Maia chattered happily about her skis while my thoughts drifted to past ski trips with my husband. I wistfully recalled the pain in my tired legs and my snow-chilled hands the time we pushed on through bad weather in hope of shelter, and then how we crawled, half-frozen and hungry, from our tent after a fitful night to be welcomed by one of the most awesome vistas I'd seen in my life. (그 모험은 고통을 겪을 만한 가치가 있었고, 어쩌면 그것 때문에 훨씬 더 달콤했을지도 모른다). Now that Maia has joined our life, I've missed hiking, kayaking, diving, and ski trips. Painters have in principle an infinite range of colours at their disposal, especially in modern times with the chromatic explosion of ① synthetic chemistry. And yet painters don't use all the colours at once, and indeed many have used a remarkably restrictive selection. Mondrian limited himself mostly to the three primaries red, yellow and blue to fill his black-ruled grids, and Kasimir Malevich worked with similar self-imposed restrictions. For Yves Klein, one colour was enough; Franz Kline's art was typically black on white. There was nothing new in this: the Greeks and Romans tended to use just red, yellow, black and white. Why? (A) Surveys conducted in a wide range of cultures reveal that black is seen as the color of evil and death in virtual all corners of the world. This negative association leads to several interesting results in the domain of professional sports. When we asked a group of respondents to rate the appearance of professional football uniforms, they judged those that were at least half black to be the most “bad,” “mean” and “aggressive” looking. These perceptions influence, in turn, how specific actions performed by black-uniformed teams are viewed. We showed groups of trained referees one of two videotapes of the same aggressive play in a football game, one with the team wearing white and one with it wearing black. The referees who saw the black-uniformed version rated the play as much more favorable than those who saw the white-uniformed version. ## 수능 내신 둘 잡기 04

A month before she turned one, my sister Ann had her first asthma attack. Though it was before the Internet, my mother (1) doggedly tracked down as much research about treatment as she could get her hands on: reading books on asthma, (2) clipping articles, and swapping notes about treatment with other parents. She soon grew (3) skeptical of the doctor who was treating her youngest daughter. The doctor's answers contradicted those of other doctors, and her treatment suggestions departed pretty radically from some of the material my mom was reading. Her growing skepticism peaked after looking up the dosage of steroids the doctor had prescribed for my one-year-old sister, to find that it was (4) insufficient for a three-hundred-pound adult. My mom decided to find another doctor, and though Ann got better, she always (5) retained the same air of skepticism when talking to doctors.
