My name is Olivia Spikes, the mayor of Millstown. Before you ① **attend** the world championships next month, on behalf of everyone in Millstown, I wish to let you ② **know** that we are supporting you all the way. As you are the first famous figure skater from Millstown, we are all big fans of ③ **you**. Our community ④ **was** so proud of you for winning the national championships last year. Your ⑤ **amazing** performance really moved us all. We all believe ⑥ **that** you are going to impress the entire nation again. Your hometown supporters will cheer for you whenever you perform on the ice. Good luck!

2. 다음 글의 밑줄 친 부분 중, 어법상 틀린 것은?[2][19번 지문]

"Daddy!" Jenny called, ① **waving** a yellow crayon in her little hand. Nathan ② **approached** her, ③ **wondering** why she was calling him. Jenny, his three-year-old toddler, ④ **was drawing** a big circle on a piece of paper. "What are you doing, Sweetie?" Nathan asked with interest. She just kept ⑤ **drawing** without reply. He continued watching her, wondering ⑥ **what** she was working on. She was drawing something that looked like a face. When she finished it, Jenny shouted, "Look, Daddy!" She held her artworkup proudly. ⑦ **Taking** a closer look, Nathan recognized that it was his face. The face had two big eyes and a beard just like ⑧ **him**. He loved Jenny's work. ⑨ **Filled** with joy and happiness, Nathan gave her a big hug.

3. 다음 글의 밑줄 친 부분 중, 어법상 틀린 것은?[3][20번 지문]

Becoming competent in another culture means looking beyond behavior to see ① **if** we can understand the attitudes, beliefs, and values that motivate ② **what** we observe. By looking only at the visible aspects of culture — customs, clothing, food, and language — we develop a short-sighted view of intercultural understanding — just the tip of the iceberg, really. If we are to be successful in our business interactions with people who have different values and beliefs about how the world ③ **is ordered**, then we must go below the surface of ④ **what** it means to understand culture and attempt to see ⑤ **what** Edward Hall calls the "hidden dimensions." Those ⑥ **hidden** aspects are the very foundation of culture and are the reason why culture is actually more than ⑦ **meeting** the eye. We tend not to notice those cultural norms until they violate ⑧ **what** we consider to be common sense, good judgment, or the nature of things.

4. 다음 글의 밑줄 친 부분 중, 어법상 틀린 것은?[4][21번 지문]

You may feel there is something scary about an algorithm ① **deciding** what you might like. Could it mean that, if computers conclude you won't like something, you will never get the chance ② **to see** it? Personally, I really enjoy ③ **being directed** toward new music that I might not ④ **have found** by myself. I can quickly get ⑤ **stuck** in a rut where I put on the same songs over and over. That's ⑥ **why** I've always enjoyed the radio. But the algorithms that are now pushing and pulling me through the music library are perfectly suited to ⑦ **find** gems that I'll like. My worry originally about such algorithms was that they might drive everyone into certain parts of the library, ⑧ **leaving** others lacking listeners. Would they cause a convergence of tastes? But thanks to the nonlinear and chaotic mathematics usually behind them, this doesn't happen. A small divergence in my likes ⑨ **compared** to yours can send us off into different far corners of the library.

5. 다음 글의 밑줄 친 부분 중, 어법상 틀린 것은?[5][22번 지문]

Historically, drafters of tax legislation ① **are** attentive to questions of economics and history, and less attentive to moral questions. Questions of morality ② **are often pushed** to the side in legislative debate, ③ **labeled** too controversial, too difficult to answer, or, worst of all, ④ **irrelevant** to the project. But, in fact, the moral questions of taxation ⑤ **are** at the very heart of the creation of tax laws. Rather than ⑥ **irrelevant**, moral questions are fundamental to the imposition of tax. Tax is the application of a society's theories of distributive justice. Economics can go a long way towards helping a legislature ⑦ **determine** whether or not a particular tax law will help achieve a particular goal, but economics cannot, in a vacuum, ⑧ **identify** the goal. Creating tax policy requires ⑨ **to identify** a moral goal, which is a task that must involve ethics and moral analysis.

6. 다음 글의 밑줄 친 부분 중, 어법상 틀린 것은?[6][23번 지문]

Environmental learning ① **occurs** when farmers base decisions on observations of "payoff" information. They may observe their own or neighbors' farms, but it is the empirical results they are ② **used** as a guide, not the neighbors themselves. They are looking at farming activities as experiments and ③ **assessing** such factors as relative advantage, compatibility with ④ **existing** resources, difficulty of use, and "trialability" — how ⑤ **well** can it ⑥ **be experimented** with. But that criterion of "trialability" turns out ⑦ **to be** a real problem; it's true that farmers are always experimenting, but working farms ⑧ **are** very flawed laboratories. Farmers cannot set up the controlled conditions of professional test plots in research facilities. Farmers also often confront complex and difficult-to-observe phenomena ⑨ **that** would be hard to manage even if they could run controlled experiments. Moreover farmers can rarely acquire payoff information on more than ⑩ **a few** of the production methods they might use, which ⑪ **makes** the criterion of "relative advantage" hard to measure.

7. 다음 글의 밑줄 친 부분 중, 어법상 틀린 것은?[7][24번 지문]

Not only musicians and psychologists, but also ① **committed** music enthusiasts and experts often voice the opinion that the beauty of music lies in an expressive deviation from the exactly ② **defined** score. Concert performances become ③ **interesting** and gain in attraction from the fact that they go far beyond the information ④ **printed** in the score. In his early studies on musical performance, Carl Seashore discovered that musicians only rarely play two equal notes in exactly the same way. Within the same metric structure, there is a wide potential of variations in tempo, volume, tonal quality and intonation. Such variation ⑤ **is based** on the composition but ⑥ **diverged** from it individually. We generally call this 'expressivity'. This explains why we do not lose interest when we hear different artists ⑦ **perform** the same piece of music. It also explains why it is worthwhile for following generations to repeat the same repertoire. New, inspiring interpretations ⑧ **help** us to expand our understanding, which serves to enrich and animate the music scene.

8. 다음 글의 밑줄 친 부분 중, 어법상 틀린 것은?[8][26번 지문]

Leon Festinger was an American social psychologist. He ① **was born** in New York City in 1919 to a Russian immigrant family. As a graduate student at the University of Iowa, Festinger ② **was influenced** by Kurt Lewin, a leading social psychologist. After graduating from there, he became a professor at the Massachusetts Institute of Technology in 1945. He later moved to Stanford University, ③ **where** he continued his work in social psychology. His theory of social comparison earned him a good reputation. Festinger actively participated in international ④ **scholar** cooperation. In the late 1970s, he turned his interest to the field of history. He was one of the most ⑤ **cited** psychologists of the twentieth century. Festinger's theories still play an important role in psychology today.

9. 다음 글의 밑줄 친 부분 중, 어법상 틀린 것은?[9][30번 지문]

Although the wonders of modern technology ① **have provided** people with opportunities beyond the wildest dreams of our ancestors, the good, as usual, ② **is weakened** by a downside. One of those downsides **is** that anyone who so chooses can pick up the virtual megaphone that is the Internet and ③ **put** in their two cents on any of an infinite number of topics, regardless of their qualifications. After all, on the Internet, there are no regulations ④ **preventing** a kindergarten teacher from offering medical advice or a physician from suggesting ways to safely ⑤ **make** structural changes to your home. As a result, misinformation gets ⑥ **disseminated** as information, and it is not always easy to differentiate the two. This can be particularly ⑦ **frustrating** for scientists, who spend their lives ⑧ **learning** how to understand the intricacies of the world around them, only to have their work summarily ⑨ **challenged** by people ⑩ **whom** experience with the topic can be measured in minutes. This frustration is then ⑪ **amplified** by the fact that, to the general public, both the scientist and the challenger ⑫ **are awarded** equal credibility.

10. 다음 글의 밑줄 친 부분 중, 어법상 틀린 것은?[10][31번 지문]

More than just having territories, animals also partition them. And this insight turned out ① **to be** particularly useful for zoo husbandry. An animal's territory has an internal arrangement that Heini Hediger ② **compared** to the inside of a person's house. Most of us ③ **assign** separate functions to separate rooms, but even if you look at a one-room house you will find the same internal specialization. In a cabin or a mud hut, or even a Mesolithic cave from 30,000 years ago, this part is for cooking, that part is for sleeping; this part is for making tools and weaving, that part is for waste. We keep a ④ **neatly** functional organization. To a varying extent, ⑤ **other** animals do the same. A part of an animal's territory is for eating, a part for sleeping, a part for swimming or wallowing, a part may ⑥ **be set** aside for waste, ⑦ **depending** on the species of animal.

11. 다음 글의 밑줄 친 부분 중, 어법상 틀린 것은?[11][32번 지문]

Fans feel for feeling's own sake. They make meanings beyond ① **what** seems to be on offer. They build identities and experiences, and make artistic creations of their own to share with others. A person can be an individual fan, feeling an "idealized connection with a star, strong feelings of memory and nostalgia," and ② **engaging** in activities like "collecting to develop a sense of self." But, more often, individual experiences ③ **are embedded** in social contexts ④ **where** other people with shared attachments socialize around the object of their affections. Much of the pleasure of fandom comes from ⑤ **being connected** to other fans. In their diaries, Bostonians of the 1800s described ⑥ **being** part of the crowds at concerts as part of the pleasure of attendance. A compelling argument can ⑦ **be made** that what fans love ⑧ **to be** less the object of their fandom than the attachments to (and differentiations from) one another that those affections afford.

12. 다음 글의 밑줄 친 부분 중, 어법상 틀린 것은?[12][33번 지문]

There was nothing modern about the idea of men ① **making** women's clothes — we saw them ② **doing** it for centuries in the past. In the old days, however, the client was always primary and her tailor was an obscure craftsman, perhaps ③ **talented** but perhaps not. She had her own ideas like any patron, there were no fashion plates, and the tailor was simply at her service, perhaps with helpful suggestions about ④ **what** others were wearing. ⑤ **Beginning** in the late nineteenth century, with the hugely successful rise of the artistic male couturier, ⑥ **which** was the designer who became celebrated, and the client ⑦ **elevated** by his inspired attention. In a climate of admiration for male artists and their female creations, the dress-designer first flourished as the same sort of creator. Instead of the old rule that dressmaking is a craft, a modern connection between dress-design and art ⑧ **was invented** that had not been there before.

13. 다음 글의 밑줄 친 부분 중, 어법상 틀린 것은?[13][34번 지문]

In trying to explain how different disciplines attempt ① **to understand** autobiographical memory the literary critic Daniel Albright said, "Psychology is a garden, literature is a wilderness." He meant, I believe, that psychology seeks ② **to make** patterns, find regularity, and ultimately impose order on human experience and behavior. Writers, by contrast, dive into the unruly, ③ **untamed** depths of human experiences. ④ **What** he said about understanding memory can ⑤ **be extended** to our questions about young children's minds. If we psychologists are too ⑥ **bent** on identifying the orderly pattern, the regularities of children's minds, we may miss an essential and pervasive characteristic of our topic: the child's more unruly and imaginative ways of talking and thinking. It is not only the developed writer or literary scholar who seems ⑦ **drawn** toward a somewhat wild and idiosyncratic way of thinking; young children are as well. The psychologist ⑧ **is interested** in young children may have to venture a little more often into the wilderness in order to get a good picture of how children think.

14. 다음 글의 밑줄 친 부분 중, 어법상 틀린 것은?[14][35번 지문]

Because plants tend ① **to recover** from disasters more quickly than animals, they are essential to the revitalization of ② **damaged** environments. Why do plants have this preferential ability to recover from disaster? It is largely ③ **because**, unlike animals, they can generate new organs and tissues throughout their life cycle. This ability is due to the activity of plant meristems — regions of ④ **undifferentiated** tissue in roots and shoots that can, in response to specific cues, ⑤ **differentiate** into new tissues and organs. If meristems are not ⑥ **damaged** during disasters, plants can recover and ultimately transform the destroyed or barren environment. You can see this phenomenon on a smaller scale when a tree ⑦ **struck** by lightning forms new branches that grow from the old scar. In addition to regeneration or resprouting of plants, ⑧ **disturbing** areas can also recover through reseeding.

15. 다음 글의 밑줄 친 부분 중, 어법상 틀린 것은?[15][36번 지문]

When two natural bodies of water ① **stand** at different levels, building a canal between them ② **presents** a complicated engineering problem. To make up for the difference in level, engineers build one or more water "steps," ③ **called** locks, ④ **that** carry ships or boats up or down between the two levels. A lock is an artificial water basin. It has a long rectangular shape with concrete walls and a pair of gates at each end. When a vessel is going upstream, the upper gates stay ⑤ **to close** as the ship enters the lock at the lower water level. The downstream gates are then closed and more water ⑥ **is pumped** into the basin. The rising water lifts the vessel to the level of the upper body of water. Then the upper gates open and the ship passes through. For downstream passage, the process works the opposite way. The ship enters the lock from the upper level, and water ⑦ **is pumped** from the lock until the ship is in line with the lower level.

16. 다음 글의 밑줄 친 부분 중, 어법상 틀린 것은?[16][37번 지문]

Culture operates in ways we can consciously consider and discuss but also in ways ① **of which** we are far less cognizant. When we have to offer an account of our actions, we consciously understand which excuses might prove ② **acceptable**, ③ **given** the particular circumstances we find ourselves in. In such situations, we use cultural ideas as we would use a particular tool. We select the cultural notion as we would select a screwdriver: certain jobs call for a Phillips head while others require an Allen wrench. Whichever idea we insert into the conversation to justify our actions, the point is ④ **that** our motives are discursively available to us. They are not ⑤ **hidden**. In some cases, however, we are ⑥ **far** less aware of why we believe a certain claim to be true, or how we are to explain why certain social realities ⑦ **exist**. Ideas about the social world ⑧ **become** part of our worldview without our necessarily ⑨ **to be** aware of the source of the particular idea or ⑩ **that** we even hold the idea at all.

17. 다음 글의 밑줄 친 부분 중, 어법상 틀린 것은?[17][38번 지문]

In everyday life, we tend ① **to see** any collection of people as a group. However, social psychologists use this term more precisely. In particular, they define a group as two or more people who interact with, and exert mutual influences on, each other. It is this sense of mutual interaction or inter-dependence for a common purpose which distinguishes the members of a group from a mere aggregation of individuals. For example, as Kenneth Hodge observed, a collection of people who happen ② **to go** for a swim after work on the same day each week ③ **does** not, strictly speaking, ④ **constituting** a group because these swimmers do not interact with each other in a structured manner. By contrast, a squad of young competitive swimmers who train every morning before going to school ⑤ **is** a group because they not only share a common objective (training for competition) but also interact with each other in formal ways (e.g., by warming up together beforehand). It is this sense of people ⑥ **coming** together to achieve a common objective that defines a "team".

18. 다음 글의 밑줄 친 부분 중, 어법상 틀린 것은?[18][39번 지문]

Each new wave of technology ① **is intended** to enhance user convenience, as well as improve security, but sometimes these do not necessarily go hand-in-hand. For example, the transition from magnetic stripe to ② **embedded** chip slightly slowed down transactions, sometimes ③ **frustrating** customers in a hurry. ④ **Make** a service too burdensome, and the potential customer will go elsewhere. This obstacle applies at several levels. Passwords, double-key identification, and biometrics such as fingerprint-, iris-, and voice recognition are all ways of keeping the account details ⑤ **hidden** from potential fraudsters, of keeping your data dark. But they all inevitably add a burden to the use of the account. On top of the hurdles ⑥ **is introduced** in accessing his or her money, if a suspected fraud ⑦ **is detected**, the account holder has to deal with the phone call ⑧ **asking** if he or she made the suspicious transactions. This is all useful at some level — indeed, it can be reassuring ⑨ **knowing** that your bank is keeping alert to protect you — but it becomes tiresome if too many such calls ⑩ **are received**.

19. 다음 글의 밑줄 친 부분 중, 어법상 틀린 것은?[19][40번 지문]

A striving ① **to demonstrate** individual personality through designs should not be surprising. Most designers ② **are educated** to work as individuals, and design literature contains countless references to 'the designer'. Personal flair is without doubt an absolute necessity in some product categories, particularly relatively small objects, with a low degree of technological complexity, such as furniture, lighting, small appliances, and housewares. In larger-scale projects, however, even ③ **where** a strong personality exercises powerful influence, the fact ④ **that** substantial numbers of designers ⑤ **are employed** in implementing a concept can easily ⑥ **be overlooked**. The emphasis on individuality is therefore problematic — rather than actually designing, many successful designer 'personalities' ⑦ **functioning** more as creative managers. A distinction needs ⑧ **to be made** between designers working truly alone and ⑨ **those** working in a group. In the latter case, management organization and processes can be equally as ⑩ **relevant** as designers' creativity.

20. 다음 글의 밑줄 친 부분 중, 어법상 틀린 것을 모두 고르시오.[20] [41-42번 지문]

Climate change experts and environmental humanists ① **alike** agree that the climate crisis is, at its core, a crisis of the imagination and much of the popular imagination ② **shaped** by fiction. In his 2016 book The Great Derangement, anthropologist and novelist Amitav Ghosh takes on this relationship between imagination and environmental management, ③ **arguing** that humans have failed to respond to climate change at least in part because fiction fails to believably represent it. Ghosh explains that climate change is largely absent from contemporary fiction because the cyclones, floods, and other catastrophes it ④ **is brought** to mind simply ⑤ **seeming** too "improbable" to belong in stories about everyday life. But climate change does not only reveal itself as a series of extraordinary events. In fact, as environmentalists and ecocritics from Rachel Carson to Rob Nixon ⑥ **have** pointed out, environmental change can be "imperceptible"; it proceeds gradually, only occasionally ⑦ **producing** "explosive and spectacular" events. Most climate change impacts cannot ⑧ **be observed** day-to-day, but they become visible when we ⑨ **are confronted** with their accumulated impacts.

Climate change evades our imagination because it poses significant representational challenges. It cannot ⑩ **be observed** in "human time," which is ⑪ **because** documentary filmmaker Jeff Orlowski, who tracks climate change effects on glaciers and coral reefs, ⑫ **using** "before and after" photographs ⑬ **to take** several months apart in the same place to highlight changes that occurred gradually.

21. 다음 글의 밑줄 친 부분 중, 어법상 틀린 것을 모두 고르시오.[21] [43-45번 지문]

① **Walking** out of Charing Cross Station in London, Emilia and her traveling companion, Layla, already felt their hearts ② **pounding**. It was the second day of their European summer trip. They were about ③ **visiting** one of the world's most famous art galleries. The two of them started hurrying with excitement. Suddenly, Emilia shouted, "Look! There it is! We're finally at the National Gallery!" Layla laughed and responded, "Your dream's finally come true!" Upon ④ **entering into** the National Gallery, Emilia knew exactly where to go first. She grabbed Layla's hand and dragged her hurriedly to find van Gogh's Sunflowers. It was Emilia's favorite painting and had inspired her ⑤ **becoming** a painter. Emilia loved his use of bright colors and light. She couldn't wait to finally see his masterpiece in person. "It'll be ⑥ **amazing** to see how he communicated the feelings of isolation and loneliness in his work," she said eagerly.

However, after searching all the exhibition rooms, Emilia and Layla couldn't find van Gogh's masterpiece anywhere. "That's weird. Van Gogh's Sunflowers should be here. Where is it?" Emilia looked upset, but Layla kept ⑦ **calmly** and said, "Maybe you've missed a notice about it. Check the National Gallery app." Emilia checked it quickly. Then, she sighed, "Sunflowers isn't here! It's ⑧ **been lent** to a different gallery for a special exhibition. I can't believe I didn't check!" "Don't lose hope yet! Which gallery is the special exhibition at?" Layla asked. Emilia responded, "Well, his Sunflowers is still in England, but it's at a gallery in Liverpool. That's a long way, isn't it?" After a quick search on her phone, Layla stated, "No! It's only two hours to Liverpool by train. The next train leaves in an hour. Why don't we take it?" After considering the idea, Emilia, now ⑨ **relieving**, ⑩ **responding**, "Yeah, but you always wanted to see Rembrandt's paintings. Let's do that first, Layla! Then, after lunch, we can catch the next train." Layla smiled brightly.

어휘 추론

When two natural bodies of water stand at different levels, building a canal between them presents a ① **complicated** engineering problem. To ② **make up for** the difference in level, engineers build one or more water "steps," called locks, that carry ships or boats up or down between the two levels. A lock is an ③ **artificial** water basin. It has a long ④ **rectangular** shape with concrete walls and a pair of gates at each end. When a vessel is going upstream, the upper gates stay ⑤ **closed** as the ship enters the lock at the lower water level. The downstream gates are then closed and more water is pumped into the basin. The rising water ⑥ **lifts** the vessel to the level of the upper body of water. Then the upper gates open and the ship passes through. For downstream passage, the process works the ⑦ **opposite** way. The ship enters the ⑧ **lock** from the upper level, and water is pumped from the lock until the ship is in line with the ⑨ **higher** level.

Culture operates in ways we can ① **consciously** consider and discuss but also in ways of which we are far less cognizant. When we have to offer an account of our actions, we consciously understand which excuses might prove ② **acceptable**, given the particular circumstances we find ourselves in. In such situations, we use ③ **cultural** ideas as we would use a particular tool. We select the ④ **cultural** notion as we would select a screwdriver: certain jobs call for a Phillips head while others require an Allen wrench. Whichever idea we insert into the conversation to ⑤ **justify** our actions, the point is that our motives are discursively ⑥ **available** to us. They are not hidden. In some cases, however, we are far ⑦ **more aware** of why we believe a certain claim to be true, or how we are to explain why certain ⑧ **social** realities exist. Ideas about the social world become part of our worldview without our necessarily being aware of the source of the particular idea or that we even ⑨ **hold** the idea at all.

35. 다음 글의 밑줄 친 부분 중 문맥상 낱말의 쓰임이 적절하지 않은 것은?[35][38번 지문]

In everyday life, we tend to see any collection of people as a group. However, social psychologists use this term more ① **precisely**. In particular, they ② **define** a group as two or more people who interact with, and exert ③ **mutual** influences on, each other. It is this sense of mutual interaction or ④ **inter-dependence** for a common purpose which distinguishes the members of a group from a ⑤ **mere aggregation** of individuals. For example, as Kenneth Hodge observed, a collection of people who happen to go for a swim after work on the same day each week does not, strictly speaking, ⑥ **constitute** a group because these swimmers do not interact with each other in a ⑦ **structured** manner. By contrast, a squad of young ⑧ **competitive** swimmers who train every morning before going to school is a group because they not only ⑨ **share** a common objective (training for competition) but also interact with each other in ⑩ **informal** ways (e.g., by warming up together beforehand). It is this sense of people coming together to ⑪ **achieve** a common objective that defines a "team".

36. 다음 글의 밑줄 친 부분 중 문맥상 낱말의 쓰임이 적절하지 않은 것은?[36][39번 지문]

Each new wave of technology is intended to ① **enhance** user convenience, as well as improve security, but sometimes these do not necessarily go ② **hand-in-hand**. For example, the transition from magnetic stripe to embedded chip slightly ③ **slowed down** transactions, sometimes ④ **frustrating** customers in a hurry. Make a service too ⑤ **burdensome**, and the potential customer will go elsewhere. This ⑥ **obstacle** applies at several levels. Passwords, double-key identification, and biometrics such as fingerprint-, iris-, and voice recognition are all ways of keeping the account details ⑦ **hidden** from potential fraudsters, of keeping your data ⑧ **dark**. But they all inevitably ⑨ **add** a burden to the use of the account. On top of the ⑩ **hurdles** introduced in accessing his or her money, if a suspected fraud is detected, the account holder has to deal with the phone call asking if he or she made the ⑪ **unsuspicious** transactions. This is all useful at some level — indeed, it can be reassuring knowing that your bank is keeping alert to protect you — but it becomes ⑫ **tiresome** if too many such calls are received.

37. 다음 글의 밑줄 친 부분 중 문맥상 낱말의 쓰임이 적절하지 않은 것은?[37][40번 지문]

A striving to demonstrate individual ① **personality** through designs should not be surprising. Most designers are educated to work as individuals, and design literature contains countless ② **references** to 'the designer'. Personal flair is without doubt an ③ **absolute** necessity in some product categories, particularly relatively small objects, with a ④ **low** degree of technological complexity, such as furniture, lighting, small appliances, and housewares. In larger-scale projects, however, even where a ⑤ **strong** personality exercises powerful influence, the fact that ⑥ **substantial** numbers of designers are employed in ⑦ **implementing** a concept can easily be ⑧ **overlooked**. The emphasis on ⑨ **individuality** is therefore ⑩ **problematic** — rather than actually designing, many successful designer 'personalities' function ⑪ **more** as creative managers. A ⑫ **distinction** needs to be made between designers working truly alone and those working in a group. In the latter case, management organization and processes can be equally as ⑬ **irrelevant** as designers' creativity.

빈칸 추론

38. 다음 글의 빈칸에 들어갈 말로 가장 적절한 것은?[38][20번 지문]

Becoming competent in another culture _____ to see if we can understand the attitudes, beliefs, and values that motivate what we observe. By looking only at the visible aspects of culture — customs, clothing, food, and language — we develop a short-sighted view of intercultural understanding — just the tip of the iceberg, really. If we are to be successful in our business interactions with people who have different values and beliefs about how the world is ordered, then we must go below the surface of what it means to understand culture and attempt to see what Edward Hall calls the "hidden dimensions." Those hidden aspects are the very foundation of culture and are the reason why culture is actually more than meets the eye. We tend not to notice those cultural norms until they violate what we consider to be common sense, good judgment, or the nature of things.

① places great value on fairness
② means looking beyond behavior
③ grows out of their initial evaluation
④ expresses a strong dislike for novel objects
⑤ puts excessive thought into their decisions

39. 다음 글의 빈칸에 들어갈 말로 가장 적절한 것은?[39][22번 지문]

Historically, drafters of tax legislation are attentive to questions of economics and history, and less attentive to moral questions. Questions of morality are often pushed to the side in legislative debate, labeled too controversial, too difficult to answer, or, worst of all, irrelevant to the project. But, in fact, the moral questions of taxation are at the very heart of the creation of tax laws. Rather than irrelevant, moral questions are fundamental to the imposition of tax. Tax is the application of a society's theories of distributive justice. Economics can go a long way towards helping a legislature determine whether or not a particular tax law will help achieve a particular goal, but economics cannot, in a vacuum, identify the goal. Creating tax policy requires _____, which is a task that must involve ethics and moral analysis.

① creating an excess of joy
② living a goal-oriented life
③ focusing on the present moment
④ accepting a given situation as it is
⑤ identifying a moral goal

40. 다음 글의 빈칸에 들어갈 말로 가장 적절한 것은?[40][23번 지문]

Environmental learning occurs when farmers base decisions on observations of "payoff" information. They may observe their own or neighbors' farms, but it is _____ they are using as a guide, not the neighbors themselves. They are looking at farming activities as experiments and assessing such factors as relative advantage, compatibility with existing resources, difficulty of use, and "trialability" — how well can it be experimented with. But that criterion of "trialability" turns out to be a real problem; it's true that farmers are always experimenting, but working farms are very flawed laboratories. Farmers cannot set up the controlled conditions of professional test plots in research facilities. Farmers also often confront complex and difficult-to-observe phenomena that would be hard to manage even if they could run controlled experiments. Moreover farmers can rarely acquire payoff information on more than a few of the production methods they might use, which makes the criterion of "relative advantage" hard to measure.

① the personal belief
② the creative output
③ the common knowledge
④ the empirical results
⑤ the obsolete information

41. 다음 글의 빈칸에 들어갈 말로 가장 적절한 것은?[41][24번 지문]

Not only musicians and psychologists, but also committed music enthusiasts and experts often voice the opinion that the beauty of music lies in an expressive deviation from the exactly defined score. Concert performances become interesting and gain in attraction from the fact that they go far beyond the information printed in the score. In his early studies on musical performance, Carl Seashore discovered that musicians only rarely play two equal notes in exactly the same way. Within the same metric structure, there is a wide potential of variations in tempo, volume, tonal quality and intonation. Such variation is based on the composition but diverges from it individually. We generally call this 'expressivity'. This explains why we do not lose interest when we hear different artists perform the same piece of music. It also explains why it is worthwhile for following generations to repeat the same repertoire. _____ help us to expand our understanding, which serves to enrich and animate the music scene.

① Signals that the interpretations are safe
② Signs that the interpretations are near
③ Triggers for the following response
④ New, inspiring interpretations
⑤ Marks that indicate the interpretations are wrong

42. 다음 글의 빈칸에 들어갈 말로 가장 적절한 것은?[42][29번 지문]

Recognizing ethical issues is the most important step in understanding business ethics. An ethical issue is an identifiable problem, situation, or opportunity that requires a person to choose from among several actions that may be evaluated as right or wrong, ethical or unethical. Learning how to choose from alternatives and make a decision requires not only good personal values, but also knowledge competence in the business area of concern. Employees also need to know when to rely on their organizations' policies and codes of ethics or have discussions with co-workers or managers on appropriate conduct. Ethical decision making is not always easy because _____, no matter how decisions are made. For instance, should an employee report on a co-worker engaging in time theft? Should a salesperson leave out facts about a product's poor safety record in his presentation to a customer? Such questions require the decision maker to evaluate the ethics of his or her choice and decide whether to ask for guidance.

① rights attach to groups as well as to individuals
② the notion of human rights is historically different
③ there are always gray areas that create dilemmas
④ our freedom ends where other people's rights begin
⑤ all rights are accompanied by corresponding obligations

43. 다음 글의 빈칸에 들어갈 말로 가장 적절한 것은?[43][30번 지문]

Although the wonders of modern technology have provided people with opportunities beyond the wildest dreams of our ancestors, the good, as usual, is weakened by a downside. One of those downsides is that anyone who so chooses can pick up the virtual megaphone that is the Internet and put in their two cents on any of an infinite number of topics, regardless of _____. After all, on the Internet, there are no regulations preventing a kindergarten teacher from offering medical advice or a physician from suggesting ways to safely make structural changes to your home. As a result, misinformation gets disseminated as information, and it is not always easy to differentiate the two. This can be particularly frustrating for scientists, who spend their lives learning how to understand the intricacies of the world around them, only to have their work summarily challenged by people whose experience with the topic can be measured in minutes. This frustration is then amplified by the fact that, to the general public, both the scientist and the challenger are awarded equal credibility.

① their expertise
② their qualifications
③ their flexibility
④ their compensation
⑤ their standardization

44. 다음 글의 빈칸에 들어갈 말로 가장 적절한 것은?[44][31번 지문]

More than just having territories, animals also _____. And this insight turned out to be particularly useful for zoo husbandry. An animal's territory has an internal arrangement that Heini Hediger compared to the inside of a person's house. Most of us assign separate functions to separate rooms, but even if you look at a one-room house you will find the same internal specialization. In a cabin or a mud hut, or even a Mesolithic cave from 30,000 years ago, this part is for cooking, that part is for sleeping; this part is for making tools and weaving, that part is for waste. We keep a neat functional organization. To a varying extent, other animals do the same. A part of an animal's territory is for eating, a part for sleeping, a part for swimming or wallowing, a part may be set aside for waste, depending on the species of animal.

① take a risk
② learn from mistakes
③ share an idea
④ forgive others
⑤ partition them

Because plants tend to recover from disasters more quickly than animals, they are essential to the revitalization of damaged environments. Why do plants have this preferential ability to recover from disaster? It is largely because, unlike animals, they can generate new organs and tissues throughout their life cycle. This ability is due to the activity of plant meristems — regions of undifferentiated tissue in roots and shoots that can, in response to specific cues, differentiate into new tissues and organs. If meristems are not damaged during disasters, plants can recover and ultimately _____. You can see this phenomenon on a smaller scale when a tree struck by lightning forms new branches that grow from the old scar. In addition to regeneration or resprouting of plants, disturbed areas can also recover through reseeding.

① help our mind get rid of unwanted thoughts
② lead us to answer the questions of who we are
③ transform the destroyed or barren environment
④ prevent us from realizing our true purpose in life
⑤ make us feel connected to the things around us

61. 다음 글의 빈칸에 들어갈 말로 가장 적절한 것은?[61][37번 지문]

Culture operates in ways we can consciously consider and discuss but also in ways of which we are far less cognizant. When we have to offer an account of our actions, we consciously understand which excuses might prove acceptable, given the particular circumstances we find ourselves in. In such situations, we use cultural ideas as we would use a particular tool. We select the cultural notion as we would select a screwdriver: certain jobs call for a Phillips head while others require an Allen wrench. Whichever idea we insert into the conversation to justify our actions, the point is that _____. They are not hidden. In some cases, however, we are far less aware of why we believe a certain claim to be true, or how we are to explain why certain social realities exist. Ideas about the social world become part of our worldview without our necessarily being aware of the source of the particular idea or that we even hold the idea at all.

① decisions pose no harm to society
② followers believe they need a boss
③ collective feelings of his society deem it fit
④ our motives are discursively available to us
⑤ optimistic attitude helps him cope with hardship

62. 다음 글의 빈칸에 들어갈 말로 가장 적절한 것은?[62][38번 지문]

In everyday life, we tend to see any collection of people as a group. However, social psychologists use this term more precisely. In particular, they define a group as two or more people who interact with, and exert mutual influences on, each other. It is this sense of _____ for a common purpose which distinguishes the members of a group from a mere aggregation of individuals. For example, as Kenneth Hodge observed, a collection of people who happen to go for a swim after work on the same day each week does not, strictly speaking, constitute a group because these swimmers do not interact with each other in a structured manner. By contrast, a squad of young competitive swimmers who train every morning before going to school is a group because they not only share a common objective (training for competition) but also interact with each other in formal ways (e.g., by warming up together beforehand). It is this sense of people coming together to achieve a common objective that defines a "team".

① signal that the food is safe
② sign that the mother is near
③ trigger for the pecking response
④ mutual interaction or inter-dependence
⑤ mark that indicates the chick's parent

63. 다음 글의 빈칸 (A), (B)에 들어갈 말로 가장 적절한 것은?[63][40번 지문]

A striving to demonstrate individual personality through designs should not be surprising. Most designers are educated to work as individuals, and design literature contains countless references to 'the designer'. Personal flair is without doubt an absolute necessity in some product categories, particularly relatively small objects, with a low degree of technological complexity, such as furniture, lighting, small appliances, and housewares. In larger-scale projects, ____**(A)**____, even where a strong personality exercises powerful influence, the fact that substantial numbers of designers are employed in implementing a concept can easily be overlooked. ____**(B)**____, the emphasis on individuality is problematic — rather than actually designing, many successful designer 'personalities' function more as creative managers. A distinction needs to be made between designers working truly alone and those working in a group. In the latter case, management organization and processes can be equally as relevant as designers' creativity.

	(A)	(B)
①	for example	Nevertheless
②	for example	Therefore
③	for example	In contrast
④	however	Therefore
⑤	however	In contrast

64. 다음 글의 빈칸에 들어갈 말로 가장 적절한 것은?[64][20번 지문]

Becoming competent in another culture means looking beyond behavior to see if we can understand the attitudes, beliefs, and values that motivate what we observe. By looking only at the visible aspects of culture — customs, clothing, food, and language — we develop a short-sighted view of intercultural understanding — just the tip of the iceberg, really. If we are to be successful in our business interactions with people who have different values and beliefs about how the world is ordered, then we must go below the surface of what it means to understand culture and attempt to see what Edward Hall calls the "hidden dimensions." Those hidden aspects are the very foundation of culture and are the reason why culture _____. We tend not to notice those cultural norms until they violate what we consider to be common sense, good judgment, or the nature of things.

① accepts their partner's demands
② gives up the act of loving others
③ offers help to the broken hearted
④ examines the reasons for this failure
⑤ is actually more than meets the eye

Climate change experts and environmental humanists alike agree that the climate crisis is, at its core, **(A)**_____ and much of the popular imagination is shaped by fiction. In his 2016 book The Great Derangement, anthropologist and novelist Amitav Ghosh takes on this relationship between imagination and environmental management, arguing that humans have failed to respond to climate change at least in part because **(B)**_____. Ghosh explains that climate change is largely absent from contemporary fiction because the cyclones, floods, and other catastrophes it brings to mind simply seem too "____**(G)**____" to belong in stories about everyday life. ____**(I)**____, climate change does not only **(C)**_____. ____**(J)**____, as environmentalists and ecocritics from Rachel Carson to Rob Nixon have pointed out, environmental change can be "____**(H)**____"; it **(D)**_____, only occasionally producing "explosive and spectacular" events. Most climate change impacts cannot be observed day-to-day, but they become visible when we **(E)**_____.

Climate change evades our imagination because it **(F)**_____. It cannot be observed in "human time," which is why documentary filmmaker Jeff Orlowski, who tracks climate change effects on glaciers and coral reefs, uses "before and after" photographs taken several months apart in the same place to highlight changes that occurred gradually.

You may feel there is something scary about an algorithm deciding what you might like. Could it mean that, if computers conclude you won't like something, you will never get the chance to see it? Personally, I really enjoy being directed toward new music that I might not have found by myself. I can quickly get stuck in a rut where I put on the same songs over and over. That's why I've always enjoyed the radio. But the algorithms that are now pushing and pulling me through the music library are perfectly suited to finding gems that I'll like. My worry originally about such algorithms was that they might drive everyone into certain parts of the library, leaving others lacking listeners. Would they cause a convergence of tastes? But thanks to the nonlinear and chaotic mathematics usually behind them, this doesn't happen. A small _____ in my likes compared to yours can send us off into different far corners of the library.

① similarity
② divergence
③ generosity
④ individuality
⑤ compliment

74. 다음 글의 빈칸에 들어갈 말로 가장 적절한 것은?[74][22번 지문]

Historically, drafters of tax legislation are attentive to questions of economics and history, and less attentive to moral questions. Questions of morality are often pushed to the side in legislative debate, labeled too controversial, too difficult to answer, or, worst of all, irrelevant to the project. But, in fact, the moral questions of taxation _____. Rather than irrelevant, moral questions are fundamental to the imposition of tax. Tax is the application of a society's theories of distributive justice. Economics can go a long way towards helping a legislature determine whether or not a particular tax law will help achieve a particular goal, but economics cannot, in a vacuum, identify the goal. Creating tax policy requires identifying a moral goal, which is a task that must involve ethics and moral analysis.

① clearly distinguish between right and wrong
② function as a source of constant disagreement
③ are at the very heart of the creation of tax laws
④ have a far wider sense than academic philosophy
⑤ raise questions that have already been answered in the past

75. 다음 글의 빈칸 (A), (B)에 들어갈 말로 가장 적절한 것은?[75][23번 지문]

Environmental learning occurs when farmers base decisions on observations of "payoff" information. They may observe their own or neighbors' farms, but it is the empirical results they are using as a guide, not the neighbors themselves. They are looking at farming activities as experiments and assessing such factors as relative advantage, compatibility with existing resources, difficulty of use, and "trialability" — how well can it be experimented with. ____**(A)**____, that criterion of "trialability" turns out to be a real problem; it's true that farmers are always experimenting, but working farms are very flawed laboratories. Farmers cannot set up the controlled conditions of professional test plots in research facilities. Farmers also often confront complex and difficult-to-observe phenomena that would be hard to manage even if they could run controlled experiments. ____**(B)**____, farmers can rarely acquire payoff information on more than a few of the production methods they might use, which makes the criterion of "relative advantage" hard to measure.

	(A)	(B)
①	Moreover	Instead
②	Moreover	Moreover
③	Moreover	However
④	However	Moreover
⑤	However	However

Not only musicians and psychologists, but also committed music enthusiasts and experts often voice the opinion that the beauty of music lies in _____ from the exactly defined score. Concert performances become interesting and gain in attraction from the fact that they go far beyond the information printed in the score. In his early studies on musical performance, Carl Seashore discovered that musicians only rarely play two equal notes in exactly the same way. Within the same metric structure, there is a wide potential of variations in tempo, volume, tonal quality and intonation. Such variation is based on the composition but diverges from it individually. We generally call this 'expressivity'. This explains why we do not lose interest when we hear different artists perform the same piece of music. It also explains why it is worthwhile for following generations to repeat the same repertoire. New, inspiring interpretations help us to expand our understanding, which serves to enrich and animate the music scene.

① an educational background
② motivation to achieve
③ a personal relationship
④ an expressive deviation
⑤ an unemployment experience

Recognizing ethical issues is the most important step in understanding business ethics. An ethical issue is an identifiable problem, situation, or opportunity that requires a person to choose from among several actions that may be evaluated as right or wrong, ethical or unethical. Learning how to choose from alternatives and make a decision requires not only good personal values, but also knowledge competence in the business area of concern. ____**(A)**____, employees need to know when to rely on their organizations' policies and codes of ethics or have discussions with co-workers or managers on appropriate conduct. Ethical decision making is not always easy because there are always gray areas that create dilemmas, no matter how decisions are made. ____**(B)**____, should an employee report on a co-worker engaging in time theft? Should a salesperson leave out facts about a product's poor safety record in his presentation to a customer? Such questions require the decision maker to evaluate the ethics of his or her choice and decide whether to ask for guidance.

	(A)	(B)
①	Furthermore	Therefore
②	Furthermore	However
③	Furthermore	For instance

Although the wonders of modern technology have provided people with opportunities beyond the wildest dreams of our ancestors, the good, as usual, _____. One of those downsides is that anyone who so chooses can pick up the virtual megaphone that is the Internet and put in their two cents on any of an infinite number of topics, regardless of their qualifications. After all, on the Internet, there are no regulations preventing a kindergarten teacher from offering medical advice or a physician from suggesting ways to safely make structural changes to your home. As a result, misinformation gets disseminated as information, and it is not always easy to differentiate the two. This can be particularly frustrating for scientists, who spend their lives learning how to understand the intricacies of the world around them, only to have their work summarily challenged by people whose experience with the topic can be measured in minutes. This frustration is then amplified by the fact that, to the general public, both the scientist and the challenger are awarded equal credibility.

① follows others' opinions
② is weakened by a downside
③ expects our future positively
④ learns better by imitating other
⑤ remembers what matters most to us

79. 다음 글의 빈칸에 들어갈 말로 가장 적절한 것은?[79][31번 지문]

More than just having territories, animals also partition them. And this insight turned out to be particularly useful for zoo husbandry. An animal's territory _____ that Heini Hediger compared to the inside of a person's house. Most of us assign separate functions to separate rooms, but even if you look at a one-room house you will find the same internal specialization. In a cabin or a mud hut, or even a Mesolithic cave from 30,000 years ago, this part is for cooking, that part is for sleeping; this part is for making tools and weaving, that part is for waste. We keep a neat functional organization. To a varying extent, other animals do the same. A part of an animal's territory is for eating, a part for sleeping, a part for swimming or wallowing, a part may be set aside for waste, depending on the species of animal.

① evaluates all things equally
② often purchases things impulsively
③ delays decisions to the last minute
④ prefers products frequently advertised
⑤ has an internal arrangement

80. 다음 글의 빈칸에 들어갈 말로 가장 적절한 것은?[80][32번 지문]

Fans feel for feeling's own sake. They make meanings beyond what seems to be on offer. They build identities and experiences, and make artistic creations of their own to share with others. A person can be an individual fan, feeling an "idealized connection with a star, strong feelings of memory and nostalgia," and engaging in activities like "collecting to develop a sense of self." But, more often, individual experiences are embedded in social contexts where other people with shared attachments _____. Much of the pleasure of fandom comes from being connected to other fans. In their diaries, Bostonians of the 1800s described being part of the crowds at concerts as part of the pleasure of attendance. A compelling argument can be made that what fans love is less the object of their fandom than the attachments to (and differentiations from) one another that those affections afford.

① cooperate with your competitors
② find the virtues of your neighbor
③ lose your inner peace of mind
④ hold on to your irritation with the person
⑤ socialize around the object of their affections

81. 다음 글의 빈칸에 들어갈 말로 가장 적절한 것은?[81][33번 지문]

There was nothing _____ about the idea of men making women's clothes — we saw them doing it for centuries in the past. In the old days, however, the client was always primary and her tailor was an obscure craftsman, perhaps talented but perhaps not. She had her own ideas like any patron, there were no fashion plates, and the tailor was simply at her service, perhaps with helpful suggestions about what others were wearing. Beginning in the late nineteenth century, with the hugely successful rise of the artistic male couturier, it was the designer who became celebrated, and the client elevated by his inspired attention. In a climate of admiration for male artists and their female creations, the dress-designer first flourished as the same sort of creator. Instead of the old rule that dressmaking is a craft, a modern connection between dress-design and art was invented that had not been there before.

① political
② physical
③ historical
④ economic
⑤ modern

82. 다음 글의 빈칸에 들어갈 말로 가장 적절한 것은?[82][34번 지문]

In trying to explain how different disciplines attempt to understand autobiographical memory the literary critic Daniel Albright said, "Psychology is a garden, literature is a wilderness." He meant, I believe, that psychology seeks to make patterns, find regularity, and ultimately impose order on human experience and behavior. Writers, by contrast, dive into the unruly, untamed depths of human experiences. What he said about understanding memory can be extended to our questions about young children's minds. If we psychologists are too bent on identifying the orderly pattern, the regularities of children's minds, we may miss an essential and pervasive characteristic of our topic: the child's more unruly and imaginative ways of talking and thinking. It is not only the developed writer or literary scholar who seems drawn toward _____; young children are as well. The psychologist interested in young children may have to venture a little more often into the wilderness in order to get a good picture of how children think.

① a somewhat wild and idiosyncratic way of thinking
② a mental simulation of what should not happen
③ a meaningful theory in the face of uncontrollable forces
④ an exercise of our imagination in saving us from disasters
⑤ a pointless assumption of an extreme event

83. 다음 글의 빈칸에 들어갈 말로 가장 적절한 것은?[83][35번 지문]

Because plants tend to recover from disasters more quickly than animals, they are essential to _____. Why do plants have this preferential ability to recover from disaster? It is largely because, unlike animals, they can generate new organs and tissues throughout their life cycle. This ability is due to the activity of plant meristems — regions of undifferentiated tissue in roots and shoots that can, in response to specific cues, differentiate into new tissues and organs. If meristems are not damaged during disasters, plants can recover and ultimately transform the destroyed or barren environment. You can see this phenomenon on a smaller scale when a tree struck by lightning forms new branches that grow from the old scar. In addition to regeneration or resprouting of plants, disturbed areas can also recover through reseeding.

① the manifestation of cultural harmony
② the necessity when exploring unique traditions
③ the revitalization of damaged environments
④ the great obstacle to development and progress
⑤ the means to overcome ignorance and prejudice

84. 다음 글의 빈칸에 들어갈 말로 가장 적절한 것은?[84][37번 지문]

Culture operates in ways we can consciously consider and discuss but also in ways of which we are far less cognizant. When we have to offer an account of our actions, we consciously understand which excuses might prove acceptable, given the particular circumstances we find ourselves in. In such situations, we use cultural ideas as we would use a particular tool. We select the cultural notion as we would select a screwdriver: certain jobs call for a Phillips head while others require an Allen wrench. Whichever idea we insert into the conversation to justify our actions, the point is that our motives are discursively available to us. They are not hidden. In some cases, however, we are far less aware of why we believe a certain claim to be true, or how we are to explain why certain social realities exist. Ideas about the social world become part of our worldview without _____ or that we even hold the idea at all.

① allowing yourself enough time to convey what you have in mind
② having your presentation well organized and keeping time properly
③ letting your audience ask questions, not in the middle, but at the end
④ our necessarily being aware of the source of the particular idea
⑤ starting, rather than ending, your presentation with your core message

85. 다음 글의 빈칸 (A), (B)에 들어갈 말로 가장 적절한 것은?[85][39번 지문]

Each new wave of technology is intended to enhance user convenience, as well as improve security, but sometimes these do not necessarily go hand-in-hand. ____**(A)**____, the transition from magnetic stripe to embedded chip slightly slowed down transactions, sometimes frustrating customers in a hurry. Make a service too burdensome, and the potential customer will go elsewhere. This obstacle applies at several levels. Passwords, double-key identification, and biometrics such as fingerprint-, iris-, and voice recognition are all ways of keeping the account details hidden from potential fraudsters, of keeping your data dark. ____**(B)**____, they all inevitably add a burden to the use of the account. On top of the hurdles introduced in accessing his or her money, if a suspected fraud is detected, the account holder has to deal with the phone call asking if he or she made the suspicious transactions. This is all useful at some level — indeed, it can be reassuring knowing that your bank is keeping alert to protect you — but it becomes tiresome if too many such calls are received.

	(A)	(B)
①	Nonetheless	Instead
②	Nonetheless	However
③	Nonetheless	Likewise
④	For example	However
⑤	For example	Likewise

We tend not to notice those cultural norms until they violate what we consider to be common sense, good judgment, or the nature of things.

① Becoming competent in another culture means looking beyond behavior to see if we can understand the attitudes, beliefs, and values that motivate what we observe. ② By looking only at the visible aspects of culture — customs, clothing, food, and language — we develop a short-sighted view of intercultural understanding — just the tip of the iceberg, really. ③ If we are to be successful in our business interactions with people who have different values and beliefs about how the world is ordered, then we must go below the surface of what it means to understand culture and attempt to see what Edward Hall calls the "hidden dimensions." ④ Those hidden aspects are the very foundation of culture and are the reason why culture is actually more than meets the eye. ⑤

But thanks to the nonlinear and chaotic mathematics usually behind them, this doesn't happen.

You may feel there is something scary about an algorithm deciding what you might like. Could it mean that, if computers conclude you won't like something, you will never get the chance to see it? Personally, I really enjoy being directed toward new music that I might not have found by myself. I can quickly get stuck in a rut where I put on the same songs over and over. ① That's why I've always enjoyed the radio. ② But the algorithms that are now pushing and pulling me through the music library are perfectly suited to finding gems that I'll like. ③ My worry originally about such algorithms was that they might drive everyone into certain parts of the library, leaving others lacking listeners. ④ Would they cause a convergence of tastes? ⑤ A small divergence in my likes compared to yours can send us off into different far corners of the library.

96. 글의 흐름으로 보아, 주어진 문장이 들어가기에 가장 적절한 것은?[96] [22번 지문]

Economics can go a long way towards helping a legislature determine whether or not a particular tax law will help achieve a particular goal, but economics cannot, in a vacuum, identify the goal.

Historically, drafters of tax legislation are attentive to questions of economics and history, and less attentive to moral questions. ① Questions of morality are often pushed to the side in legislative debate, labeled too controversial, too difficult to answer, or, worst of all, irrelevant to the project. ② But, in fact, the moral questions of taxation are at the very heart of the creation of tax laws. ③ Rather than irrelevant, moral questions are fundamental to the imposition of tax. ④ Tax is the application of a society's theories of distributive justice. ⑤ Creating tax policy requires identifying a moral goal, which is a task that must involve ethics and moral analysis.

Farmers cannot set up the controlled conditions of professional test plots in research facilities.

Environmental learning occurs when farmers base decisions on observations of "payoff" information. They may observe their own or neighbors' farms, but it is the empirical results they are using as a guide, not the neighbors themselves. ① They are looking at farming activities as experiments and assessing such factors as relative advantage, compatibility with existing resources, difficulty of use, and "trialability" — how well can it be experimented with. ② But that criterion of "trialability" turns out to be a real problem; it's true that farmers are always experimenting, but working farms are very flawed laboratories. ③ Farmers also often confront complex and difficult-to-observe phenomena that would be hard to manage even if they could run controlled experiments. ④ Moreover farmers can rarely acquire payoff information on more than a few of the production methods they might use, which makes the criterion of "relative advantage" hard to measure. ⑤

98. 글의 흐름으로 보아, 주어진 문장이 들어가기에 가장 적절한 것은?[98] [24번 지문]

This explains why we do not lose interest when we hear different artists perform the same piece of music.

Not only musicians and psychologists, but also committed music enthusiasts and experts often voice the opinion that the beauty of music lies in an expressive deviation from the exactly defined score. Concert performances become interesting and gain in attraction from the fact that they go far beyond the information printed in the score. In his early studies on musical performance, Carl Seashore discovered that musicians only rarely play two equal notes in exactly the same way. ① Within the same metric structure, there is a wide potential of variations in tempo, volume, tonal quality and intonation. ② Such variation is based on the composition but diverges from it individually. ③ We generally call this 'expressivity'. ④ It also explains why it is worthwhile for following generations to repeat the same repertoire. ⑤ New, inspiring interpretations help us to expand our understanding, which serves to enrich and animate the music scene.

99. 글의 흐름으로 보아, 주어진 문장이 들어가기에 가장 적절한 것은?[99] [29번 지문]

Ethical decision making is not always easy because there are always gray areas that create dilemmas, no matter how decisions are made.

Recognizing ethical issues is the most important step in understanding business ethics. An ethical issue is an identifiable problem, situation, or opportunity that requires a person to choose from among several actions that may be evaluated as right or wrong, ethical or unethical. ① Learning how to choose from alternatives and make a decision requires not only good personal values, but also knowledge competence in the business area of concern. ② Employees also need to know when to rely on their organizations' policies and codes of ethics or have discussions with co-workers or managers on appropriate conduct. ③ For instance, should an employee report on a co-worker engaging in time theft? ④ Should a salesperson leave out facts about a product's poor safety record in his presentation to a customer? ⑤ Such questions require the decision maker to evaluate the ethics of his or her choice and decide whether to ask for guidance.

Much of the pleasure of fandom comes from being connected to other fans.

Fans feel for feeling's own sake. They make meanings beyond what seems to be on offer. They build identities and experiences, and make artistic creations of their own to share with others. ① A person can be an individual fan, feeling an "idealized connection with a star, strong feelings of memory and nostalgia," and engaging in activities like "collecting to develop a sense of self." ② But, more often, individual experiences are embedded in social contexts where other people with shared attachments socialize around the object of their affections. ③ In their diaries, Bostonians of the 1800s described being part of the crowds at concerts as part of the pleasure of attendance. ④ A compelling argument can be made that what fans love is less the object of their fandom than the attachments to (and differentiations from) one another that those affections afford. ⑤

In a climate of admiration for male artists and their female creations, the dress-designer first flourished as the same sort of creator.

There was nothing modern about the idea of men making women's clothes — we saw them doing it for centuries in the past. ① In the old days, however, the client was always primary and her tailor was an obscure craftsman, perhaps talented but perhaps not. ② She had her own ideas like any patron, there were no fashion plates, and the tailor was simply at her service, perhaps with helpful suggestions about what others were wearing. ③ Beginning in the late nineteenth century, with the hugely successful rise of the artistic male couturier, it was the designer who became celebrated, and the client elevated by his inspired attention. ④ Instead of the old rule that dressmaking is a craft, a modern connection between dress-design and art was invented that had not been there before. ⑤

104. 글의 흐름으로 보아, 주어진 문장이 들어가기에 가장 적절한 것은?[104][34번 지문]

What he said about understanding memory can be extended to our questions about young children's minds.

In trying to explain how different disciplines attempt to understand autobiographical memory the literary critic Daniel Albright said, "Psychology is a garden, literature is a wilderness." ① He meant, I believe, that psychology seeks to make patterns, find regularity, and ultimately impose order on human experience and behavior. ② Writers, by contrast, dive into the unruly, untamed depths of human experiences. ③ If we psychologists are too bent on identifying the orderly pattern, the regularities of children's minds, we may miss an essential and pervasive characteristic of our topic: the child's more unruly and imaginative ways of talking and thinking. ④ It is not only the developed writer or literary scholar who seems drawn toward a somewhat wild and idiosyncratic way of thinking; young children are as well. ⑤ The psychologist interested in young children may have to venture a little more often into the wilderness in order to get a good picture of how children think.

If meristems are not damaged during disasters, plants can recover and ultimately transform the destroyed or barren environment.

Because plants tend to recover from disasters more quickly than animals, they are essential to the revitalization of damaged environments. ① Why do plants have this preferential ability to recover from disaster? ② It is largely because, unlike animals, they can generate new organs and tissues throughout their life cycle. ③ This ability is due to the activity of plant meristems — regions of undifferentiated tissue in roots and shoots that can, in response to specific cues, differentiate into new tissues and organs. ④ You can see this phenomenon on a smaller scale when a tree struck by lightning forms new branches that grow from the old scar. ⑤ In addition to regeneration or resprouting of plants, disturbed areas can also recover through reseeding.

106. 글의 흐름으로 보아, 주어진 문장이 들어가기에 가장 적절한 것은?[106][36번 지문]

For downstream passage, the process works the opposite way.

When two natural bodies of water stand at different levels, building a canal between them presents a complicated engineering problem. ① To make up for the difference in level, engineers build one or more water "steps," called locks, that carry ships or boats up or down between the two levels. A lock is an artificial water basin. ② It has a long rectangular shape with concrete walls and a pair of gates at each end. ③ When a vessel is going upstream, the upper gates stay closed as the ship enters the lock at the lower water level. The downstream gates are then closed and more water is pumped into the basin. ④ The rising water lifts the vessel to the level of the upper body of water. Then the upper gates open and the ship passes through. ⑤ The ship enters the lock from the upper level, and water is pumped from the lock until the ship is in line with the lower level.

107. 글의 흐름으로 보아, 주어진 문장이 들어가기에 가장 적절한 것은?[107][37번 지문]

In some cases, however, we are far less aware of why we believe a certain claim to be true, or how we are to explain why certain social realities exist.

Culture operates in ways we can consciously consider and discuss but also in ways of which we are far less cognizant. ① When we have to offer an account of our actions, we consciously understand which excuses might prove acceptable, given the particular circumstances we find ourselves in. ② In such situations, we use cultural ideas as we would use a particular tool. ③ We select the cultural notion as we would select a screwdriver: certain jobs call for a Phillips head while others require an Allen wrench. ④ Whichever idea we insert into the conversation to justify our actions, the point is that our motives are discursively available to us. They are not hidden. ⑤ Ideas about the social world become part of our worldview without our necessarily being aware of the source of the particular idea or that we even hold the idea at all.

A distinction needs to be made between designers working truly alone and those working in a group.

A striving to demonstrate individual personality through designs should not be surprising. Most designers are educated to work as individuals, and design literature contains countless references to 'the designer'. ① Personal flair is without doubt an absolute necessity in some product categories, particularly relatively small objects, with a low degree of technological complexity, such as furniture, lighting, small appliances, and housewares. ② In larger-scale projects, however, even where a strong personality exercises powerful influence, the fact that substantial numbers of designers are employed in implementing a concept can easily be overlooked. ③ The emphasis on individuality is therefore problematic — rather than actually designing, many successful designer 'personalities' function more as creative managers. ④ In the latter case, management organization and processes can be equally as relevant as designers' creativity. ⑤

109. 글의 흐름으로 보아, 주어진 문장이 들어가기에 가장 적절한 것은?[109][20번 지문]

Climate change experts and environmental humanists alike agree that the climate crisis is, at its core, a crisis of the imagination and much of the popular imagination is shaped by fiction. In his 2016 book The Great Derangement, anthropologist and novelist Amitav Ghosh takes on this relationship between imagination and environmental management, arguing that humans have failed to respond to climate change at least in part because fiction fails to believably represent it. ① Ghosh explains that climate change is largely absent from contemporary fiction because the cyclones, floods, and other catastrophes it brings to mind simply seem too "improbable" to belong in stories about everyday life. ② In fact, as environmentalists and ecocritics from Rachel Carson to Rob Nixon have pointed out, environmental change can be "imperceptible"; it proceeds gradually, only occasionally producing "explosive and spectacular" events. ③ Most climate change impacts cannot be observed day-to-day, but they become visible when we are confronted with their accumulated impacts. ④ It cannot be observed in "human time," which is why documentary filmmaker Jeff Orlowski, who tracks climate change effects on glaciers and coral reefs, uses "before and after" photographs taken several months apart in the same place to highlight changes that occurred gradually. ⑤

110. 글의 흐름으로 보아, 주어진 문장이 들어가기에 가장 적절한 것은?110)

But climate change does not only reveal itself as a series of extraordinary events.

111. 글의 흐름으로 보아, 주어진 문장이 들어가기에 가장 적절한 것은?111)

Climate change evades our imagination because it poses significant representational challenges.

Historically, drafters of tax legislation are attentive to questions of economics and history, and less attentive to moral questions. Questions of morality are often pushed to the side in legislative debate, labeled too controversial, too difficult to answer, or, worst of all, irrelevant to the project. ① But, in fact, the moral questions of taxation are at the very heart of the creation of tax laws. ② Rather than irrelevant, moral questions are fundamental to the imposition of tax. ③ Tax is the application of a society's theories of distributive justice. ④ Economics can go a long way towards helping a legislature determine whether or not a particular tax law will help achieve a particular goal, but economics cannot, in a vacuum, identify the goal. ⑤ If at this point you do not shrug off the negative communication and take action on your goal, then your skepticism will increase and you will reject the idea. Creating tax policy requires identifying a moral goal, which is a task that must involve ethics and moral analysis.

Environmental learning occurs when farmers base decisions on observations of "payoff" information. They may observe their own or neighbors' farms, but it is the empirical results they are using as a guide, not the neighbors themselves. They are looking at farming activities as experiments and assessing such factors as relative advantage, compatibility with existing resources, difficulty of use, and "trialability" — how well can it be experimented with. ① But that criterion of "trialability" turns out to be a real problem; it's true that farmers are always experimenting, but working farms are very flawed laboratories. ② Farmers cannot set up the controlled conditions of professional test plots in research facilities. ③ Farmers also often confront complex and difficult-to-observe phenomena that would be hard to manage even if they could run controlled experiments. ④ But we would never be able to prove it was final, because we could never be certain that a new experiment or phenomenon the next day might clash with the theory and require its further revision. ⑤ Moreover farmers can rarely acquire payoff information on more than a few of the production methods they might use, which makes the criterion of "relative advantage" hard to measure.

Not only musicians and psychologists, but also committed music enthusiasts and experts often voice the opinion that the beauty of music lies in an expressive deviation from the exactly defined score. Concert performances become interesting and gain in attraction from the fact that they go far beyond the information printed in the score. ① In his early studies on musical performance, Carl Seashore discovered that musicians only rarely play two equal notes in exactly the same way. ② Within the same metric structure, there is a wide potential of variations in tempo, volume, tonal quality and intonation. ③ They have variations in their shape and in the materials used, and also in the selection of exhibition objects. ④ Such variation is based on the composition but diverges from it individually. We generally call this 'expressivity'. ⑤ This explains why we do not lose interest when we hear different artists perform the same piece of music. It also explains why it is worthwhile for following generations to repeat the same repertoire. New, inspiring interpretations help us to expand our understanding, which serves to enrich and animate the music scene.

Recognizing ethical issues is the most important step in understanding business ethics. An ethical issue is an identifiable problem, situation, or opportunity that requires a person to choose from among several actions that may be evaluated as right or wrong, ethical or unethical. ① Learning how to choose from alternatives and make a decision requires not only good personal values, but also knowledge competence in the business area of concern. ② Employees also need to know when to rely on their organizations' policies and codes of ethics or have discussions with co-workers or managers on appropriate conduct. ③ Ethical decision making is not always easy because there are always gray areas that create dilemmas, no matter how decisions are made. ④ These conditions are not simply economic and political dimensions — a recognition that desirable values and good intentions must be supported by hard cash and tough decisions. ⑤ For instance, should an employee report on a co-worker engaging in time theft? Should a salesperson leave out facts about a product's poor safety record in his presentation to a customer? Such questions require the decision maker to evaluate the ethics of his or her choice and decide whether to ask for guidance.

Fans feel for feeling's own sake. They make meanings beyond what seems to be on offer. They build identities and experiences, and make artistic creations of their own to share with others. ① A person can be an individual fan, feeling an "idealized connection with a star, strong feelings of memory and nostalgia," and engaging in activities like "collecting to develop a sense of self." ② But, more often, individual experiences are embedded in social contexts where other people with shared attachments socialize around the object of their affections. ③ Much of the pleasure of fandom comes from being connected to other fans. ④ Commodified consumption is directly connected to the production process. ⑤ In their diaries, Bostonians of the 1800s described being part of the crowds at concerts as part of the pleasure of attendance. A compelling argument can be made that what fans love is less the object of their fandom than the attachments to (and differentiations from) one another that those affections afford.

There was nothing modern about the idea of men making women's clothes — we saw them doing it for centuries in the past. In the old days, however, the client was always primary and her tailor was an obscure craftsman, perhaps talented but perhaps not. ① She had her own ideas like any patron, there were no fashion plates, and the tailor was simply at her service, perhaps with helpful suggestions about what others were wearing. ② Beginning in the late nineteenth century, with the hugely successful rise of the artistic male couturier, it was the designer who became celebrated, and the client elevated by his inspired attention. ③ In a climate of admiration for male artists and their female creations, the dress-designer first flourished as the same sort of creator. ④ This law serves as a reminder that we are cocreators in the universe of our lives, but not codependent on it. ⑤ Instead of the old rule that dressmaking is a craft, a modern connection between dress-design and art was invented that had not been there before.

In trying to explain how different disciplines attempt to understand autobiographical memory the literary critic Daniel Albright said, "Psychology is a garden, literature is a wilderness." He meant, I believe, that psychology seeks to make patterns, find regularity, and ultimately impose order on human experience and behavior. ① Writers, by contrast, dive into the unruly, untamed depths of human experiences. ② What he said about understanding memory can be extended to our questions about young children's minds. ③ If we psychologists are too bent on identifying the orderly pattern, the regularities of children's minds, we may miss an essential and pervasive characteristic of our topic: the child's more unruly and imaginative ways of talking and thinking. ④ Balch's imaginative proposals for working together through the international authorities for solving peacefully the world's problems earned her her reputation among American peace activists as one of their intellectual leaders. ⑤ It is not only the developed writer or literary scholar who seems drawn toward a somewhat wild and idiosyncratic way of thinking; young children are as well. The psychologist interested in young children may have to venture a little more often into the wilderness in order to get a good picture of how children think.

When two natural bodies of water stand at different levels, building a canal between them presents a complicated engineering problem. To make up for the difference in level, engineers build one or more water "steps," called locks, that carry ships or boats up or down between the two levels. A lock is an artificial water basin. ① It has a long rectangular shape with concrete walls and a pair of gates at each end. ② When a vessel is going upstream, the upper gates stay closed as the ship enters the lock at the lower water level. ③ The downstream gates are then closed and more water is pumped into the basin. ④ The rising water lifts the vessel to the level of the upper body of water. ⑤ Its surface is made smooth and shiny so that it could reflect as well as clear still water does, and yet be more portable and convenient. Then the upper gates open and the ship passes through. For downstream passage, the process works the opposite way. The ship enters the lock from the upper level, and water is pumped from the lock until the ship is in line with the lower level.

Culture operates in ways we can consciously consider and discuss but also in ways of which we are far less cognizant. When we have to offer an account of our actions, we consciously understand which excuses might prove acceptable, given the particular circumstances we find ourselves in. ① In such situations, we use cultural ideas as we would use a particular tool. ② We select the cultural notion as we would select a screwdriver: certain jobs call for a Phillips head while others require an Allen wrench. ③ Whichever idea we insert into the conversation to justify our actions, the point is that our motives are discursively available to us. They are not hidden. ④ The threat of being deprived of needs generates strong contributive motives focused narrowly on personal or family wellbeing. ⑤ In some cases, however, we are far less aware of why we believe a certain claim to be true, or how we are to explain why certain social realities exist. Ideas about the social world become part of our worldview without our necessarily being aware of the source of the particular idea or that we even hold the idea at all.

A striving to demonstrate individual personality through designs should not be surprising. Most designers are educated to work as individuals, and design literature contains countless references to 'the designer'. ① Personal flair is without doubt an absolute necessity in some product categories, particularly relatively small objects, with a low degree of technological complexity, such as furniture, lighting, small appliances, and housewares. ② In larger-scale projects, however, even where a strong personality exercises powerful influence, the fact that substantial numbers of designers are employed in implementing a concept can easily be overlooked. ③ The emphasis on individuality is therefore problematic — rather than actually designing, many successful designer 'personalities' function more as creative managers. ④ A distinction needs to be made between designers working truly alone and those working in a group. ⑤ Engineers are experts because they have the ability to design products that take into account and mesh with a complex world of people, relationships, institutions, and artifacts. In the latter case, management organization and processes can be equally as relevant as designers' creativity.

"Daddy!" Jenny called, waving a yellow crayon in her little hand.

(A) Taking a closer look, Nathan recognized that it was his face. The face had two big eyes and a beard just like his. He loved Jenny's work. Filled with joy and happiness, Nathan gave her a big hug.

(B) Nathan approached her, wondering why she was calling him. Jenny, his three-year-old toddler, was drawing a big circle on a piece of paper. "What are you doing, Sweetie?" Nathan asked with interest.

(C) She just kept drawing without reply. He continued watching her, wondering what she was working on. She was drawing something that looked like a face. When she finished it, Jenny shouted, "Look, Daddy!" She held her artworkup proudly.

Becoming competent in another culture means looking beyond behavior to see if we can understand the attitudes, beliefs, and values that motivate what we observe.

(A) Those hidden aspects are the very foundation of culture and are the reason why culture is actually more than meets the eye. We tend not to notice those cultural norms until they violate what we consider to be common sense, good judgment, or the nature of things.

(B) If we are to be successful in our business interactions with people who have different values and beliefs about how the world is ordered, then we must go below the surface of what it means to understand culture and attempt to see what Edward Hall calls the "hidden dimensions."

(C) By looking only at the visible aspects of culture — customs, clothing, food, and language — we develop a short-sighted view of intercultural understanding — just the tip of the iceberg, really.

You may feel there is something scary about an algorithm deciding what you might like.

(A) Would they cause a convergence of tastes? But thanks to the nonlinear and chaotic mathematics usually behind them, this doesn't happen. A small divergence in my likes compared to yours can send us off into different far corners of the library.

(B) Could it mean that, if computers conclude you won't like something, you will never get the chance to see it? Personally, I really enjoy being directed toward new music that I might not have found by myself. I can quickly get stuck in a rut where I put on the same songs over and over.

(C) That's why I've always enjoyed the radio. But the algorithms that are now pushing and pulling me through the music library are perfectly suited to finding gems that I'll like. My worry originally about such algorithms was that they might drive everyone into certain parts of the library, leaving others lacking listeners.

Because plants tend to recover from disasters more quickly than animals, they are essential to the revitalization of damaged environments.

(A) You can see this phenomenon on a smaller scale when a tree struck by lightning forms new branches that grow from the old scar. In addition to regeneration or resprouting of plants, disturbed areas can also recover through reseeding.

(B) Why do plants have this preferential ability to recover from disaster? It is largely because, unlike animals, they can generate new organs and tissues throughout their life cycle.

(C) This ability is due to the activity of plant meristems — regions of undifferentiated tissue in roots and shoots that can, in response to specific cues, differentiate into new tissues and organs. If meristems are not damaged during disasters, plants can recover and ultimately transform the destroyed or barren environment.

A striving to demonstrate individual personality through designs should not be surprising. Most designers are educated to work as individuals, and design literature contains countless references to 'the designer'.

(A) A distinction needs to be made between designers working truly alone and those working in a group. In the latter case, management organization and processes can be equally as relevant as designers' creativity.

(B) In larger-scale projects, however, even where a strong personality exercises powerful influence, the fact that substantial numbers of designers are employed in implementing a concept can easily be overlooked. The emphasis on individuality is therefore problematic — rather than actually designing, many successful designer 'personalities' function more as creative managers.

(C) Personal flair is without doubt an absolute necessity in some product categories, particularly relatively small objects, with a low degree of technological complexity, such as furniture, lighting, small appliances, and housewares.

Climate change experts and environmental humanists alike agree that the climate crisis is, at its core, a crisis of the imagination and much of the popular imagination is shaped by fiction.

(A) Climate change evades our imagination because it poses significant representational challenges. It cannot be observed in "human time," which is why documentary filmmaker Jeff Orlowski, who tracks climate change effects on glaciers and coral reefs, uses "before and after" photographs taken several months apart in the same place to highlight changes that occurred gradually.

(B) In his 2016 book The Great Derangement, anthropologist and novelist Amitav Ghosh takes on this relationship between imagination and environmental management, arguing that humans have failed to respond to climate change at least in part because fiction fails to believably represent it. Ghosh explains that climate change is largely absent from contemporary fiction because the cyclones, floods, and other catastrophes it brings to mind simply seem too "improbable" to belong in stories about everyday life.

(C) But climate change does not only reveal itself as a series of extraordinary events. In fact, as environmentalists and ecocritics from Rachel Carson to Rob Nixon have pointed out, environmental change can be "imperceptible"; it proceeds gradually, only occasionally producing "explosive and spectacular" events. Most climate change impacts cannot be observed day-to-day, but they become visible when we are confronted with their accumulated impacts.

"Daddy!" Jenny called, **[waving / waved]** a yellow crayon in her little hand. Nathan **[approached / approached to]** her, **[wondering / wondered]** why she was calling him. Jenny, his three-year-old toddler, **[drawing / was drawing]** a big circle on a piece of paper. "What are you doing, Sweetie?" Nathan asked with interest. She just kept **[to draw / drawing]** without reply. He continued watching her, wondering **[that / what]** she was working on. She was drawing something **[that / what]** **[looked / looked like]** a face. When she finished it, Jenny shouted, "Look, Daddy!" She held her artworkup proudly. **[Taking / Taken]** a closer look, Nathan recognized **[that / what]** it was his face. The face had two big eyes and a beard just like **[him / his]**. He loved Jenny's work. **[Filling / Filled]** with joy and happiness, Nathan gave her a big hug.

[Become / Becoming] competent in another culture means looking beyond behavior to see **[what / if]** we can understand the attitudes, beliefs, and values that motivate **[that / what]** we observe. By looking only at the visible aspects of culture — customs, clothing, food, and language — we develop a short-sighted view of intercultural understanding — just the tip of the iceberg, really. If we are to be successful in our business interactions with people who have different values and beliefs about how the world **[orders / is ordered]**, then we must go below the surface of **[how / what]** it means to understand culture and attempt **[to see / seeing]** **[that / what]** Edward Hall calls the "hidden dimensions." Those **[hiding / hidden]** aspects are the very foundation of culture and are the reason **[which / why]** culture is actually more than **[meeting / meets]** the eye. We tend not **[to notice / meeting]** those cultural norms until they violate **[that / what]** we consider to be common sense, good judgment, or the nature of things.

162. 다음 글의 네모 안에서 문법상 맞는 말로 가장 적절한 것은?[서술형][162][21번 지문]

You may feel there is **[scary something / something scary]** about an algorithm **[deciding / decided]** **[that / what]** you might like. Could it mean **[that / what]**, if computers conclude you won't like something, you will never get the chance **[to see / seeing]** it? Personally, I really enjoy **[directing / being directed]** toward new music **[that / what]** I might not **[find / have found]** by myself. I can quickly get **[to stick / stuck]** in a rut **[which / where]** I put on the same songs over and over. That's **[because / why]** I've always enjoyed the radio. But the algorithms that are now pushing and pulling me through the music library **[perfectly suit / are perfectly suited]** to **[find / finding]** gems that I'll like. My worry originally about such algorithms **[was / were]** that they might drive everyone into certain parts of the library, **[leaving / left]** others **[lacking / lacked]** listeners. Would they cause a convergence of tastes? But thanks to the nonlinear and chaotic mathematics usually behind them, this doesn't happen. A small divergence in my likes **[comparing / compared]** to yours can send us off into different far corners of the library.

163. 다음 글의 네모 안에서 문법상 맞는 말로 가장 적절한 것은?[서술형][163][22번 지문]

Historically, drafters of tax legislation **[is / are]** attentive to questions of economics and history, and less attentive to moral questions. Questions of morality **[often push / are often pushed]** to the side in legislative debate, **[labelling / labeled]** too controversial, too difficult to answer, or, worst of all, **[irrelevant / irrelevantly]** to the project. But, in fact, the moral questions of taxation **[is / are]** at the very heart of the creation of tax laws. Rather than **[irrelevant / irrelevantly]**, moral questions are fundamental to the imposition of tax. Tax is the application of a society's theories of distributive justice. Economics can go a long way towards helping a legislature **[determining / determine]** whether or not a particular tax law will help **[achieve / achieving]** a particular goal, but economics cannot, in a vacuum, **[identify / identifying]** the goal. Creating tax policy requires **[to identify / identifying]** a moral goal, **[which / it]** is a task that must involve ethics and moral analysis.

Environmental learning **[occurs / is occurred]** when farmers **[are based / base]** decisions on observations of "payoff" information. They may observe their own or neighbors' farms, but it is the empirical results they are **[using / used]** as a guide, not the neighbors themselves. They are looking at farming activities as experiments and **[assess / assessing]** such factors as relative advantage, compatibility with **[existing / existed]** resources, difficulty of use, and "trialability" — how **[good / well]** can it **[experiment / be experimented]** with. But that criterion of "trialability" turns out **[to be / being]** a real problem; it's true **[that / what]** farmers are always experimenting, but working farms **[is / are]** very flawed laboratories. Farmers cannot set up the controlled conditions of professional test plots in research facilities. Farmers also often confront complex and difficult-to-observe phenomena **[that / what]** would be hard to manage even if they could run controlled experiments. Moreover farmers can rarely acquire payoff information on more than **[a few / a little]** of the production methods they might use, which **[make / makes]** the criterion of "relative advantage" **[hard / hardly]** to measure.

Not only musicians and psychologists, but also **[committing / committed]** music enthusiasts and experts often voice the opinion **[that / what]** the beauty of music **[lies / lays]** in an expressive deviation from the exactly **[defining / defined]** score. Concert performances become **[interesting / interested]** and gain in attraction from the fact **[that / what]** they go far beyond the information **[printing / printed]** in the score. In his early studies on musical performance, Carl Seashore discovered **[that / what]** musicians only rarely play two equal notes in **[exact / exactly]** the same way. Within the same metric structure, there is a wide potential of variations in tempo, volume, tonal quality and intonation. Such variation **[bases / is based]** on the composition but **[diverges / diverged]** from it individually. We generally call this 'expressivity'. This explains **[what / why]** we do not lose interest when we hear different artists **[perform / to perform]** the same piece of music. It also explains **[what / why]** it is worthwhile for following generations **[to repeat / repeating]** the same repertoire. New, inspiring interpretations **[help / helps]** us to expand our understanding, **[which / it]** serves to enrich and animate the music scene.

166. 다음 글의 네모 안에서 문법상 맞는 말로 가장 적절한 것은?[서술형][166][26번 지문]

Leon Festinger was an American social psychologist. He **[bore / was born]** in New York City in 1919 to a Russian immigrant family. As a graduate student at the University of Iowa, Festinger **[influenced / was influenced]** by Kurt Lewin, a leading social psychologist. After graduating from there, he became a professor at the Massachusetts Institute of Technology in 1945. He later moved to Stanford University, **[which / where]** he continued his work in social psychology. His theory of social comparison earned him a good reputation. Festinger actively participated in international **[scholar / scholarly]** cooperation. In the late 1970s, he turned his interest to the field of history. He was one of the most **[citing / cited]** **[psychologist / psychologists]** of the twentieth century. Festinger's theories still play an important role in psychology today.

167. 다음 글의 네모 안에서 문법상 맞는 말로 가장 적절한 것은?[서술형][167][29번 지문]

Recognizing ethical issues **[is / are]** the most important step in understanding business ethics. An ethical issue is an identifiable problem, situation, or opportunity **[that / what]** requires a person to choose from among several actions that may **[evaluate / be evaluated]** as right or wrong, ethical or unethical. **[Learn / Learning]** how to choose from alternatives and **[making / make]** a decision **[require / requires]** not only good personal values, but also knowledge competence in the business area of concern. Employees also need to know when to rely on their organizations' policies and codes of ethics or have discussions with co-workers or managers on appropriate conduct. Ethical decision making is not always easy because there are always gray areas **[that / what]** create dilemmas, **[how / no matter how]** decisions are made. For instance, should an employee report on a co-worker **[engaging / engaged]** in time theft? Should a salesperson leave out facts about a product's poor safety record in his presentation to a customer? Such questions require the decision maker **[to evaluate / evaluated]** the ethics of his or her choice and decide whether to ask for guidance.

Although the wonders of modern technology **[provided / have provided]** people with opportunities beyond the wildest dreams of our ancestors, the good, as usual, **[is weakened / weakened]** by a downside. One of those downsides **[is / are]** **[that / what]** anyone who so chooses can pick up the virtual megaphone **[that / what]** is the Internet and **[put / puts]** in their two cents on any of an infinite number of topics, regardless of their qualifications. After all, on the Internet, there are no regulations **[preventing / prevented]** a kindergarten teacher from offering medical advice or a physician from suggesting ways to safely **[make / makes]** structural changes to your home. As a result, misinformation gets **[to disseminate / disseminated]** as information, and it is not always easy to differentiate the two. This can be particularly **[frustrating / frustrated]** for scientists, who spend their lives **[to learn / learning]** how to understand the intricacies of the world around them, only **[to have / having]** their work summarily **[challenging / challenged]** by people **[whose / whom]** experience with the topic can **[measure / be measured]** in minutes. This frustration is then **[amplifying / amplified]** by the fact **[that / what]**, to the general public, **[both / either]** the scientist and the challenger **[award / are awarded]** equal credibility.

169. 다음 글의 네모 안에서 문법상 맞는 말로 가장 적절한 것은?[서술형][169][31번 지문]

More than just having territories, animals also partition them. And this insight turned out **[to be / being]** particularly useful for zoo husbandry. An animal's territory has an internal arrangement **[that / what]** Heini Hediger **[comparing / compared]** to the inside of a person's house. Most of us **[assign / assigns]** separate functions to separate rooms, but even if you look at a one-room house you will find the same internal specialization. In a cabin or a mud hut, or even a Mesolithic cave from 30,000 years ago, this part is for cooking, that part is for sleeping; this part is for making tools and weaving, that part is for waste. We keep a **[neat / neatly]** functional organization. To a varying extent, **[another / other]** animals do the same. A part of an animal's territory is for eating, a part for sleeping, a part for swimming or wallowing, a part may **[set / be set]** aside for waste, **[depending / depended]** on the species of animal.

170. 다음 글의 네모 안에서 문법상 맞는 말로 가장 적절한 것은?[서술형][170][32번 지문]

Fans feel for feeling's own sake. They make meanings beyond **[how / what]** seems to be on offer. They build identities and experiences, and make artistic creations of their own **[share / to share]** with others. A person can be an individual fan, **[feeling / felt]** an "idealized connection with a star, strong feelings of memory and nostalgia," and **[engaging / engaged]** in activities like "collecting to develop a sense of self." But, more often, individual experiences **[embed / are embedded]** in social contexts **[which / where]** other people with shared attachments socialize around the object of their affections. Much of the pleasure of fandom comes from **[connecting / being connected]** to other fans. In their diaries, Bostonians of the 1800s described **[being / to be]** part of the crowds at concerts as part of the pleasure of attendance. A compelling argument can **[make / be made]** **[that / what]** **[how / what]** fans love **[is / to be]** less the object of their fandom than the attachments to (and differentiations from) one another **[that / what]** those affections afford.

171. 다음 글의 네모 안에서 문법상 맞는 말로 가장 적절한 것은?[서술형][171][33번 지문]

There was **[modern nothing / nothing modern]** about the idea of men **[making / made]** women's clothes — we saw them **[to do / doing]** it for centuries in the past. In the old days, however, the client was always primary and her tailor was an obscure craftsman, perhaps **[talenting / talented]** but perhaps not. She had her own ideas **[like / alike]** any patron, there were no fashion plates, and the tailor was simply at her service, perhaps with helpful suggestions about **[how / what]** others were wearing. **[Beginning / Begun]** in the late nineteenth century, with the hugely successful rise of the artistic male couturier, **[which / it]** was the designer who became celebrated, and the client **[elevating / elevated]** by his inspired attention. In a climate of admiration for male artists and their female creations, the dress-designer first flourished as the same sort of creator. Instead of the old rule **[that / what]** dressmaking is a craft, a modern connection between dress-design and art **[invented / was invented]** **[that / what]** had not been there before.

172. 다음 글의 네모 안에서 문법상 맞는 말로 가장 적절한 것은?[서술형][172][34번 지문]

In trying to explain how different disciplines attempt **[to understand / understanding]** autobiographical memory the literary critic Daniel Albright said, "Psychology is a garden, literature is a wilderness." He meant, I believe, **[that / what]** psychology seeks **[to make / making]** patterns, find regularity, and ultimately **[impose / imposes]** order on human experience and behavior. Writers, by contrast, dive into the unruly, **[untaming / untamed]** depths of human experiences. **[That / What]** he said about understanding memory can **[extend / be extended]** to our questions about young children's minds. If we psychologists are too **[bending / bent]** on **[identification / identifying]** the orderly pattern, the regularities of children's minds, we may miss an essential and pervasive characteristic of our topic: the child's more unruly and imaginative ways of talking and thinking. It is not only the developed writer or literary scholar who seems **[to draw / drawn]** toward a somewhat wild and idiosyncratic way of thinking; young children are as well. The psychologist **[interested / is interested]** in young children may have to venture a little more often into the wilderness in order to get a good picture of **[what / how]** children think.

Because plants tend **[to recover / recovering]** from disasters more quickly than animals, they are essential to the revitalization of **[damaging / damaged]** environments. Why do plants have this preferential ability to recover from disaster? It is largely **[why / because]**, unlike animals, they can generate new organs and tissues throughout their life cycle. This ability is due to the activity of plant meristems — regions of **[undifferentiating / undifferentiated]** tissue in roots and shoots **[that / what]** can, in response to specific cues, **[differentiating / differentiate]** into new tissues and organs. If meristems are not **[damaging / damaged]** during disasters, plants can recover and ultimately transform the destroyed or barren environment. You can see this phenomenon on a smaller scale when a tree **[struck / is struck]** by lightning forms new branches that grow from the old scar. In addition to regeneration or resprouting of plants, **[disturbing / disturbed]** areas can also recover through reseeding.

174. 다음 글의 네모 안에서 문법상 맞는 말로 가장 적절한 것은?[서술형][174][36번 지문]

When two natural bodies of water **[stand / stands]** at different levels, building a canal between them **[present / presents]** a complicated engineering problem. To make up for the difference in level, engineers build one or more water "steps," **[calling / called]** locks, **[that / what]** carry ships or boats up or down between the two levels. A lock is an artificial water basin. It has a long rectangular shape with concrete walls and a pair of gates at each end. When a vessel is going upstream, the upper gates stay **[closing / closed]** as the ship enters the lock at the lower water level. The downstream gates **[then close / are then closed]** and more water **[pumps / is pumped]** into the basin. The **[rising / raising]** water lifts the vessel to the level of the upper body of water. Then the upper gates open and the ship passes through. For downstream passage, the process works the opposite way. The ship enters the lock from the upper level, and water **[pumps / is pumped]** from the lock until the ship is in line with the lower level.

175. 다음 글의 네모 안에서 문법상 맞는 말로 가장 적절한 것은?[서술형][175][37번 지문]

Culture operates in ways we can consciously consider and discuss but also in ways **[which / of which]** we are far less cognizant. When we have to offer an account of our actions, we consciously understand which excuses might prove **[acceptable / acceptably]**, **[giving / given]** the particular circumstances we find ourselves in. In such situations, we use cultural ideas as we would use a particular tool. We select the cultural notion as we would select a screwdriver: certain jobs call for a Phillips head while others require an Allen wrench. **[Whichever / However]** idea we insert into the conversation to justify our actions, the point is **[that / what]** our motives are discursively available to us. They are not **[hiding / hidden]**. In some cases, however, we are **[far / very]** less aware of why we believe a certain claim to be true, or how we are to explain why certain social realities **[exist / are existed]**. Ideas about the social world **[become / becomes]** part of our worldview without our necessarily **[to be / being]** aware of the source of the particular idea or **[that / what]** we even hold the idea at all.

176. 다음 글의 네모 안에서 문법상 맞는 말로 가장 적절한 것은?[서술형][176][38번 지문]

In everyday life, we tend **[to see / seeing]** any collection of people as a group. However, social psychologists use this term more precisely. In particular, they define a group as two or more people who interact with, and exert mutual influences on, each other. It is this sense of mutual interaction or inter-dependence for a common purpose which distinguishes the members of a group from a mere aggregation of individuals. For example, as Kenneth Hodge observed, a collection of people who happen **[to go / going]** for a swim after work on the same day each week **[do / does]** not, strictly speaking, **[constituting / constitute]** a group because these swimmers do not interact with each other in a structured manner. By contrast, a squad of young competitive swimmers who train every morning before going to school **[is / are]** a group because they not only share a common objective (training for competition) but also interact with each other in formal ways (e.g., by warming up together beforehand). It is this sense of people **[coming / came]** together to achieve a common objective that defines a "team".

Each new wave of technology **[intends / is intended]** to enhance user convenience, as well as improve security, but sometimes these do not necessarily go hand-in-hand. For example, the transition from magnetic stripe to **[embedding / embedded]** chip slightly slowed down transactions, sometimes **[frustrating / frustrated]** customers in a hurry. **[Make / Making]** a service too burdensome, and the potential customer will go elsewhere. This obstacle applies at several levels. Passwords, double-key identification, and biometrics such as fingerprint-, iris-, and voice recognition **[is / are]** all ways of keeping the account details **[hiding / hidden]** from potential fraudsters, of keeping your data dark. But they all inevitably add a burden to the use of the account. On top of the hurdles **[introducing / introduced]** in accessing his or her money, if a suspected fraud **[detects / is detected]**, the account holder has to deal with the phone call **[asking / asked]** if he or she made the suspicious transactions. This is all useful at some level — indeed, it can be reassuring **[knowing / known]** **[that / what]** your bank is keeping alert to protect you — but it becomes tiresome if too many such calls **[receive / are received]**.

178. 다음 글의 네모 안에서 문법상 맞는 말로 가장 적절한 것은?[서술형][178][40번 지문]

A striving **[to demonstrate / demonstrating]** individual personality through designs should not be surprising. Most designers **[educate / are educated]** to work as individuals, and design literature contains countless references to 'the designer'. Personal flair is without doubt an absolute necessity in some product categories, particularly relatively small objects, with a low degree of technological complexity, such as furniture, lighting, small appliances, and housewares. In larger-scale projects, however, even **[which / where]** a strong personality exercises powerful influence, the fact **[that / what]** substantial numbers of designers **[are employed / employed]** in implementing a concept can easily **[overlook / be overlooked]**. The emphasis on individuality is therefore problematic — rather than actually designing, many successful designer 'personalities' **[function / functions]** more as creative managers. A distinction needs **[to make / making]** between designers **[working / work]** truly alone and **[that / those]** working in a group. In the latter case, management organization and processes can be equally as **[relevant / relevantly]** as designers' creativity.

To be good at _____ with people from other cultures, you need to know the _____ side of the culture.

🌼 다음 글을 읽고 물음에 답하시오.[21번 지문]

You may feel there is something **(A)[happy / scary]** about an algorithm **(B)decide** what you might like. Could it mean that, if computers conclude you won't like something, you will **(C)[always / never]** get the chance **(D)see** it? Personally, I really enjoy **(E)direct** toward new music that I might not **(F)find** **(G)[by myself / in company with]**. I can quickly get **(H)stick** in a rut where I put on the same songs over and over. That's **(I)because** I've always enjoyed the radio. But the algorithms that are now pushing and pulling me through the music library **(J)be** **(K)[perfectly / imperfectly]** suited to **(L)find** gems that I'll like. My worry originally about such algorithms was that they might drive everyone into certain parts of the library, **(M)leave** others **(N)[abounding / lacking]** listeners. Would they cause a **(O)[convergence / divergence]** of tastes? But thanks to the nonlinear and **(P)[ordered / chaotic]** mathematics usually behind them, **(Q)this** doesn't happen. A small **(R)[convergence / divergence]** in my likes **(S)compare** to yours can **(T)send us off into different far corners of the library**.

It is important to set _____ goals when making _____.

다음 글을 읽고 물음에 답하시오.[23번 지문]

Environmental learning occurs when farmers base decisions on **(A)**_____ of **(B)**_____. They may observe their own or neighbors' farms, but it is the **(C)[empirical / virtual]** results they are using as a guide, not the neighbors themselves. They are looking at farming activities as experiments and assessing such factors as **(D)[absolute / relative]** advantage, **(E)**_____ with existing resources, difficulty of use, and "**(F)**_____" — how well can it be experimented with. But that criterion of "**(G)**_____" turns out to be a real problem; it's true that farmers are always experimenting, but working farms are very **(H)[flawed / flawless]** laboratories. Farmers cannot set up the **(I)**_____ of professional test plots in research facilities. Farmers also often **(J)[confront / evade]** complex and difficult-to-observe phenomena that would be **(K)[easy / hard]** to manage even if they could run controlled experiments. Moreover farmers can rarely **(L)[enquire / acquire]** **(M)**_____ on more than a few of the production methods they might use, which makes the criterion of "**(N)**_____" **(O)[easy / hard]** to measure.

[보기][중복 사용 가능][필요시 변형]

compatibility / controlled conditions / observations / payoff information / relative advantage / trialability

Due to the _____ of musical performances, we _____ our interest in music, and as a result, the music industry becomes rich and _____

다음 글을 읽고 물음에 답하시오.[29번 지문]

(A)[Recognizing / Harmonizing] ethical issues is the most important step in understanding business ethics. An ethical issue is an **(B)[identifiable / unidentifiable]** problem, situation, or opportunity that requires a person to choose from among several actions that may be evaluated as right or wrong, ethical or unethical. Learning how to choose from alternatives and make a decision requires not only good personal values, but also knowledge **(C)[competition / competence]** in the business area of concern. Employees also need to know when to rely on their organizations' policies and codes of ethics or have discussions with co-workers or managers on **(D)[appropriate / inappropriate]** conduct. Ethical decision making is not always easy because there are always gray areas that create **(E)[dilemmas / diplomas]**, no matter how decisions are made. For instance, should an employee report on a co-worker engaging in time theft? Should a salesperson leave out facts about a product's **(F)[rich / poor]** safety record in his presentation to a customer? Such questions require the decision maker to **(G)[punctuate / evaluate]** the ethics of his or her choice and decide whether to ask for **(H)[guidance / substance]**.

Free expression of opinion on the Internet causes scientists to be _____ by _____ people, and scientists' _____ will increase if they are given _____ trust in both scientists and challengers

🌼 다음 글을 읽고 물음에 답하시오.[31번 지문]

More than just having territories, animals also **(A)[partition / condition]** them. And this insight turned out to be particularly useful for zoo **(B)[husbandry / wastefulness]**. An animal's territory has an **(C)[internal / external]** arrangement that Heini Hediger compared to the inside of a person's house. Most of us assign separate functions to separate rooms, but even if you look at a one-room house you will find the same **(D)[internal / external]** **(E)[generation / specialization]**. In a cabin or a mud hut, or even a Mesolithic cave from 30,000 years ago, this part is for cooking, that part is for sleeping; this part is for making tools and weaving, that part is for waste. We keep a neat **(F)[functional / professional]** organization. To a varying extent, other animals do the same. A part of an animal's territory is for eating, a part for sleeping, a part for swimming or wallowing, a part may be **(G)[set aside / step aside]** for waste, depending on the species of animal.

Animal areas, like human housing, are _____ according to _____

다음 글을 읽고 물음에 답하시오.[32번 지문]

Fans feel for feeling's own sake. They make meanings **(A)beyond what seems to be on offer.** They **(B)[build / lose]** identities and experiences, and make artistic creations of their own to share with others. A person can be an individual fan, feeling an "**(C)[civilized / idealized]** connection with a star, strong feelings of memory and nostalgia," and **(D)engage** in activities like "**(E)[collecting / correcting]** to develop a sense of self." But, more often, individual experiences **(F)embed** in **(G)[commercial / social]** contexts **(H)which** other people with shared attachments **(I)[socialize / generalize]** around the object of their affections. Much of the pleasure of fandom comes from **(J)connect** to other fans. In their diaries, Bostonians of the 1800s described **(K)be** part of the crowds at concerts as part of the pleasure of **(L)[appearance / attendance]**. A compelling argument can **(M)make** that what fans love **(N)be** **(O)[more / less]** the object of their fandom than the attachments to (and differentiations from) one another that those affections **(P)[afford / lack]**.

다음 글을 읽고 물음에 답하시오.[35번 지문]

Because plants tend to recover from disasters more quickly than animals, they are essential to the **(A)[application / revitalization]** of **(B)damaged environments**. Why do plants have this **(C)[preferential / confidential]** ability to recover from disaster? It is largely because, unlike animals, they can **(D)[generate / remove]** new organs and tissues throughout their life cycle. This ability is due to the activity of plant meristems — regions of **(E)[differentiated / undifferentiated]** tissue in roots and shoots that can, in response to specific cues, **(F)[consubstantiate / differentiate]** into new tissues and organs. If meristems are not damaged during disasters, plants can recover and ultimately **(G)[transform / conform to]** the destroyed or **(H)[fertile / barren]** environment. You can see this phenomenon on a smaller scale when a tree struck by lightning forms new branches that grow from the old scar. In addition to regeneration or resprouting of plants, **(I)disturbed areas** can also recover through reseeding.

Plants, unlike animals, tend to _____ faster from disasters because they can create _____ organs and cell tissues throughout their life cycle

다음 글을 읽고 물음에 답하시오.[36번 지문]

When two natural bodies of water stand at different levels, building a canal between them presents a **(A)[simplified / complicated]** engineering problem. To **(B)[stand up for / make up for]** the difference in level, engineers build one or more water "steps," called locks, that carry ships or boats up or down between the two levels. A lock is an **(C)[natural / artificial]** water basin. It has a long **(D)[rectangular / circular]** shape with concrete walls and a pair of gates at each end. When a vessel is going upstream, the upper gates stay **(E)[open / closed]** as the ship enters the lock at the lower water level. The downstream gates are then closed and more water is pumped into the basin. The rising water **(F)[lifts / lowers]** the vessel to the level of the upper body of water. Then the upper gates open and the ship passes through. For downstream passage, the process works the **(G)[same / opposite]** way. The ship enters the **(H)[lock / rock]** from the upper level, and water is pumped from the lock until the ship is in line with the **(I)[higher / lower]** level.

다음 글을 읽고 물음에 답하시오.[37번 지문]

Culture operates in ways we can **(A)[consciously / unconsciously]** consider and discuss but also in ways of which we are far less cognizant. When we have to offer an account of our actions, we consciously understand which excuses might prove **(B)[acceptable / unacceptable]**, **(C)**우리가 처한 특정한 상황 하에. In such situations, we use **(D)[cultural]** ideas as we would use a particular tool. We select the **(E)[cultural / central]** notion as we would select a screwdriver: certain jobs call for a Phillips head while others require an Allen wrench. Whichever idea we insert into the conversation to **(F)[justify / simplify]** our actions, the point is that our motives are discursively **(G)[available / unavailable]** to us. They are not hidden. In some cases, however, we are far **(H)[more aware / less aware]** of why we believe a certain claim to be true, or how we are to explain why certain **(I)[social / immoral]** realities exist. Ideas about the social world become part of our worldview **(J)**우리가 특정한 관념의 출처에 대해서 반드시 알고 있지 않은 상태에서도 or that we even **(K)[hold / abandon]** the idea at all.

🌼 다음 글을 읽고 물음에 답하시오.[38번 지문]

In everyday life, we tend to see any collection of people as a group. However, social psychologists use this term more **(A)[precisely / incorrectly]**. In particular, they **(B)[define / confine]** a group as two or more people who interact with, and exert **(C)[peremptory / mutual]** influences on, each other. It is this sense of mutual interaction or **(D)**_____ for a common purpose which distinguishes the members of a group from a **(E)**_____ of individuals. For example, as Kenneth Hodge observed, a collection of people who happen to go for a swim after work on the same day each week does not, strictly speaking, **(F)[constitute / institute]** a group because these swimmers do not interact with each other in a **(G)**_____. By contrast, a squad of young **(H)[competitive / repetitive]** swimmers who train every morning before going to school is a group because they not only **(I)[share / monopolize]** a **(J)**_____ (training for competition) but also interact with each other in **(K)[formal / informal]** ways (e.g., by warming up together beforehand). It is this sense of people coming together to **(L)[achieve / receive]** a **(M)**_____ that defines a "team".

403. 위 글의 밑줄 친 (D)부분을 문법상 옳은 표현으로 고쳐 적으시오.[서술형Ⅰ옳은 표현이면 그대로 적으시오.]403)

404. 위 글의 괄호 (E)부분 안에서 문맥에 맞는 낱말로 가장 적절한 것을 고르시오.[서술형]404)

405. 위 글의 밑줄 친 (F)부분을 문법상 옳은 표현으로 고쳐 적으시오.[서술형Ⅰ옳은 표현이면 그대로 적으시오.]405)

406. 위 글의 밑줄 친 (G)부분을 문법상 옳은 표현으로 고쳐 적으시오.[서술형Ⅰ옳은 표현이면 그대로 적으시오.]406)

407. 위 글의 괄호 (H)부분 안에서 문맥에 맞는 낱말로 가장 적절한 것을 고르시오.[서술형]407)

408. 위 글의 괄호 (I)부분 안에서 문맥에 맞는 낱말로 가장 적절한 것을 고르시오.[서술형]408)

409. 위 글의 밑줄 친 (J)부분의 우리말을 필요시 변형하여 영어로 적으시오.[서술형]409)

all / details / are / hide / keep / ways / of / the / fraudsters / account / from / potential

410. 위 글의 괄호 (K)부분 안에서 문맥에 맞는 낱말로 가장 적절한 것을 고르시오.[서술형]410)

411. 위 글의 괄호 (L)부분 안에서 문맥에 맞는 낱말로 가장 적절한 것을 고르시오.[서술형]411)

412. 위 글의 괄호 (M)부분 안에서 문맥에 맞는 낱말로 가장 적절한 것을 고르시오.[서술형]412)

413. 위 글의 밑줄 친 (N)부분을 문법상 옳은 표현으로 고쳐 적으시오.[서술형Ⅰ옳은 표현이면 그대로 적으시오.]413)

414. 위 글의 밑줄 친 (O)부분을 문법상 옳은 표현으로 고쳐 적으시오.[서술형Ⅰ옳은 표현이면 그대로 적으시오.]414)

415. 위 글의 밑줄 친 (P)부분을 문법상 옳은 표현으로 고쳐 적으시오.[서술형Ⅰ옳은 표현이면 그대로 적으시오.]415)

416. 위 글의 괄호 (Q)부분 안에서 문맥에 맞는 낱말로 가장 적절한 것을 고르시오.[서술형]416)

417. 위 글의 밑줄 친 (R)부분을 문법상 옳은 표현으로 고쳐 적으시오.[서술형Ⅰ옳은 표현이면 그대로 적으시오.]417)

418. 위 글의 괄호 (S)부분 안에서 문맥에 맞는 낱말로 가장 적절한 것을 고르시오.[서술형]418)

419. 위 글의 밑줄 친 (T)부분을 문법상 옳은 표현으로 고쳐 적으시오.[서술형Ⅰ옳은 표현이면 그대로 적으시오.]419)

다음 글을 읽고 물음에 답하시오.[420번 지문]

A striving **(A)demonstrate** individual **(B)[personality / responsibility]** through designs should not be surprising. Most designers **(C)educate** to work as individuals, and design literature contains countless **(D)[references / confidences]** to 'the designer'. Personal flair is without doubt a(n) **(E)[absolute / relative]** necessity in some product categories, particularly relatively small objects, with a **(F)[high / low]** degree of technological complexity, such as furniture, lighting, small appliances, and housewares. In larger-scale projects, however, even **(G)which** a **(H)[strong / weak]** personality exercises powerful influence, the fact that **(I)[commercial / substantial]** numbers of designers **(J)employ** in **(K)[implementing / complementing]** a concept can easily **(L)overlook**. The emphasis on **(M)**_____ is therefore **(N)[democratic / problematic]** — rather than actually designing, many successful designer 'personalities' **(O)function** **(P)[more / less]** as creative managers. A **(Q)[distinction / reaction]** needs **(R)to be made** between designers working truly alone and **(S)that** working in a group. In the latter case, management organization and processes can be equally as **(T)[relevant / irrelevant]** as designers' creativity.

420. 위 글의 밑줄 친 (A)부분을 문법상 옳은 표현으로 고쳐 적으시오.[서술형][옳은 표현이면 그대로 적으시오.]420)

421. 위 글의 괄호 (B)부분 안에서 문맥에 맞는 낱말로 가장 적절한 것을 고르시오.[서술형]421)

439. 위 글의 괄호 (T)부분 안에서 문맥에 맞는 낱말로 가장 적절한 것을 고르시오.[서술형]439)

440. 위 글을 요약하고자 한다. 다음 빈칸에 들어갈 말을 적으시오.[서술형]440)

Depending on the _____ of a project, the capacity of designers to _____ team-based working environments can be just as important as their personal qualities.

다음 글을 읽고 물음에 답하시오.[41-42번 지문]

Climate change experts and environmental humanists **(A)alike** agree that the climate crisis is, at its core, a crisis of the **(B)[application / imagination]** and much of the popular imagination **(C)shape** by **(D)[fiction / action]**. In his 2016 book The Great Derangement, anthropologist and novelist Amitav Ghosh takes on this relationship between imagination and environmental management, **(E)argue** that humans have failed to respond to climate change at least in part because fiction **(F)[succeeds / fails]** to believably represent it. Ghosh explains that climate change is largely **(G)[present to / absent from]** contemporary fiction because the cyclones, floods, and other catastrophes it **(H)bring** to mind simply **(I)seem** too "**(J)[probable / improbable]**" to belong in stories about everyday life. But climate change does not only **(K)[reveal / conceal]** itself as a series of **(L)[ordinary / extraordinary]** events. In fact, as environmentalists and ecocritics from Rachel Carson to Rob Nixon **(M)have** pointed out, environmental change can be "**(N)[perceptible / imperceptible]**"; it proceeds **(O)[rapidly / gradually]**, only occasionally **(P)producing** "**(Q)[explosive / exclusive]** and spectacular" events. Most climate change impacts cannot **(R)observe** day-to-day, but they become **(S)[visible / invisible]** when we **(T)confront** with their **(U)[accumulated / reduced]** impacts.

Climate change **(V)[accepts / evades]** our imagination because it poses significant representational challenges. It cannot **(W)observe** in "human time," which is **(X)because** documentary filmmaker Jeff Orlowski, who tracks climate change effects on glaciers and coral reefs, **(Y)use** "before and after" photographs **(Z)take** several months apart in the same place to **(AB)[highlight / ignore]** changes that occurred **(AC)[rapidly / gradually]**.

The S_____ of I_____ in R_____ C_____ C_____

470. 위 글을 요약하고자 한다. 다음 빈칸에 들어갈 말을 적으시오.[서술형][470)]

The climate crisis is fundamentally a crisis of _____, and the big disasters that climate change reminds us of are far from our _____ as they are _____ to belong to stories of _____

다음 글을 읽고 물음에 답하시오.[43-45번 지문]

(A)Walk out of Charing Cross Station in London, Emilia and her traveling companion, Layla, already felt their hearts **(B)pound**. It was the second day of their European summer trip. They were about **(C)visit** one of the world's most famous art galleries. The two of them started hurrying with excitement. Suddenly, Emilia shouted, "Look! There it is! We're finally at the National Gallery!" Layla laughed and responded, "Your dream's finally come true!" Upon **(D)enter** the National Gallery, Emilia knew exactly where to go first. She grabbed Layla's hand and dragged her hurriedly to find van Gogh's Sunflowers. It was Emilia's favorite painting and had inspired her **(E)become** a painter. Emilia loved his use of bright colors and light. She couldn't wait to finally see his masterpiece in person. "It'll be **(F)amaze** to see how he communicated the feelings of isolation and loneliness in his work," she said eagerly.

However, after searching all the exhibition rooms, Emilia and Layla couldn't find van Gogh's masterpiece anywhere. "That's weird. Van Gogh's Sunflowers should be here. Where is it?" Emilia looked upset, but Layla kept **(G)calm** and said, "Maybe you've missed a notice about it. Check the National Gallery app." Emilia checked it quickly. Then, she sighed, "Sunflowers isn't here! It's **(H)lend** to a different gallery for a special exhibition. I can't believe I didn't check!" "Don't lose hope yet! Which gallery is the special exhibition at?" Layla asked. Emilia responded, "Well, his Sunflowers is still in England, but it's at a gallery in Liverpool. That's a long way, isn't it?" After a quick search on her phone, Layla stated, "No! It's only two hours to Liverpool by train. The next train leaves in an hour. Why don't we take it?" After considering the idea, Emilia, now **(I)relieve**, responded, "Yeah, but you always wanted to see Rembrandt's paintings. Let's do that first, Layla! Then, after lunch, we can catch the next train." Layla smiled brightly.

471. 위 글의 밑줄 친 (A)부분을 문법상 옳은 표현으로 고쳐 적으시오.[서술형Ⅰ옳은 표현이면 그대로 적으시오.][471)]

472. 위 글의 밑줄 친 (B)부분을 문법상 옳은 표현으로 고쳐 적으시오.[서술형Ⅰ옳은 표현이면 그대로 적으시오.][472)]

230) are often pushed
231) labeled
232) controversial
233) irrelevant
234) are
235) creation
236) fundamental
237) distributive
238) determine
239) achieve
240) vacuum
241) identify
242) identifying
243) involve
244) moral, tax laws
245) observations
246) payoff information
247) empirical
248) relative
249) compatibility
250) trialability
251) trialability
252) flawed
253) controlled conditions
254) confront
255) hard
256) acquire
257) payoff information
258) relative advantage
259) hard
260) limitations of using empirical observations in farming
261) relative, advantage, empirical, constraints, reality
262) voice
263) expressive
264) deviation
265) defined
266) gain
267) rarely
268) equal
269) variation
270) variation
271) individually
272) expressivity
273) lose
274) repeat
275) inspiring
276) interpretations
277) expand
278) enrich
279) Never the Same: The Value of Variation in Music Performance

280) expressiveness, maintain, vibrant
281) Recognizing
282) identifiable
283) competence
284) appropriate
285) dilemmas
286) poor
287) evaluate
288) guidance
289) was born
290) was influenced
291) where
292) scholarly
293) cited
294) have provided
295) is weakened
296) downside
297) is
298) put
299) qualifications
300) regulations
301) preventing
302) make
303) misinformation
304) disseminated
305) frustrating
306) learning
307) only to have their work summarily challenged by people whose experience with the topic can be measured in minutes
308) amplified
309) are awarded
310) credibility
311) challenged, inexperienced, frustration, equal
312) partition
313) husbandry
314) internal
315) internal
316) specialization
317) functional
318) set aside
319) divided, function
320) 팬이 사랑하는 것은 팬덤의 대상이라기보다 팬들 서로 간의 애착이다
321) build
322) idealized
323) engaging
324) collecting
325) are embedded
326) social
327) where
328) socialize
329) being connected
330) being
331) attendance
332) be made
333) is
334) less
335) afford
336) object, attachment
337) modern
338) making women's clothes
339) obscure
340) no fashion
341) helpful suggestions
342) it was the designer who became celebrated, and the client elevated by his inspired attention
343) flourished
344) old rule
345) craft
346) art
347) artistic, respected, artists
348) autobiographical
349) garden
350) wilderness
351) regularity
352) impose
353) miss
354) The psychologist interested in young children may have to venture a little more often into the wilderness
355) ③ the orderly pattern, the regularities of children's minds
356) How psychology and literature understand autobiographical memories
357) revitalization
358) the destroyed or barren environment
359) preferential
360) generate
361) undifferentiated
362) differentiate
363) transform
364) barren
365) damaged areas from disaster
366) recover, novel
367) complicated
368) make up for
369) artificial
370) rectangular
371) closed
372) lifts
373) opposite
374) lock
375) lower
376) consciously
377) acceptable
378) given the particular circumstances we find ourselves in
379) cultural
380) cultural
381) justify

382) available
383) less aware
384) social
385) without our necessarily being aware of the source of the particular idea
386) hold
387) precisely
388) define
389) mutual
390) interdependence
391) mere aggregation
392) constitute
393) structured manner
394) competitive
395) share
396) common objective
397) formal
398) achieve
399) common objective
400) is intended
401) enhance
402) if it improves security, user convenience is reduced
403) embedded
404) slowed down
405) frustrating
406) Make
407) burdensome
408) obstacle
409) are all ways of keeping the account details hidden from potential fraudsters
410) dark
411) add
412) hurdles
413) introduced
414) is detected
415) asking
416) suspicious
417) knowing
418) tiresome
419) are received
420) to demonstrate
421) personality
422) are educated
423) references
424) absolute
425) low
426) where
427) strong
428) substantial
429) are employed
430) implementing
431) be overlooked
432) individuality
433) problematic
434) function
435) more
436) distinction
437) making
438) those
439) relevant
440) size, coordinate
441) alike
442) imagination
443) is shaped
444) fiction
445) arguing
446) fails
447) absent from
448) brings
449) seem
450) improbable
451) reveal
452) extraordinary
453) have
454) imperceptible
455) gradually
456) producing
457) explosive
458) be observed
459) visible
460) are confronted
461) accumulated
462) evades
463) be observed
464) why
465) uses
466) taken
467) highlight
468) gradually
469) The Silence of Imagination in Representing Climate Change
470) imagination, imagination, unlikely, everyday life
471) Walking
472) pounding
473) to visit
474) entering
475) to become
476) amazing
477) calm
478) been lent
479) relieved
