwame Gyekye, a Ghanaian philosopher, however, I would argue that the fact that personhood must be earned is not a denial of personhood to children. It is an affirmation of the view that personhood is an ongoing process attained through interactions with others and one's community. It requires one to affirm ideals and standards thought to be constitutive of the life of a community. These are standards such as generosity, benevolence and respect. A number of sayings in some African societies refer to people who have failed to meet standards expected of a fully human person. These are sayings such as ga e se motho (Tswana) or a ku si muntu (Nguni), literally meaning 'he or she is not a person'. Because one can fall short of these standards at any stage in the life cycle, personhood could be regarded as a becoming. It is _____ during which personhood may be achieved, lost, and regained, depending on a person's circumstances.

① abundance of misleading data
② randomness of natural events
③ dilemmas raised by subjectivity
④ an unpredictable, open-ended process
⑤ a risk involved in its research methods

31. 다음 글의 빈칸에 들어갈 말로 가장 적절한 것은?[31]

What do we want to hear when asking the question why John slammed the door? Probably not that John put more than average energy into his act, giving the door more speed (which resulted in a heavy collision of the door with the doorpost, a loud noise and the lamp rocking back and forth). We normally are not interested in a report of the chain of causes and effects leading up to the slamming. Neither do we expect to hear a report about micro-processes in John's body causing his movements. The why-question asks for reasons — 'He felt offended', for instance. Even when we think in a materialistic frame of mind that the state of being offended can be traced in John's brain, we usually will not be interested in an answer in neurological terms. So, normally, in our day-to-day why-questions about people's actions we expect to hear about their _____.

① prejudice
② consensus
③ imagination
④ contradiction
⑤ reasons

32. 다음 글의 빈칸에 들어갈 말로 가장 적절한 것은?[32]

We can presume that the components of love proposed by Sternberg can be found in all cultures. Intimacy, passion, and commitment are most likely _____. Evidence of this comes from many sources, including cultural anthropology, psychological research, and love poetry from across the world. What does appear to vary across cultures, however, is the emphasis placed on the different components of love and on different types of relationships. In collectivist cultures like those found in Asia and Africa, relationships with family may take priority over relationships with lovers and friends. In individualistic cultures, like those of Northern Europe and North America, friendships and romantic relationships compete with family for priority (and often win). Likewise, the concept of duty (similar to Sternberg's concept of commitment) is absolutely central to Chinese Confucianism. In contrast, judging by the mountains of romance novels, love songs, and beauty products found in North America, it is the passionate side of love that is prized in this culture.

① building materials
② cultural universals
③ physical developments
④ financial hardships
⑤ public supports

It requires one **[to affirm / affirming]** ideals and standards **[thinking / thought]** **[to be / being]** constitutive of the life of a community. These are standards such as generosity, benevolence and respect. A number of sayings in some African societies **[refer / are referred]** to people who have failed **[to meet / meeting]** standards **[expecting / expected]** of a fully human person. These are sayings such as ga e se motho (Tswana) or a ku si muntu (Nguni), literally **[meaning / meant]** 'he or she is not a person'. Because one can fall short of these standards at any stage in the life cycle, personhood could **[regard / be regarded]** as a becoming. It is an unpredictable, open-ended process **[which / during which]** personhood may be achieved, lost, and regained, **[depending / depended]** on a person's circumstances.

58. 다음 글의 네모 안에서 문법상 맞는 말로 가장 적절한 것은?[서술형][58]

Some countries grow cash crops. These are crops **[that / what]** are in **[high / dependly]** demand and can **[grow / be grown]** in large quantities in specific areas of the world. For example, sugar needs a hot, damp climate; coffee needs a hot climate, rainfall, and higher mountain elevations. Tea needs to grow on hillsides in rainy areas. Bananas grow well in tropical environments. Because there is a worldwide demand for specific items such as these, the farmers in tropical countries grow as **[many / much]** of these commodities as they can. These cash crops **[sell / are sold]** all around the world and **[bring / brought]** in a lot of money, but there are risks to **[specialize / specializing]** in just one commodity for trade. If these farmers grow too much of a particular cash crop, **[that / what]** creates more supply than demand, which **[drop / drops]** the price of the commodity. If the climate is bad, and the cash crop does not grow well one year, **[that / what]** hurts the country **[selling / sold]** it because that crop may be the only one the country provides in **[large enough / enough large]** quantities to make a living from.

59. 다음 글의 네모 안에서 문법상 맞는 말로 가장 적절한 것은?[서술형][59]

Some might **[have / have had]** the impression **[that / what]** early scientists like Newton and Galileo belonged to a small sect **[that / what]** conjured science out of the blue as a result of mystical investigation. This wasn't so. Their work did not take place in a cultural vacuum: it was the product of many ancient traditions. One of these **[was / were]** Greek philosophy, which encouraged the belief **[that / what]** the world could **[explain / be explained]** by logic, reasoning, and mathematics. Another was agriculture, **[which / from which]** people learned about order and chaos by observing the cycles and rhythms of nature, **[interrupted / was which]** periodically by sudden and unpredictable disasters. And then there were religions which encouraged belief in a **[creating / created]** world order. The founding assumption of science is **[that / what]** the physical universe is **[either / neither]** random nor absurd; it is not just a meaningless jumble of objects and phenomena randomly **[placing / placed]** side by side. Rather, there is a coherent scheme of things. This is often **[expressing / expressed]** by the simple saying **[that / what]** there is order in nature. But scientists have gone beyond this vague notion to formulate a system of well-defined laws.

60. 다음 글의 네모 안에서 문법상 맞는 말로 가장 적절한 것은?[서술형][60]

In English, many spelling errors could **[avoid / be avoided]** if we systematically transcribed each sound with a fixed letter. For instance, if we were to avoid **[to write / writing]** the sound f with both the letter "f" and with "ph," life would **[be / have been]** much simpler. There is little doubt **[that / what]** we could easily get rid of this and many other useless redundancies **[whose / which]** acquisition eats up many years of childhood. In fact, this is the timid direction **[that / what]** American spelling reform took when it simplified the irregular British spellings of "behaviour" or "analyse" into "behavior" and "analyze." Many more steps could **[have taken / have been taken]** along the same lines. As expert readers, we cease **[to be / being]** aware of the absurdity of our spelling. Even a letter as **[simple / simply]** as "x" is unnecessary, as it stands for two phonemes ks **[that / what]** already have their own spelling. In Türkiye, one takes a "taksi." That country, **[which / it]** in the space of one year **[adopting / adopted]** the Roman alphabet, drastically **[simplifying / simplified]** its spelling, and taught three million people how to read, **[setting / sets]** a beautiful example of the feasibility of spelling reform.

다음 글을 읽고 물음에 답하시오.

We can presume that the components of love **(A)propose** by Sternberg can **(B)find** in all cultures. Intimacy, passion, and commitment are most likely **(C)**_____. Evidence of **(D)this** comes from many sources, **(E)include** cultural anthropology, psychological research, and love poetry from across the world. What does appear **(F)vary** across cultures, however, is the **(G)**_____ **(H)place** on the different components of love and on different types of relationships. In **(I)**_____ cultures like **(J)those** **(K)find** in Asia and Africa, relationships with family may take **(L)**_____ over relationships with lovers and friends. In **(M)**_____ cultures, like **(N)those** of Northern Europe and North America, friendships and romantic relationships **(O)**_____ with family for priority (and often win). Likewise, the concept of **(P)**_____ (similar to Sternberg's concept of commitment) is absolutely **(Q)**_____ to Chinese Confucianism. In contrast, **(R)judge** by the mountains of romance novels, love songs, and beauty products **(S)find** in North America, **(T)**이 문화에서 소중히 여겨지는 것은 바로 사랑의 열정적인 면이다.

to make (something) appear or seem to appear by using magic

174. 위 글을 요약하고자 한다. 다음 빈칸(A), (B)에 들어갈 말로 가장 적절한 것은?[174]

Scientists establish a **(A)**_____ system of laws based on the **(B)**_____ of nature.

	(A)	(B)
①	well-confined	order
②	well-confined	confusion
③	well-refined	order
④	well-defined	confusion
⑤	well-defined	order

다음 글을 읽고 물음에 답하시오.

In English, many **(A)**_____ could **(B)avoid** if we systematically **(C)**_____ each sound with a fixed letter. For instance, if we were to avoid **(D)write** the sound f with both the letter "f" and with "ph," life would be much simpler. There is little doubt **(E)that** we could easily **(F)**_____ **(G)this** and many other **(H)**_____ **(I)습득하는데 수년의 유년 시절을 잡아먹는**. In fact, **(J)this** is the **(K)**_____ that American spelling reform took when it simplified the **(L)**_____ British spellings of "behaviour" or "analyse" into "behavior" and "analyze." Many more steps could **(M)take[완료시제]** along **(N)the same lines**. As expert readers, we cease to be aware of the **(O)**_____ of our spelling. Even a letter as **(P)simple** as "x" is **(Q)**_____, as **(R)it** stands for two phonemes ks that already have their own spelling. In Türkiye, one takes a "taksi." That country, which in the space of one year **(S)**_____ the Roman alphabet, drastically **(T)**_____ its spelling, and taught three million people how to read, **(U)set** a beautiful example of the **(V)**_____ of **(W)**_____.

199. 다음 빈칸에 들어갈 말을 주어진 〈조건〉에 맞게 영어로 쓰시오.[199]

What do we want to hear when asking the question why John slammed the door? Probably not that John put more than average energy into his act, giving the door more speed (which resulted in a heavy collision of the door with the doorpost, a loud noise and the lamp rocking back and forth). We normally are not interested in a report of the chain of causes and effects leading up to the slamming. Neither do we expect to hear a report about micro-processes in John's body causing his movements. The why-question asks for reasons — 'He felt offended', for instance. Even when we think in a materialistic frame of mind that the state of being offended can be traced in John's brain, we usually will not be interested in an answer in neurological terms. So, normally, in our day-to-day why-questions about people's actions _____.

200. 다음 빈칸에 들어갈 말을 주어진 〈조건〉에 맞게 영어로 쓰시오.[200]

We can presume that the components of love proposed by Sternberg can be found in all cultures. Intimacy, passion, and commitment are most likely cultural universals. Evidence of this comes from many sources, including cultural anthropology, psychological research, and love poetry from across the world. What does appear to vary across cultures, however, is _____. In collectivist cultures like those found in Asia and Africa, relationships with family may take priority over relationships with lovers and friends. In individualistic cultures, like those of Northern Europe and North America, friendships and romantic relationships compete with family for priority (and often win). Likewise, the concept of duty (similar to Sternberg's concept of commitment) is absolutely central to Chinese Confucianism. In contrast, judging by the mountains of romance novels, love songs, and beauty products found in North America, it is the passionate side of love that is prized in this culture.

201. 다음 빈칸에 들어갈 말을 주어진 〈조건〉에 맞게 영어로 쓰시오.[201]

It could be argued that the 'processual' nature of personhood means that one becomes a person as one 'goes along' in society. Indeed, the African philosopher Ifeanyi Menkiti takes this position. He maintains that children are not fully human. Following Kwame Gyekye, a Ghanaian philosopher, however, I would argue that the fact that personhood must be earned is not a denial of personhood to children. It is an affirmation of the view that personhood is an ongoing process attained through interactions with others and one's community. It requires one to affirm ideals and standards thought to be constitutive of the life of a community. These are standards such as generosity, benevolence and respect. A number of sayings in some African societies refer to people who have failed to meet standards expected of a fully human person. These are sayings such as ga e se motho (Tswana) or a ku si muntu (Nguni), literally meaning 'he or she is not a person'. Because one can fall short of these standards at any stage in the life cycle, _____. It is an unpredictable, open-ended process during which personhood may be achieved, lost, and regained, depending on a person's circumstances.

202. 다음 빈칸에 들어갈 말을 주어진 〈조건〉에 맞게 영어로 쓰시오.202)

Some countries grow cash crops. These are crops that are in high demand and can be grown in large quantities in specific areas of the world. For example, sugar needs a hot, damp climate; coffee needs a hot climate, rainfall, and higher mountain elevations. Tea needs to grow on hillsides in rainy areas. Bananas grow well in tropical environments. Because there is a worldwide demand for specific items such as these, the farmers in tropical countries grow as much of these commodities as they can. These cash crops are sold all around the world and bring in a lot of money, but _____. If these farmers grow too much of a particular cash crop, that creates more supply than demand, which drops the price of the commodity. If the climate is bad, and the cash crop does not grow well one year, that hurts the country selling it because that crop may be the only one the country provides in large enough quantities to make a living from.

203. 다음 빈칸에 들어갈 말을 주어진 〈조건〉에 맞게 영어로 쓰시오.203)

Some might have had the impression that early scientists like Newton and Galileo belonged to a small sect that conjured science out of the blue as a result of mystical investigation. This wasn't so. Their work did not take place in a cultural vacuum: _____. One of these was Greek philosophy, which encouraged the belief that the world could be explained by logic, reasoning, and mathematics. Another was agriculture, from which people learned about order and chaos by observing the cycles and rhythms of nature, interrupted periodically by sudden and unpredictable disasters. And then there were religions which encouraged belief in a created world order. The founding assumption of science is that the physical universe is neither random nor absurd; it is not just a meaningless jumble of objects and phenomena randomly placed side by side. Rather, there is a coherent scheme of things. This is often expressed by the simple saying that there is order in nature. But scientists have gone beyond this vague notion to formulate a system of well-defined laws.
