18.

Dear Ms. Green,

My name is Donna Williams, a science teacher at Rogan High School. I am planning a special workshop for our science teachers. We are interested in learning how to teach online science classes. I have been impressed with your ideas about using internet platforms for science classes. Since you are an expert in online education, I would like to ask you to deliver a special lecture at the workshop scheduled for next month. I am sure the lecture will help our teachers manage *successful* online science classes, and I hope we can learn from your insights. I am looking forward to hearing from you.

저의 이름은 Donna Williams이며, Rogan 고등학교의 과학 교사입니다. 저는 우리 학교의 과학 교사들을 위한 특별 워크숍을 계획하고 있습니다. 저희는 온라인 과학 수업을 가르치는 방법을 배우는 데 관심을 가지고 있습니다. 저는 과학 수업에 인터넷 플랫폼을 사용하는 데 대한 귀하의 아이디어에 감명을 받았습니다. 귀하가 온라인 교육의 전문가이기에, 저는 다음 달에 계획된 워크숍에 귀하가 특별 강연을 해주시기를 부탁드리고자 합니다. 저희 교사들이 성공적인 온라인 과학 수업을 해내는 데 강의가 도움이 되리라고 확신하며 귀하의 통찰력으로부터 저희가 배울 수 있기를 희망합니다. 귀하의 답변을 고대하고 있겠습니다.

19.

It was Evelyn's first time to explore the Badlands of Alberta, famous across Canada for its numerous dinosaur fossils. As a young amateur bone-hunter, she was overflowing with anticipation. She had not travelled this far for the bones of common dinosaur species. Her life-long dream to find rare fossils of dinosaurs was about to come true. She began eagerly searching for them. After many hours of wandering throughout the deserted lands, however, she was unsuccessful. Now, the sun was beginning to set, and her goal was still far beyond her reach. Looking at the slowly darkening ground before her, she sighed to herself, "I can't believe I came all this way for nothing. What a waste of time!"

캐나다 전역에서 그곳의 수많은 공룡 화석으로 유명한 앨버타주의 Badlands를 탐험하는 것이 Evelyn에게는 처음이었다. 젊은 아마추어 (공룡) 뼈 발굴자로서, 그녀는 기대감으로 가득 차 있었다. 그녀는 흔한 공룡 종의 뼈를 위해서 이렇게 멀리까지 이동하지는 않았다. 진기한 공룡 화석을 발견하고자 하는 그녀의 평생에 걸친 꿈이 막 실현되려고 하고 있었다. 그녀는 열심히 그것들을 찾기 시작했다. 하지만 황량한 땅을 여러 시간 헤매고 다닌 후에도 그녀는 성과를 얻지 못했다. 이제 해가 지기 시작하고 있었고, 그녀의 목표는 여전히 멀리 그녀의 손이 닿지 않는 곳에 있었다. 천천히 어두워지는 그녀 앞의 지면을 바라보면서 그녀는 혼자 한숨을 쉬며 말했다. "이렇게 먼 길을 와서 아무것도 얻지 못하다니 믿을 수가 없어. 무슨 시간 낭비란 말인가!"

20.

One of the most common mistakes made by organizations when they first consider experimenting with social media is that they focus too much on social media tools and platforms and not enough on their business objectives. The reality of success in the social web for businesses is that creating a social media program begins not with insight into the latest social media tools and channels but with a thorough understanding of the organization's own goals and objectives. A social media program is not merely the fulfillment of a vague need to manage a "presence" on popular social networks because "everyone else is doing it." "Being in social media" serves no purpose in and of itself. In order to serve any purpose at all, a social media presence must either solve a problem for the organization and its customers or result in an improvement of some sort (preferably a measurable one). In all things, purpose drives success. The world of social media is no different.

조직이 소셜 미디어로 실험하는 것을 처음 고려할 때 범하는 가장 일반적인 실수 중 하나는 너무 지나치게 소셜 미디어 도구와 플랫폼에 중점을 두고 조직 자체의 사업 목표에는 충분히 중점을 두지 않는 것이다. 기업을 위한 소셜 웹에서의 성공의 실제는 소셜 미디어 프로그램을 고안하는 것이 최신 소셜 미디어 도구와 채널에 대한 통찰력이 아니라 조직 자체의 목적과 목표에 대한 철저한 이해와 더불어 시작된다는 것이다. 소셜 미디어 프로그램은 그저 '다른 모든 이가 하고 있기 때문에 인기 소셜 네트워크상에서 '존재'를 관리해야 할 막연한 필요를 이행하는 것이 아니다. '소셜 미디어에 있다는 것'은 그 자체로는 아무 쓸모도 없다. 조금이라도 어떤 쓸모가 있으려면, 소셜 미디어상의 존재는 조직과 조직의 고객을 위해 문제를 해결하거나 어떤 종류의 개선이라는 결과(될 수 있으면 측정 가능한 결과)를 가져와야 한다. 어떤 일이든, 목적이 성공을 이끌어낸다. 소셜 미디어의 세계도 다르지 않다.

21.

Scientists have no special purchase on moral or ethical decisions; a climate scientist is no more qualified to comment on health care reform than a physicist is to judge the causes of bee colony collapse. The very features that create expertise in a specialized domain lead to ignorance in many others. In some cases lay people — farmers, fishermen, patients, native peoples — may have relevant experiences that scientists can learn from. Indeed, in recent years, scientists have begun to recognize this: the Arctic Climate Impact Assessment includes observations gathered from local native groups. So our trust needs to be limited, and focused. It needs to be very particular. Blind trust will get us into at least as much trouble as no trust at all. But without some degree of trust in our designated experts — the men and women who have devoted their lives to sorting out tough questions about the natural world we live in — we are paralyzed, in effect not knowing *whether to make ready for the morning commute or not*.

* lay: 전문가가 아닌 ** paralyze: 마비시키다 *** commute: 통근

과학자들은 도덕적 혹은 윤리적 결정에 대한 특별한 강점이 없으며, 기후 과학자가 의료 개혁에 대해 견해를 밝힐 자격이 없는 것은 물리학자가 꿀벌 집단의 붕괴 원인을 판단할 자격이 없는 것과 같다. 전문화된 영역에서의 전문 지식을 만들어내는 바로 그 특징이 많은 다른 영역에서의 무지로 이어진다. 어떤 경우에는, 전문가가 아닌 사람들, 즉 농부, 어부, 환자, 토착민이, 과학자들이 그것으로부터 배울 수 있는 관련 경험을 가지고 있을 수 있다. 실제로, 최근 들어 과학자들은 이 점을 인식하기 시작 했는데, 북극 기후 영향 평가는 지역 토착 집단에게서 수집된 관찰을 포함한다. 그러므로 우리의 신뢰는 한정되고 초점이 맞춰질 필요가 있다. 그것은 매우 특정할 필요가 있다. 맹목적 신뢰는 최소한 신뢰가 전혀 없는 것만큼이나 우리를 문제에 봉착하게 할 것이다. 하지만 우리의 지정된 전문가들, 즉 평생을 우리가 사는 자연 세계에 관한 어려운 질문들을 처리하는 데 생애를 바친 남녀들에 대한 어느 정도의 신뢰가 없으면, 우리는 마비되고, 사실상 아침 통근을 위해 준비해야 할지 말아야 할지를 알지 못할 것이다.

22.

Environmental hazards include biological, physical, and chemical ones, along with the human behaviors that promote or allow exposure. Some environmental contaminants are difficult to avoid (the breathing of polluted air, the drinking of chemically contaminated public drinking water, noise in open public spaces); in these circumstances, exposure is largely involuntary. Reduction or elimination of these factors may require societal action, such as public awareness and public health measures. In many countries, the fact that some environmental hazards are difficult to avoid at the individual level is felt to be more morally egregious than those hazards that can be avoided. *Having no choice but to* drink water contaminated with very high levels of arsenic, or being forced to passively *breathe* in tobacco smoke in restaurants, outrages people more than the personal choice of whether an individual smokes tobacco. These factors are important when one considers how change (risk reduction) happens.

* contaminate: 오염시키다 ** egregious: 매우 나쁜

환경 위험 요인에는 생물학적, 물리적, 화학적 위험 요인과 함께 노출을 조장하거나 허용하는 인간의 행동이 포함된다. (오염된 공기의 호흡, 화학적으로 오염된 공공 식수의 음용, 개방된 공공장소에서의 소음처럼) 일부 환경 오염 물질은 피하기가 어렵고, 이러한 상황에서 노출은 대개 자기도 모르게 이루어진다. 이러한 요인의 감소 또는 제거에는 대중의 인식 및 공중 보건 조치와 같은 사회적 조치가 필요할 수도 있다. 많은 국가에서, 일부 환경적 위험 요인이 개인 수준에서 피하기 어렵다는 사실은 피할 수 있는 그 위험 요인보다 도덕적으로 더 매우 나쁜 것으로 느껴진다. 어쩔 수 없이 매우 높은 수준의 비소로 오염된 물을 마실 수밖에 없는 것이나, 식당에서 담배 연기를 수동적으로 들이마시도록 강요당하는 것은 개인이 담배를 피울지 말지에 대한 개인적인 선택보다 더 사람들을 화나게 한다. 이러한 요인들은 변화(위험 감소)가 어떻게 일어나는지를 고려할 때 중요하다.

숙어 정리 –~ 할 수 밖에 없다. (하지 않을 수 없다)

cannot help(stop) ~ing cannot help but 원형 cannot do anything but 원형 have no choice but to 원형

bath ⓝ 목욕 / bathe ⓥ 목욕 시키다. breath ⓝ 숨, 숨쉬기 / breathe ⓥ 숨 쉬다. 호흡하다.

23.

Scientists use paradigms rather than believing them. The use of a paradigm in research typically addresses related problems by employing shared concepts, symbolic expressions, experimental and mathematical tools and procedures, and even some of the same theoretical statements. Scientists need only understand how to use these various elements in ways that others would accept. These elements of shared practice thus need not presuppose any comparable unity in scientists' beliefs about what they are doing when they use them. Indeed, one role of a paradigm is to enable scientists to work successfully without having to provide a detailed account of what they are doing or what they believe about it. Thomas Kuhn noted that scientists "can agree in their identification of a paradigm without agreeing on, or even attempting to produce, a full interpretation or rationalization of it. Lack of a standard interpretation or of an agreed reduction to rules will not *prevent* a paradigm *from* guiding research."

과학자들은 패러다임을 믿기보다는 그것을 사용한다. 연구에서 패러다임의 사용은 일반적으로 공유된 개념, 상징적 표현, 실험 및 수학적 도구와 절차, 그리고 심지어 동일한 이론적 진술의 일부를 사용함으로써 관련된 문제들을 다룬다. 과학자들은 다른 사람들이 받아들일 방식으로 이러한 다양한 요소들을 사용하는 '방법'을 이해하기만 하면 된다. 따라서 이러한 공유된 실행의 요소들은 과학자들이 그것들을 사용할 때 그들이 하고 있는 것에 관한 그들의 믿음에서 그 어떤 비슷한 통일성을 전제로 할 필요는 없다. 실제로, 패러다임의 한 가지 역할은 과학자들이 그들이 무엇을 하고 있는지 또는 그들이 그것에 관해 무엇을 믿고 있는지에 대한 상세한 설명을 제공할 필요 없이 성공적으로 일할 수 있게 하는 것이다. Thomas Kuhn이 언급하기를, 과학자들은 "패러다임에 대한 완전한 '해석'이나 '이론적 설명'에 동의하거나, 심지어 그런 것을 만들어 내려고 시도조차 하지 않고도, 그것(패러다임)을 '식별'하는 데 있어서 일치를 보일 수 있다. 표준적인 해석이나 규칙으로 축약되어 합의된 것이 없다 해도 패러다임이 연구를 안내하는 것을 막지는 못할 것이다."

숙어 정리 – A가 B를 못하게 하다; 직역 - A를 막다, B로 부터

keep (ban/ deter / disable/ discourage/ dissuade/ hinder/ inhibit/ prohibit/ prevent/ spare/ stop) A from B *주의: forbid A to 원형

24.

Mending and restoring objects often require even more creativity than original production. The preindustrial blacksmith made things to order for people in his immediate community; customizing the product, modifying or transforming it according to the user, was routine. Customers would bring things back if something went wrong; repair was thus an extension of fabrication. With industrialization and eventually with mass production, making things became the province of machine tenders with limited knowledge. But repair continued to require a larger grasp of design and materials, an understanding of the whole and a comprehension of the designer's intentions. "Manufacturers all work by machinery or by vast subdivision of labour and not, so to speak, by hand," an 1896 Manual of Mending and Repairing explained. "But all repairing must be done by hand. We can make every detail of a watch or of a gun by machinery, but the machine cannot mend it when broken, much less a clock or a pistol!"

물건을 고치고 복원하는 것에는 흔히 최초 제작보다 훨씬 더 많은 창의력이 필요하다. 산업화 이전의 대장장이는 가까이에 사는 마을 사람들을 위해 주문에 따라 물건을 만들었고, 제품을 주문 제작하는 것, 즉 사용자에게 맞게 그것을 수정하거나 변형하는 일이 일상적이었다. 고객들은 뭔가 잘못되면 물건을 다시 가져다주곤 했고, 따라서 수리는 제작의 연장이었다. 산업화와 결국 대량 생산이 이루어지면서, 물건을 만드는 것은 제한된 지식을 지닌 기계 관리자의 영역이 되었다. 그러나 수리에는 설계와 재료에 대한 더 큰 이해, 즉 전체에 대한 이해와 설계자의 의도에 대한 이해가 계속 요구되었다. 1896년의 Manual of Mending and Repairing의 설명에 따르면, "제조업자들은 모두 기계나 방대한 분업으로 일하고, 말하자면 수작업으로 일하지는 않는다." "그러나 모든 수리는 손으로 '해야 한다'. 우리는 기계로 손목시계나 총의 모든 세부적인 것을 만들 수 있지만, 고장 났을 때 기계는 그것을 고칠 수 없으며, 시계나 권총은 말할 것도 없다!"

26.

Donato Bramante, born in Fermignano, Italy, began to paint early in his life. His father encouraged him to study painting. Later, he worked as an assistant of Piero della Francesca in Urbino. Around 1480, he built several churches in a new style in Milan. He had a close relationship with Leonardo da Vinci, and they worked together in that city. Architecture became his main interest, but he did not give up painting. Bramante moved to Rome in 1499 and participated in Pope Julius II's plan for the renewal of Rome. He planned the new Basilica of St. Peter in Rome — one of the most ambitious building projects in the history of humankind. Bramante died on April 11, 1514 and was buried in Rome. His buildings influenced other architects for centuries.

이탈리아의 Fermignano에서 태어난 Donato Bramante는 인생에서 일찍이 그림을 그리기 시작했다. 그의 아버지는 그에게 그림을 공부하도록 격려했다. 나중에, 그는 Urbino에서 Piero della Francesca의 조수로 일했다. 1480년경, 그는 Milan에 몇 개의 교회들을 새로운 양식으로 건축했다. 그는 Leonardo da Vinci와 친근한 관계를 맺었으며, 그들은 그 도시에서 함께 작업했다. 건축이 그의 주요한 관심사가 되었지만, 그는 그림을 포기하지 않았다. Bramante는 1499년에 Rome으로 이주해서 교황 Julius 2세의 Rome 재개발 계획에 참여했다. 그는 Rome의 성 베드로 대성당의 새로운 바실리카를 구상했는데, 그것은 인류 역사상 가장 야심 찬 건축 프로젝트 중 하나였다. Bramante는 1514년 4월 11일에 사망했으며 Rome에 묻혔다. 그의 건축물들은 여러 세기 동안 다른 건축가들에게 영향을 끼쳤다.

27~28. 안내문

29.

Like whole individuals, cells have a life span. During their life cycle (cell cycle), cell size, shape, and metabolic activities can change dramatically. A cell is “born” as a twin when its mother cell divides, producing two daughter cells. Each daughter cell is smaller than the mother cell, and except for unusual cases, each grows until it becomes as large as the mother cell was. During this time, the cell absorbs water, sugars, amino acids, and other nutrients and assembles them into new, living protoplasm. After the cell has grown to the proper size, its metabolism shifts as it either prepares to divide or matures and differentiates into a specialized cell. Both growth and development require a complex and dynamic set of interactions involving all cell parts. *That* cell metabolism and structure should be complex would not be surprising, but actually, they are rather simple and logical. Even the most complex cell has only a small number of parts, each responsible for a distinct, well-defined aspect of cell life.

* metabolic: 물질대사의 ** protoplasm: 원형질

개체 전체와 마찬가지로, 세포도 수명을 가지고 있다. 그것의 생명 주기(세포 주기) 동안에, 세포의 크기, 모양, 물질대사 활동이 극적으로 변할 수 있다. 세포는 모세포가 분열할 때 쌍둥이로 '탄생' 하여, 두 개의 딸세포를 생성한다. 각각의 딸세포는 모세포보다 더 작으며, 특이한 경우를 제외하고는 각각 모세포의 크기만큼 커질 때까지 자란다. 이 기간 동안, 세포는 물, 당, 아미노산, 그리고 다른 영양소들을 흡수하고 그것들을 새로운 살아있는 원형질로 조합한다. 세포가 적절한 크기로 성장한 후, 그것은 분열할 준비를 하거나 혹은 성숙하여 특화된 세포로 분화하면서 그것의 물질대사가 변화한다. 성장과 발달 둘 다 모든 세포 부분을 포함하는 일련의 복잡하고 역동적인 상호 작용을 필요로 한다. 세포의 물질대사와 구조가 복잡할 것임은 놀라운 것이 아니겠지만, 실제로 그것들은 꽤 간단하고 논리적이다. 가장 복잡한 세포조차도 그저 몇몇 부분만을 가지고 있는데, 각각은 세포 생명의 뚜렷하고, 명확한 측면을 맡고 있다.

30.

It ***has been suggested*** that "organic" methods, defined as those in which only natural products can be used as inputs, would be less damaging to the biosphere. Large-scale adoption of "organic" farming methods, however, would reduce yields and increase production costs for many major crops. Inorganic nitrogen supplies are essential for maintaining moderate to high levels of productivity for many of the non-leguminous crop species, because organic supplies of nitrogenous materials often are either limited or more expensive than inorganic nitrogen fertilizers. In addition, there are *constraints* to the extensive use of either manure or legumes as "green manure" crops. In many cases, weed control can be very difficult or require much hand labor if chemicals cannot be used, and fewer people are willing to do this work as societies become wealthier. Some methods used in "organic" farming, however, such as the *sensible* use of crop rotations and specific combinations of cropping and livestock enterprises, can make important contributions to the sustainability of rural ecosystems.

* nitrogen fertilizer: 질소 비료 ** manure: 거름 *** legume: 콩과(科) 식물

천연 제품들만 투입물로 사용되는 방식으로 정의되는 '유기농' 방식은 생물권에 해를 덜 끼친다고 시사되어 왔다. 그러나 '유기농 경작 방식의 대규모 채택은 많은 주요 작물의 산출량을 감소시키고 생산비를 증가시키게 된다. 무기질 질소 공급은 많은 비(非)콩과 작물 종의 생산성을 중상 수준으로 유지하는 데 필수적인데, 그것은 질소성 물질의 유기적 공급이 무기 질소 비료보다 자주 제한적이거나 더 비싸기 때문이다. 게다가, '친환경적인 거름작물로 거름이나 콩과 식물의 광범위한 사용에는 제약이 있다. 많은 경우, 화학 물질이 사용될 수 없으면 잡초 방제가 매우 어렵거나 많은 손일이 필요할 수 있는데, 사회가 부유해짐에 따라 이 작업을 기꺼이 하려는 사람이 더 적을 것이다. 그러나 돌려짓기의 합리적인 사용과 경작과 가축 경영의 특정한 조합과 같은 '유기농 경작에서 사용되는 몇몇 방식들은 농촌 생태계의 지속 가능성에 중요한 이바지를 할 수 있다.

운동 어휘

sensitive: 민감한, 섬세한 / sensible: 실용적인, 분별 있는, 현명한 / sensational: 선풍적 인기의 / sensual: 관능적인, 육감적인 / sensory: 감각(기관)의

31.

Humour involves not just practical disengagement but cognitive disengagement. As long as something is funny, we are for the moment not concerned with whether it is real or fictional, true or false. *This is why* we give *considerable* leeway to people telling funny stories. If they are getting extra laughs by exaggerating the silliness of a situation or even by making up a few details, we are happy to grant them comic licence, a kind of poetic licence. Indeed, someone listening to a funny story who tries to correct the teller — 'No, he didn't spill the spaghetti on the keyboard and the monitor, just on the keyboard' — will probably be told by the other listeners to stop interrupting. The creator of humour is putting ideas into people's heads for the pleasure those ideas will bring, not to provide *accurate* information.

* cognitive: 인식의 ** leeway: 여지

유머는 실제적인 이탈뿐만 아니라 인식의 이탈을 포함한다. 어떤 것이 재미있다면, 우리는 잠깐 그것이 진짜인지 허구인지, 진실인지 거짓인지에 관해 관심을 두지 않는다. 이것이 우리가 재미있는 이야기를 하는 사람들에게 상당한 여지를 주는 이유이다. 만약 그들이 상황의 어리석음을 과장하거나 심지어 몇 가지 세부 사항을 꾸며서라도 추가 웃음을 얻고 있다면, 우리는 그들에게 기꺼이 희극적 파격, 일종의 시적 파격을 허락한다. 실제로, 재미있는 이야기를 듣고 있는 누군가가 '아니야, 그는 스파게티를 키보드와 모니터에 쏟은 것이 아니라 키보드에만 쏟았어.'라며 말하는 사람을 바로잡으려고 하면 그는 아마 듣고 있는 다른 사람들에게서 방해하지 말라는 말을 들을 것이다. 유머를 만드는 사람은 사람들의 머릿속에 생각을 집어넣고 있는데, 그 생각이 가져올 재미를 위해서이지 정확한 정보를 제공하기 위해서가 아니다.

숙어 정리 - 원인과 결과 구분 - 전치사나 접속사나 뒷 부분과 묶어 해석 하면 쉽다.

result from ~로부터 생기다 [원인] result in ~가 되다 [결과] The accident resulted (from the driver.)
That is because ~ 때문이다 [원인] That is why ~한 이유이다 [결과] That is [why the driver is in hospital.]

운동 어휘

consider ⓥ 고려하다 - considerate ⓐ 사려 깊은 / considerable ⓐ 상당한

32.

News, especially in its televised form, is constituted not only by its choice of topics and stories but by its *verbal and visual idioms or modes of address*. Presentational styles have been subject to a tension between an informational-educational purpose and the need to engage us entertainingly. While current affairs programmes are often ‘serious’ in tone sticking to the ‘rules’ of balance, more popular programmes adopt a friendly, lighter, idiom in which we are invited to consider the impact of particular news items from the perspective of the ‘average person in the street’. Indeed, contemporary news construction has come to rely on an increased use of faster editing tempos and ‘flashier’ presentational styles including the use of logos, sound-bites, rapid visual cuts and the ‘star quality’ of news readers. Popular formats can be said to enhance understanding by engaging an audience unwilling to endure the longer verbal orientation of older news formats. However, they arguably work to reduce understanding by failing to provide the structural contexts for news events.

뉴스, 특히 텔레비전으로 방송되는 형태는 그것이 선택하는 주제와 이야기뿐만 아니라 그것의 언어적, 시각적 표현 양식이나 전달 방식에 의해서도 구성된다. 표현 방식은 정보 제공 및 교육적 목적과 재미있게 우리의 주의를 끌 필요성 사이의 긴장 상태에 영향을 받아 왔다. 시사 프로그램들이 흔히 균형이라는 '규칙'을 고수하면서 어조가 '진지하지만, 더 대중적인 프로그램들은 친근하고 더 가벼운 표현 양식을 채택하는데 그 표현 양식에서 우리는 '거리에서 만나는 보통 사람'의 관점에서 특정 뉴스 기사의 영향을 고려해보게 된다. 사실, 현대의 뉴스 구성은 로고, 짤막한 방송용 어구, 빠른 시각적 편집 화면, 그리고 뉴스 독자의 '스타성'을 이용하는 것을 포함한 더 빠른 편집 속도와 '더 현란한 표현 방식을 더 많이 이용하는 것에 의존하게 되었다. 대중적인 구성은 장황한 언어를 지향하는 낡은 뉴스 구성 방식을 견딜 의사가 없는 시청자의 주의를 끌어서 이해를 높였다고 할 수 있다. 하지만 그것은 뉴스 사건에 관한 구조적 맥락을 제공하지 못함으로써 아마 틀림없이 이해를 감소시키는 효과가 있다.

33.

Elinor Ostrom found that there are several factors critical to bringing about stable institutional solutions to the problem of the commons. She pointed out, for instance, that the actors affected by the rules for the use and care of resources must have the right to *participate in decisions to change the rules*. For that reason, the people who monitor and control the behavior of users should also be users and/or have been given a mandate by all users. This is a significant insight, as it shows that prospects are poor for a centrally directed solution to the problem of the commons coming from a state power in comparison with a local solution for which users assume personal responsibility. Ostrom also emphasizes the importance of democratic decision processes and that all users must be given *access* to local forums for solving problems and conflicts among themselves. Political institutions at central, regional, and local levels must allow users to devise their own regulations and independently ensure *observance*.

* commons: 공유지 ** mandate: 위임

Elinor Ostrom은 공유지의 문제에 대한 안정적인 제도적 해결책을 가져오는 데 중요한 몇 가지 요인이 있음을 알게 되었다. 예를 들어, 그녀는 자원의 이용 및 관리 규칙의 영향을 받는 행위자에게 규칙을 변경하는 결정에 참여할 권리가 있어야 한다고 지적했다. 그러한 이유로 이용자의 행동을 감시하고 통제하는 사람 또한 이용자이고, 이용자이거나 모든 이용자에 의한 위임을 받았어야 한다. 이것은 중요한 통찰인데, 이용자가 개인적 책임을 지는 지역적인 해결책에 비해 국가 권력에서 나오는 공유지 문제에 대한 중앙 (정부) 지향적 해결책의 전망이 열악하다는 것을 그것이 보여주기 때 문이다. Ostrom은 또한 민주적 의사결정 과정의 중요성과 모든 이용자에게 그들 사이의 문제와 갈등을 해결하기 위한 지역 포럼에 참여할 권한이 주어져야 한다고 강조한다. 중앙, 지방 및 지역 차원의 정치 기관들은 이용자가 자체 규정을 고안하고 독립적으로 준수할 수 있도록 해야 한다.

34.

Precision and determinacy are a necessary requirement for all meaningful scientific debate, and progress in the sciences is, to a large extent, the ongoing process of achieving ever greater precision. But historical representation puts a premium on a proliferation of representations, hence not on the refinement of one representation but on the production of an ever more varied set of representations. Historical insight is not a matter of a continuous "narrowing down" of previous options, not of an approximation of the truth, but, on the contrary, is an "explosion" of possible points of view. It therefore aims at the unmasking of previous illusions of determinacy and precision by the production of new and alternative representations, rather than at achieving truth by a careful analysis of what was right and wrong in those previous representations. And from this perspective, the development of historical insight may indeed be regarded by the outsider as a process of creating ever more confusion, a continuous questioning of *certainty and precision seemingly achieved already*, rather than, as in the sciences, an ever greater approximation to the truth.

* proliferation: 증식

정확성과 확정성은 모든 의미 있는 과학 토론을 위한 필요조건이며, 과학에서의 발전은 상당 부분, 훨씬 더 높은 정확성을 달성하는 계속 진행 중인 과정이다. 그러나 역사적 진술은 진술의 증식을 중요시하는데, 이는 한 가지 진술의 정제가 아닌, 훨씬 더 다양한 진술 집합의 생성에 중요성을 두는 것이다. 역사적 통찰은 이전에 선택한 것들을 지속해서 '좁혀 가는 것의 문제, 즉 진리에 근접함의 문제가 아니라, 반대로 가능한 관점들의 '폭발적 증가'이다. 그러므로 그것은 이전의 진술에서 무엇이 옳고 틀렸는지에 대한 신중한 분석에 의해 진리를 획득하는 것이 아니라, 새롭고 대안적인 진술의 생성에 의해 확정성과 정확성에 대해 이전에 가진 환상의 정체를 드러내는 것을 목표로 한다. 그리고 이러한 관점에서 보면, 역사적 통찰의 발전은 과학에서처럼 진리에 훨씬 더 많이 근접함보다 는, 훨씬 더 큰 혼란을 만들어 내는 과정, 즉 이미 획득한 것처럼 보이는 확실성과 정확성에 대한 지속적인 의문 제기로 외부인에게 진정 여겨질 수도 있다.

35.

Since their introduction, information systems have substantially changed the way business is conducted. This is particularly true for business in the shape and form of cooperation between firms that involves an integration of value chains across multiple units. The resulting networks do not only cover the business units of a single firm but typically also include multiple units from different firms. As a consequence, firms do not only need to consider their internal organization in order to ensure sustainable business performance; they also need to take into account the entire ecosystem of units surrounding them. In order to allow these different units to cooperate successfully, the existence of a common platform is crucial.

정보 시스템은 도입 이래로 사업 수행 방식을 상당히 변화시켜왔다. 이는 특히 다수의 부문에 걸쳐 가치 체인의 통합을 수반하는 기업 간의 협력 형태와 유형의 사업에 특히 해당된다. 그 결과로 나타내는 네트워크는 단일 기업의 사업 부문을 포함할 뿐만 아니라, 서로 다른 기업의 여러 부문을 포함하기도 한다. 결과적으로, 기업은 지속 가능한 사업성과를 보장하기 위해 그들 내부 조직에 주의를 기울일 필요가 있을 뿐만 아니라, 자신들을 둘러싸고 있는 부문들의 전체 생태계를 고려할 필요도 있다. 이 서로 다른 부문들이 성공적으로 협력할 수 있도록 하기 위해서는 공동 플랫폼의 존재가 매우 중요하다.

36.

According to the market response model, it is increasing prices that drive providers to search for new sources, innovators to substitute, consumers to conserve, and alternatives to emerge. Taxing certain goods or services, and so increasing prices, should *result in* either decreased use of these resources or creative innovation of new sources or options. The money ***raised*** through the tax can be used directly by the government either to supply services or to search for alternatives. Many examples of such "green taxes" exist. Facing landfill costs, labor expenses, and related costs in the provision of garbage disposal, for example, some cities have required households to dispose of all waste in special trash bags, purchased by consumers themselves, and often costing a dollar or more each. The results have been greatly increased recycling and more careful attention by consumers to packaging and waste. By internalizing the costs of trash to consumers, there has been an observed decrease in the flow of garbage from households.

시장 반응 모형에 따르면, 공급자가 새로운 공급원을 찾게 하고, 혁신가가 대용하게 하고, 소비자가 아껴 쓰게 하고, 대안이 생기게 하는 것은 바로 가격의 인상이다. 특정 재화나 서비스에 과세하여 가격이 인상되면 이러한 자원의 사용이 줄거나 새로운 공급원 또는 선택사항의 창조적 혁신을 낳을 것이다. 세금을 통해 조성된 돈은 정부가 직접 서비스를 공급하거나 대안을 모색하는 데 사용할 수 있다. 그러한 '환경세'의 많은 예가 존재한다. 예를 들어, 쓰레기 매립비용, 인건비, 쓰레기 처리를 준비하는 데 관련된 비용에 직면한 일부 도시는 가정이 모든 폐기물을 소비자가 직접 구입한, 각각 흔히 1달러 또는 그 이상씩 드는 특별 쓰레기봉투에 담아 처리하도록 요구해왔다. 그 결과 재활용이 크게 증가했고 소비자가 포장과 폐기물에 더 세심한 주의를 기울이게 되었다. 소비자에게 쓰레기 비용을 자기 것으로 만들게 함으로써, 가정에서 나오는 쓰레기 흐름의 감소가 관찰되었다.

숙어 정리 – 원인과 결과 구분 – 전치사나 접속사나 뒷 부분과 묶어 해석 하면 쉽다.

result from ~로부터 생기다 [원인] result in ~가 되다 [결과] The accident resulted (from the driver.)
That is because ~ 때문이다 [원인] That is why ~한 이유이다 [결과] That is [why the driver is in hospital.]

어법 정리 – 자/타동사

rise - rose - risen - rising :자/ 일어나다 raise - raised - raised - raising :타/ 일으키다

37.

In spite of the likeness between the fictional and real world, the fictional world deviates from the real one in one important respect. The existing world faced by the individual is in principle an infinite chaos of events and details before it is organized by a human mind. This chaos only gets processed and modified when perceived by a human mind. Because of the inner qualities with which the individual is endowed through heritage and environment, the mind functions as a filter; every outside impression that passes through it is filtered and interpreted. However, the world the reader encounters in literature is already processed and filtered by another consciousness. The author has selected the content according to his own worldview and his own conception of relevance, in an attempt to be neutral and objective or convey a subjective view on the world. Whatever the motives, the author's subjective conception of the world stands between the reader and the original, untouched world on which the story is based.

* deviate: 벗어나다 ** endow: 부여하다 *** heritage: 유산

허구의 세계와 현실의 세계 사이의 유사성에도 불구하고 허구의 세계는 하나의 중요한 측면에서 현실 세계로부터 벗어난다. 개인이 직면한 기존(현실) 세계는 이론상으로는 인간의 정신에 의해 조직되기 전에는 사건들과 세부 사항들의 무한한 혼돈 상태이다. 이 혼돈 상태는 인간의 정신에 의해 인식될 때만이 처리되고 수정된다. 개인이 유산과 환경을 통해 부여받은 내적 특성 때문에 그러한 정신은 그것을 통과하는 모든 외부의 인상이 걸러지고 해석되는 여과기 역할을 한다. 그러나 문학에서 독자가 접하는 세계는 이미 또 다른 의식에 의해 처리되고 여과되어 있다. 작가는 중립적이고 객관적이려는, 또는 세계에 대한 주관적인 견해를 전달하려는 시도에서 자신의 세계관과 적절성에 대한 자신의 개념에 따라 내용을 선정했다. 동기가 무엇이든, 세계에 대한 작가의 주관적인 개념은 독자와 이야기의 기반이 되는 원래의 손대지 않은 세계 사이에 존재한다.

38.

Introduction of robots into factories, while employment of human workers is being reduced, creates worry and fear. It is the responsibility of management to prevent or, at least, to ease these fears. For example, robots could be introduced only in new plants rather than replacing humans in existing assembly lines. Workers should be included in the planning for new factories or the introduction of robots into existing plants, so they can participate in the process. It may be that robots are needed to reduce manufacturing costs so that the company remains competitive, but planning for such cost reductionsshould be done jointly by labor and management. *Retraining current employees for new positions within the company will also greatly reduce their fear of being laid off.* Since robots are particularly good at highly repetitive simple motions, the replaced human workers should be moved to positions where judgment and decisions beyond the abilities of robots are required.

공장에 로봇을 도입하는 것은, 인간 노동자의 고용이 줄어들면서 걱정과 두려움을 불러일으킨다. 이러한 두려움을 예방하거나 최소한 완화하는 것은 경영진의 책임이다. 예를 들어, 로봇은 기존 조립 라인에서 인간을 대체하는 대신 새로운 공장에만 도입될 수 있다. 노동자는 새로운 공장을 계획하거나 기존의 공장에 로봇을 도입하는 데 포함되어야 하는데, 그렇게 함으로써 그들은 그 과정에 참여할 수 있다. 회사가 경쟁력을 유지하도록 제조원가를 낮추기 위해 로봇이 필요할 수도 있지만, 그러한 원가절감을 위한 계획은 노사가 함께해야 한다. 회사 내 새로운 직책을 위해 현재 직원을 재교육하면 해고에 대한 두려움도 또한 크게 줄어들 것이다. 로봇은 특히 매우 반복적인 단순 동작을 잘하기 때문에 교체된 인간 노동자는 로봇의 능력을 넘어선 판단과 결정이 필요한 위치로 옮겨져야 한다.

39.

Cinema is valuable not for its ability to make visible the hidden outlines of our reality, but for its ability to reveal what reality itself veils — the dimension of fantasy. This is why, to a person, the first great theorists of film decried the introduction of sound and other technical innovations (such as color) that pushed film in the direction of realism. Since cinema was an entirely fantasmatic art, these innovations were completely unnecessary. And what's worse, they could do nothing but turn filmmakers and audiences away from the fantasmatic dimension of cinema, potentially transforming film into a mere delivery device for representations of reality. *As long as the irrealism of the silent black and white film predominated, one could not take filmic fantasies for representations of reality.* But sound and color threatened to create just such an illusion, thereby destroying the very essence of film art. As Rudolf Arnheim puts it, "The creative power of the artist can only come into play where reality and the medium of representation do not coincide."

* decry: 공공연히 비난하다 ** fantasmatic: 환상의

영화는 우리 현실의 숨겨진 윤곽을 보이게 만드는 능력 때문이 아니라 현실 자체가 가리고 있는 것, 즉 환상의 차원을 드러내는 능력 때문에 가치가 있다. 이것이 최초의 위대한 영화 이론가들이 영화를 사실주의 쪽으로 밀어붙였던 소리와 (색채와 같은) 다른 기술 혁신의 도입을 이구동성으로 비난한 이유이다. 영화는 전적으로 환상적인 예술이었기 때문에 이러한 혁신은 완전히 불필요했다. 그리고 설상가상으로 그것들은 잠재적으로 영화를 현실의 묘사를 위한 단순한 전달 장치로 변형시키면서, 영화 제작자와 관객을 영화의 환상적인 차원에서 멀어지게 할 수 있을 뿐이었다. 무성 흑백 영화의 비현실주의가 지배하는 동안은 영화적 환상을 현실에 대한 묘사로 착각할 수 없었다. 그러나 소리와 색채는 바로 그러한 착각을 만들겠다고 위협하여 영화 예술의 바로 그 본질을 파괴했다. Rudolf Arnheim이 표현한 것처럼 "예술가의 창의적 힘은 현실과 묘사의 매체가 일치하지 않는 곳에서만 발휘될 수 있다."

40.

Philip Kitcher and Wesley Salmon have suggested that there are two possible alternatives among philosophical theories of explanation. One is the view that scientific explanation consists in the unification of broad bodies of phenomena under a minimal number of generalizations. According to this view, the (or perhaps, a) goal of science is to construct an economical framework of laws or generalizations that are capable of subsuming all observable phenomena. Scientific explanations organize and systematize our knowledge of the empirical world; the more economical the systematization, the deeper our understanding of what is explained. The other view is the causal/mechanical approach. According to it, a scientific explanation of a phenomenon consists of uncovering the mechanisms that produced the phenomenon of interest. This view sees the explanation of individual events as primary, with the explanation of generalizations flowing from them. That is, the explanation of scientific generalizations comes from the causal mechanisms that produce the regularities.

* subsume: 포섭(포함)하다 ** empirical: 경험적인

Philip Kitcher와 Wesley Salmon은 설명에 대한 철학적 이론 중 두 가지 가능한 대안이 있다고 제안했다. 하나는 과학적 설명이 최소한으로 적은 수의 일반화 아래에 광범위하게 많은 현상들을 '통합'하는 데 있다는 견해이다. 이 견해에 따르면 과학의 목표(혹은 어쩌면 한 가지 목표)는 모든 관찰할 수 있는 현상을 포섭할 수 있는 법칙이나 일반화의 경제적인 틀을 구성하는 것이다. 과학적 설명은 경험적 세계에 대한 우리의 지식을 조직하고 체계화하는데, 체계화가 더 경제적일수록, 설명되는 것에 대한 우리의 이해는 더 깊어진다. 다른 관점은 인과 관계적/기계론적 접근이다. 그것에 따르면, 어떤 현상에 대한 과학적인 설명은 관심 있는 그 현상을 만들어 낸 메커니즘을 밝혀내는 것으로 이루어져 있다. 이 관점은 개별 사건들에 대한 설명을 일차적으로 보고, 일반화에 대한 설명이 그것들로부터 흘러나온다고 본다. 즉, 과학적 일반화에 대한 설명은 규칙성을 만들어 내는 인과적 메커니즘에서 비롯된다.

[41 ~ 42]

Classifying things together into groups is something we do all the time, and it isn't hard to see why. Imagine trying to shop in a supermarket where the food was arranged in random order on the shelves: tomato soup next to the white bread in one aisle, chicken soup in the back next to the 60-watt light bulbs, one brand of cream cheese in front and another in aisle 8 near the cookies. The task of finding what you want would be time-consuming and extremely difficult, if not impossible.

In the case of a supermarket, someone had to design the system of classification. But there is also a ready-made system of classification embodied in our language. The word "dog," for example, groups together a certain class of animals and distinguishes them from other animals. Such a grouping may seem too *obvious* to be called a classification, but this is only because you have already mastered the word. As a child learning to speak, you had to work hard to learn the system of classification your parents were trying to teach you. Before you got the hang of it, you probably made mistakes, like calling the cat a dog. If you hadn't learned to speak, the whole world would seem like the unorganized supermarket; you would be in the position of an infant, for whom every object is new and unfamiliar. In learning the principles of classification, therefore, we'll be learning about the structure that lies at the core of our language.

사물들을 묶어서 그룹으로 분류하는 것은 우리가 항상 하는 일이며, 그 이유를 이해하는 것은 어렵지 않다. 음식이 진열대에 마구잡이로 배열된 슈퍼마켓에서 쇼핑하려고 한다고 상상해 보라. 한 통로에서는 흰빵 옆에 토마토 수프가 있고, 치킨 수프는 뒤쪽에 있는 60와트 백열전구 옆에 있고, 한 크림치즈 브랜드는 앞쪽에, 또 다른 하나는 쿠키 근처의 8번 통로에 있다. 여러분이 원하는 것을 찾는 일은, 불가능하지는 않더라도, 시간이 많이 걸리고 매우 어려울 것이다.

슈퍼마켓의 경우, 누군가는 분류 체계를 설계해야 했다. 하지만 또한 우리 언어에 포함되어 있는 기성의 분류 체계도 있다. 예를 들어, '개'라는 단어는 특정 부류의 동물들을 함께 분류하여 다른 동물들과 구별한다. 분류라고 하기에는 그러한 분류가 너무 분명해 보일 수 있지만, 이것은 단지 여러분이 이미 그 단어를 숙달했기 때문이다. 말하기를 배우는 아이로서, 여러분은 부모님이 가르쳐주려 애썼던 분류 체계를 익히기 위해 열심히 노력해야 했다. 여러분이 그것을 이해하기 전에, 아마 고양이를 개라고 부르는 것과 같은 실수를 했을 것이다. 만약 여러분이 말하기를 배우지 않았다면, 온 세상이 정돈되지 않은 슈퍼마켓처럼 보일 것이다. 여러분은 모든 물건이 새롭고 낯선 유아의 처지에 있을 것이다. 그러므로, 분류의 원리를 배울 때, 우리는 언어의 핵심에 있는 구조에 대해 배우고 있는 것이다.

[43 ~ 45]

In the gym, members of the taekwondo club were busy practicing. Some were trying to kick as high as they could, and some were striking the sparring pad. Anna, the head of the club, was teaching the new members basic moves. Close by, her friend Jane was assisting Anna. Jane noticed that Anna was glancing at the entrance door of the gym. She seemed to be expecting someone. At last, when Anna took a break, Jane came over to her and asked, “Hey, are you waiting for Cora?”

Anna answered the question by nodding uneasily. In fact, Jane knew what her friend was thinking. Cora was a new member, whom Anna had personally invited to join the club. Anna really liked her. Although her budget was tight, Anna bought Cora a taekwondo uniform. When she received it, Cora thanked her and promised, “I’ll come to practice and work hard every day.” However, unexpectedly, she came to practice only once and then never showed up again.

Since Cora had missed several practices, Anna wondered what could have happened. Jane, on the other hand, was disappointed and said judgingly, “Still waiting for her, huh? I can’t believe you don’t feel disappointed or angry. Why don’t you forget about her?” Anna replied, “Well, I know most newcomers don’t keep their commitment to the club, but I thought that Cora would be different. She said she would come every day and practice.” Just as Jane was about to respond to her, the door swung open. There she was!

Cora walked in like a wounded soldier with bandages on her face and arms. Surprised, Anna and Jane simply looked at her with their eyes wide open. Cora explained, “I’m sorry I’ve been absent. I got into a bicycle accident, and I was in the hospital for two days. Finally, the doctor gave me the okay to practice.” Anna said excitedly, “No problem! We’re thrilled to have you back!” Then, Jane gave Anna an apologetic look, and she responded with a friendly pat on Jane’s shoulder.

체육관에서, 태권도 동아리 회원들이 부지런히 연습하고 있었다. 일부는 가능한 한 높이 발차기를 하려고 애쓰고 있었고, 일부는 겨루기 패드 치기를 하고 있었다. 동아리 반장인 Anna는 신입 회원들에게 기본 동작을 가르치고 있었다. 바로 옆에서 그녀의 친구인 Jane이 Anna를 보조하고 있었다. Jane은 Anna가 체육관의 출입문을 힐끗 보고 있다는 것을 알아차렸다. 그녀는 누군가를 기다리고 있는 것처럼 보였다. 드디어, Anna가 휴식을 취할 때 Jane이 그녀에게 다가와서 "야. Cora를 기다리고 있니?"라고 물었다.

Anna는 걱정스럽게 고개를 끄덕여 그 질문에 응답했다. 사실, Jane은 자기 친구가 무엇을 생각하고 있는지 알고 있었다. Cora는 신입 회원인데, 그녀에게 Anna가 동아리에 가입하라고 직접 청했었다. Anna는 그녀를 진정으로 마음에 들어 했다. 자기 비용이 빠듯했지만, Anna는 Cora에게 태권도 도복을 사주었다. 그것을 받았을 때, Cora는 그녀에게 고마움을 표시하면서 "매일 연습하러 와서 열심히 할 거야."라고 약속했다. 하지만, 예상과 달리, 그녀는 연습하러 딱 한 번 왔고 그러고 나서 다시는 나타나지 않았다.

Cora가 여러 번의 연습에 빠졌기 때문에 Anna는 무슨 일이 있었을지 궁금했다. 반면 Jane은 실망하여 "아직도 그녀를 기다리는 거야. 응? 나는 네가 실망감이나 화를 느끼지 않는 것을 믿을 수가 없어. 그녀에 대해 잊어버리는 것이 어때?"라고 재단하듯이 말했다. Anna는 "글쎄, 난 대다수의 신참자가 동아리에 대한 약속을 지키지 않는 것은 알지만, Cora는 다를 것이라고 생각했어. 그녀는 매일 와서 연습할 거라고 말했거든." 이라고 대답했다. Jane이 바로 막 그녀에게 응답하려 했을 때, 문이 활짝 열렸다. 거기 그녀가 왔다!

Cora는 얼굴과 두 팔에 붕대를 하고서 부상당한 군인처럼 걸어 들어왔다. 놀란 Anna와 Jane은 두 눈을 크게 뜨고서 그녀를 바라볼 뿐이었다. Cora는 "계속 오지 못해서 미안해. 난 자전거 사고가 나서 이틀 동안 입원해 있었어. 마침내 의사 선생님이 나에게 연습해도 좋다는 동의를 해주셨어."라고 설명했다. Anna가 "괜찮아! 우리는 네가 돌아오게 되어 신난다." 라고 흥분하여 말했다. 그때, Jane이 Anna에게 사과하는 표정을 해 보이자, 그녀는 Jane의 어깨를 다정하게 쳐서 응답했다.

My name is Donna Williams, a science teacher at Rogan High School. I am planning a s_____ w_____ for our science teachers. We are i_____ in learning how to teach online s_____ classes. I have been i_____ with your ideas about using internet platforms for science classes. Since you are an e_____ in online education, I would like to ask you to deliver a special l_____ at the workshop scheduled for next month. I am sure the lecture will help our teachers manage s_____ online science classes, and I hope we can l_____ from your insights. I am looking f_____ to hearing from you.

저의 이름은 Donna Williams이며, Rogan 고등학교의 과학 교사입니다. 저는 우리 학교의 과학 교사들을 위한 특별 워크숍을 계획하고 있습니다. 저희는 온라인 과학 수업을 가르치는 방법을 배우는 데 관심을 가지고 있습니다. 저는 과학 수업에 인터넷 플랫폼을 사용하는 데 대한 귀하의 아이디어에 감명을 받았습니다. 귀하가 온라인 교육의 전문가이기에, 저는 다음 달에 계획된 워크숍에 귀하가 특별 강연을 해주시기를 부탁드리고자 합니다. 저희 교사들이 성공적인 온라인 과학 수업을 해내는 데 강의가 도움이 되리라고 확신하며 귀하의 통찰력으로부터 저희가 배울 수 있기를 희망합니다. 귀하의 답변을 고대하고 있겠습니다.

19.

It was Evelyn's first time to explore the Badlands of Alberta, famous across Canada for its n_____ d_____ fossils. As a young a_____ bone-hunter, she was overflowing with a_____. She had not t_____ this far for the bones of c_____ dinosaur species. Her life-long dream to find rare f_____ of dinosaurs was about to come true. She began eagerly s_____ for them. After many hours of w_____ throughout the d_____ lands, however, she was unsuccessful. Now, the sun was beginning to set, and her goal was still far b_____ her reach. Looking at the slowly d_____ ground before her, she sighed to herself, "I can't b_____ I came all this way for nothing. What a w_____ of time!"

캐나다 전역에서 그곳의 수많은 공룡 화석으로 유명한 앨버타주의 Badlands를 탐험하는 것이 Evelyn에게는 처음이었다. 젊은 아마추어 (공룡) 뼈 발굴자로서, 그녀는 기대감으로 가득 차 있었다. 그녀는 흔한 공룡 종의 뼈를 위해서 이렇게 멀리까지 이동하지는 않았다. 진기한 공룡 화석을 발견하고자 하는 그녀의 평생에 걸친 꿈이 막 실현되려고 하고 있었다. 그녀는 열심히 그것들을 찾기 시작했다. 하지만 황량한 땅을 여러 시간 헤매고 다닌 후에도 그녀는 성과를 얻지 못했다. 이제 해가 지기 시작하고 있었고, 그녀의 목표는 여전히 멀리 그녀의 손이 닿지 않는 곳에 있었다. 천천히 어두워지는 그녀 앞의 지면을 바라보면서 그녀는 혼자 한숨을 쉬며 말했다. "이렇게 먼 길을 와서 아무것도 얻지 못하다니 믿을 수가 없어. 무슨 시간 낭비란 말인가!"

20.

One of the most common mistakes made by o_____ when they first c_____ e_____ with social media is that they focus too much on social media tools and p_____ and not enough on their business objectives. The r_____ of s_____ in the social web for businesses is that c_____ a social media program begins not with i_____ into the latest social media tools and channels but with a t_____ understanding of the organization's own goals and objectives. A social media program is not merely the f_____ of a vague need to m_____ a "presence" on popular social networks because "everyone else is doing it." "Being in social media" serves no p_____ in and of itself. In order to serve any purpose at all, a social media p_____ must either solve a problem for the organization and its customers or result in an i_____ of some sort (preferably a measurable one). In all things, p_____ drives s_____. The world of social media is no d_____.

조직이 소셜 미디어로 실험하는 것을 처음 고려할 때 범하는 가장 일반적인 실수 중 하나는 너무 지나치게 소셜 미디어 도구와 플랫폼에 중점을 두고 조직 자체의 사업 목표에는 충분히 중점을 두지 않는 것이다. 기업을 위한 소셜 웹에서의 성공의 실제는 소셜 미디어 프로그램을 고안하는 것이 최신 소셜 미디어 도구와 채널에 대한 통찰력이 아니라 조직 자체의 목적과 목표에 대한 철저한 이해와 더불어 시작된다는 것이다. 소셜 미디어 프로그램은 그저 '다른 모든 이가 하고 있기 때문에 인기 소셜 네트워크상에서 '존재'를 관리해야 할 막연한 필요를 이행하는 것이 아니다. '소셜 미디어에 있다는 것'은 그 자체로는 아무 쓸모도 없다. 조금이라도 어떤 쓸모가 있으려면, 소셜 미디어상의 존재는 조직과 조직의 고객을 위해 문제를 해결하거나 어떤 종류의 개선이라는 결과(될 수 있으면 측정 가능한 결과)를 가져와야 한다. 어떤 일이든, 목적이 성공을 이끌어낸다. 소셜 미디어의 세계도 다르지 않다.

21.

Scientists have no special purchase on moral or e_____ decisions; a c_____ scientist is no more qualified to c_____ on health care r_____ than a physicist is to judge the c_____ of bee colony collapse. The very f_____ that c_____ e_____ in a s_____ domain lead to i_____ in many others. In some cases lay people — farmers, fishermen, patients, native peoples — may have r_____ experiences that scientists can learn from. Indeed, in recent years, scientists have begun to r_____ this: the Arctic Climate Impact Assessment i_____ o_____ g_____ from local native groups. So our trust needs to be l_____, and focused. It needs to be very particular. B_____ trust will get us into at least as much t_____ as no trust at all. But without some degree of trust in our d_____ experts — the men and women who have d_____ their lives to sorting out tough questions about the natural world we live in — we are p_____, in effect not k_____ whether to make ready for the morning c_____ or not.

과학자들은 도덕적 혹은 윤리적 결정에 대한 특별한 강점이 없으며, 기후 과학자가 의료 개혁에 대해 견해를 밝힐 자격이 없는 것은 물리학자가 꿀벌 집단의 붕괴 원인을 판단할 자격이 없는 것과 같다. 전문화된 영역에서의 전문 지식을 만들어내는 바로 그 특징이 많은 다른 영역에서의 무지로 이어진다. 어떤 경우에는, 전문가가 아닌 사람들, 즉 농부, 어부, 환자, 토착민이, 과학자들이 그것으로부터 배울 수 있는 관련 경험을 가지고 있을 수 있다. 실제로, 최근 들어 과학자들은 이 점을 인식하기 시작 했는데, 북극 기후 영향 평가는 지역 토착 집단에게서 수집된 관찰을 포함한다. 그러므로 우리의 신뢰는 한정되고 초점이 맞춰질 필요가 있다. 그것은 매우 특정할 필요가 있다. 맹목적 신뢰는 최소한 신뢰가 전혀 없는 것만큼이나 우리를 문제에 봉착하게 할 것이다. 하지만 우리의 지정된 전문가들, 즉 평생을 우리가 사는 자연 세계에 관한 어려운 질문들을 처리하는 데 생애를 바친 남녀들에 대한 어느 정도의 신뢰가 없으면, 우리는 마비되고, 사실상 아침 통근을 위해 준비해야 할지 말아야 할지를 알지 못할 것이다.

22.

Environmental hazards include biological, physical, and c_____ ones, along with the human behaviors that p_____ or allow e_____. Some environmental contaminants are difficult to avoid (the breathing of polluted air, the drinking of chemically contaminated public drinking water, noise in open public spaces); in these circumstances, e_____ is largely i_____. Reduction or e_____ of these factors may r_____ societal action, such as p_____ a_____ and public health measures. In many countries, the fact that some e_____ h_____ are difficult to avoid at the i_____ level is felt to be more morally egregious than those h_____ that can be a_____. Having no choice but to drink water c_____ with very high levels of arsenic, or being forced to p_____ b_____ in tobacco smoke in restaurants, o_____ people more than the _____ choice of whether an individual smokes tobacco. These factors are important when one c_____ how change (risk reduction) happens.

환경 위험 요인에는 생물학적, 물리적, 화학적 위험 요인과 함께 노출을 조장하거나 허용하는 인간의 행동이 포함된다. (오염된 공기의 호흡, 화학적으로 오염된 공공 식수의 음용, 개방된 공공장소에서의 소음처럼) 일부 환경 오염 물질은 피하기가 어렵고, 이러한 상황에서 노출은 대개 자기도 모르게 이루어진다. 이러한 요인의 감소 또는 제거에는 대중의 인식 및 공중 보건 조치와 같은 사회적 조치가 필요할 수도 있다. 많은 국가에서, 일부 환경적 위험 요인이 개인 수준에서 피하기 어렵다는 사실은 피할 수 있는 그 위험 요인보다 도덕적으로 더 매우 나쁜 것으로 느껴진다. 어쩔 수 없이 매우 높은 수준의 비소로 오염된 물을 마실 수밖에 없는 것이나, 식당에서 담배 연기를 수동적으로 들이마시도록 강요당하는 것은 개인이 담배를 피울지 말지에 대한 개인적인 선택보다 더 사람들을 화나게 한다. 이러한 요인들은 변화(위험 감소)가 어떻게 일어나는지를 고려할 때 중요하다.

23.

Scientists use paradigms rather than believing them. The use of a paradigm in r_____ t_____ a_____ r_____ problems by e_____ s_____ concepts, symbolic expressions, experimental and mathematical tools and procedures, and even some of the same theoretical statements. Scientists need only u_____ how to use these various elements in ways that others would accept. These elements of shared p_____ thus need not presuppose any c_____ unity in scientists' beliefs about what they are doing when they use them. Indeed, one role of a paradigm is to e_____ scientists to work s_____ without having to p_____ a d_____ a_____ of what they are doing or what they believe about it. Thomas Kuhn n_____ that scientists "can agree in their identification of a paradigm without agreeing on, or even a_____ to produce, a full interpretation or rationalization of it. Lack of a s_____ i_____ or of an agreed r_____ to rules will not p_____ a paradigm from guiding research."

과학자들은 패러다임을 믿기보다는 그것을 사용한다. 연구에서 패러다임의 사용은 일반적으로 공유된 개념, 상징적 표현, 실험 및 수학적 도구와 절차, 그리고 심지어 동일한 이론적 진술의 일부를 사용함으로써 관련된 문제들을 다룬다. 과학자들은 다른 사람들이 받아들일 방식으로 이러한 다양한 요소들을 사용하는 '방법'을 이해하기만 하면 된다. 따라서 이러한 공유된 실행의 요소들은 과학자들이 그것들을 사용할 때 그들이 하고 있는 것에 관한 그들의 믿음에서 그 어떤 비슷한 통일성을 전제로 할 필요는 없다. 실제로, 패러다임의 한 가지 역할은 과학자들이 그들이 무엇을 하고 있는지 또는 그들이 그것에 관해 무엇을 믿고 있는지에 대한 상세한 설명을 제공할 필요 없이 성공적으로 일할 수 있게 하는 것이다. Thomas Kuhn이 언급하기를, 과학자들은 "패러다임에 대한 완전한 '해석'이나 '이론적 설명'에 동의하거나, 심지어 그런 것을 만들어 내려고 시도조차 하지 않고도, 그것(패러다임)을 '식별'하는 데 있어서 일치를 보일 수 있다. 표준적인 해석이나 규칙으로 축약되어 합의된 것이 없다 해도 패러다임이 연구를 안내하는 것을 막지는 못할 것이다."

24.

Mending and restoring objects often require even more c_____ than o_____ production. The preindustrial blacksmith made things to o_____ for people in his i_____ community; customizing the product, m_____ or t_____ it according to the user, was routine. C_____ would bring things back if something went wrong; r_____ was thus an e_____ of f_____. With industrialization and eventually with mass production, making things became the p_____ of machine tenders with limited k_____. But repair continued to require a larger g_____ of design and materials, an understanding of the whole and a c_____ of the designer's i_____. "Manufacturers all work by machinery or by vast s_____ of labour and not, so to speak, by hand," an 1896 Manual of Mending and Repairing e_____. "But all repairing must be done by hand. We can make every detail of a watch or of a gun by machinery, but the m_____ cannot m_____ it when broken, much less a clock or a pistol!"

물건을 고치고 복원하는 것에는 흔히 최초 제작보다 훨씬 더 많은 창의력이 필요하다. 산업화 이전의 대장장이는 가까이에 사는 마을 사람들을 위해 주문에 따라 물건을 만들었고, 제품을 주문 제작하는 것, 즉 사용자에게 맞게 그것을 수정하거나 변형하는 일이 일상적이었다. 고객들은 뭔가 잘못되면 물건을 다시 가져다주곤 했고, 따라서 수리는 제작의 연장이었다. 산업화와 결국 대량 생산이 이루어지면서, 물건을 만드는 것은 제한된 지식을 지닌 기계 관리자의 영역이 되었다. 그러나 수리에는 설계와 재료에 대한 더 큰 이해, 즉 전체에 대한 이해와 설계자의 의도에 대한 이해가 계속 요구되었다. 1896년의 Manual of Mending and Repairing의 설명에 따르면, "제조업자들은 모두 기계나 방대한 분업으로 일하고, 말하자면 수작업으로 일하지는 않는다." "그러나 모든 수리는 손으로 '해야 한다'. 우리는 기계로 손목시계나 총의 모든 세부적인 것을 만들 수 있지만, 고장 났을 때 기계는 그것을 고칠 수 없으며, 시계나 권총은 말할 것도 없다!"

고 2022년 대 수능 (2021 시행)

26.

Donato Bramante, born in Fermignano, Italy, began to p_____ early in his life. His father e_____ him to study painting. Later, he worked as an a_____ of Piero della Francesca in Urbino. Around 1480, he built s_____ churches in a new style in Milan. He had a close r_____ with Leonardo da Vinci, and they worked t_____ in that city. Architecture became his main interest, but he did not give up painting. Bramante moved to Rome in 1499 and p_____ in Pope Julius II's plan for the r_____ of Rome. He planned the new Basilica of St. Peter in Rome — one of the most a_____ building projects in the history of h_____. Bramante died on April 11, 1514 and was b_____ in Rome. His buildings i_____ other architects for centuries.

이탈리아의 Fermignano에서 태어난 Donato Bramante는 인생에서 일찍이 그림을 그리기 시작했다. 그의 아버지는 그에게 그림을 공부하도록 격려했다. 나중에, 그는 Urbino에서 Piero della Francesca의 조수로 일했다. 1480년경, 그는 Milan에 몇 개의 교회들을 새로운 양식으로 건축했다. 그는 Leonardo da Vinci와 친근한 관계를 맺었으며, 그들은 그 도시에서 함께 작업했다. 건축이 그의 주요한 관심사가 되었지만, 그는 그림을 포기하지 않았다. Bramante는 1499년에 Rome으로 이주해서 교황 Julius 2세의 Rome 재개발 계획에 참여했다. 그는 Rome의 성 베드로 대성당의 새로운 바실리카를 구상했는데, 그것은 인류 역사상 가장 야심 찬 건축 프로젝트 중 하나였다. Bramante는 1514년 4월 11일에 사망했으며 Rome에 묻혔다. 그의 건축물들은 여러 세기 동안 다른 건축가들에게 영향을 끼쳤다.

29.

Like whole individuals, cells have a l_____ s_____. During their life cycle (cell cycle), cell size, shape, and m_____ activities can change d_____. A cell is "born" as a twin when its mother cell divides, p_____ two daughter cells. Each d_____ cell is smaller than the mother cell, and e_____ for u_____ cases, each grows until it becomes as large as the mother cell was. During this time, the cell a_____ water, sugars, amino acids, and other nutrients and a_____ them into new, living protoplasm. After the cell has g_____ to the proper size, its metabolism s_____ as it either p_____ to divide or matures and differentiates into a s_____ cell. Both growth and development r_____ a c_____ and d_____ set of i_____ involving all cell parts. That cell metabolism and s_____ should be complex would not be s_____, but actually, they are rather simple and l_____. Even the most complex cell has only a small number of parts, each r_____ for a d_____, well-defined a_____ of cell life.

개체 전체와 마찬가지로, 세포도 수명을 가지고 있다. 그것의 생명 주기(세포 주기) 동안에, 세포의 크기, 모양, 물질대사 활동이 극적으로 변할 수 있다. 세포는 모세포가 분열할 때 쌍둥이로 '탄생'하여, 두 개의 딸세포를 생성한다. 각각의 딸세포는 모세포보다 더 작으며, 특이한 경우를 제외하고는 각각 모세포의 크기만큼 커질 때까지 자란다. 이 기간 동안, 세포는 물, 당, 아미노산, 그리고 다른 영양소들을 흡수하고 그것들을 새로운 살아있는 원형질로 조합한다. 세포가 적절한 크기로 성장한 후, 그것은 분열할 준비를 하거나 혹은 성숙하여 특화된 세포로 분화하면서 그것의 물질대사가 변화한다. 성장과 발달 둘 다 모든 세포 부분을 포함하는 일련의 복잡하고 역동적인 상호 작용을 필요로 한다. 세포의 물질대사와 구조가 복잡할 것임은 놀라운 것이 아니겠지만, 실제로 그것들은 꽤 간단하고 논리적이다. 가장 복잡한 세포조차도 그저 몇몇 부분만을 가지고 있는데, 각각은 세포 생명의 뚜렷하고, 명확한 측면을 맡고 있다.

30.

It has been suggested that "organic" methods, d_____ as those in which only n_____ products can be used as inputs, would be less d_____ to the biosphere. Large-scale adoption of "organic" farming methods, however, would r_____ yields and i_____ production costs for many major crops. Inorganic nitrogen s_____ are e_____ for m_____ moderate to high levels of productivity for many of the non-leguminous crop species, because o_____ supplies of nitrogenous materials often are either limited or more e_____ than inorganic nitrogen fertilizers. In addition, there are c_____ to the extensive use of either manure or legumes as "green manure" crops. In many cases, w_____ control can be very difficult or require much hand l_____ if chemicals cannot be used, and fewer people are w_____ to do this work as societies become w_____. Some methods used in "organic" farming, however, such as the s_____ use of crop rotations and specific c_____ of cropping and livestock enterprises, can make important c_____ to the sustainability of rural ecosystems.

천연 제품들만 투입물로 사용되는 방식으로 정의되는 '유기농' 방식은 생물권에 해를 덜 끼친다고 시사되어 왔다. 그러나 '유기농 경작 방식의 대규모 채택은 많은 주요 작물의 산출량을 감소시키고 생산비를 증가시키게 된다. 무기질 질소 공급은 많은 비(非)콩과 작물 종의 생산성을 중상 수준으로 유지하는 데 필수적인데, 그것은 질소성 물질의 유기적 공급이 무기 질소 비료보다 자주 제한적이거나 더 비싸기 때문이다. 게다가, '친환경적인 거름작물로 거름이나 콩과 식물의 광범위한 사용에는 제약이 있다. 많은 경우, 화학 물질이 사용될 수 없으면 잡초 방제가 매우 어렵거나 많은 손일이 필요할 수 있는데, 사회가 부유해짐에 따라 이 작업을 기꺼이 하려는 사람이 더 적을 것이다. 그러나 돌려짓기의 합리적인 사용과 경작과 가축 경영의 특정한 조합과 같은 '유기농 경작에서 사용되는 몇몇 방식들은 농촌 생태계의 지속 가능성에 중요한 이바지를 할 수 있다.

31.

Humour involves not just practical disengagement but c_____ disengagement. As long as something is funny, we are for the m_____ not c_____ with whether it is real or f_____, true or false. This is why we give c_____ leeway to people telling funny stories. If they are getting extra laughs by e_____ the silliness of a situation or even by making up a few details, we are happy to grant them c_____ licence, a kind of p_____ licence. Indeed, someone l_____ to a funny story who tries to c_____ the teller — 'No, he didn't spill the spaghetti on the keyboard and the monitor, just on the keyboard' — will p_____ be told by the other listeners to stop i_____. The creator of humour is putting ideas into people's heads for the p_____ those ideas will bring, not to p_____ accurate i_____.

유머는 실제적인 이탈뿐만 아니라 인식의 이탈을 포함한다. 어떤 것이 재미있다면, 우리는 잠깐 그것이 진짜인지 허구인지, 진실인지 거짓인지에 관해 관심을 두지 않는다. 이것이 우리가 재미있는 이야기를 하는 사람들에게 상당한 여지를 주는 이유이다. 만약 그들이 상황의 어리석음을 과장하거나 심지어 몇 가지 세부 사항을 꾸며서라도 추가 웃음을 얻고 있다면, 우리는 그들에게 기꺼이 희극적 파격, 일종의 시적 파격을 허락한다. 실제로, 재미있는 이야기를 듣고 있는 누군가가 '아니야, 그는 스파게티를 키보드와 모니터에 쏟은 것이 아니라 키보드에만 쏟았어.'라며 말하는 사람을 바로잡으려고 하면 그는 아마 듣고 있는 다른 사람들에게서 방해하지 말라는 말을 들을 것이다. 유머를 만드는 사람은 사람들의 머릿속에 생각을 집어넣고 있는데, 그 생각이 가져올 재미를 위해서이지 정확한 정보를 제공하기 위해서가 아니다.

32.

News, especially in its televised form, is c_____ not only by its choice of topics and s_____ but by its v_____ and v_____ idioms or modes of address. Presentational styles have been subject to a t_____ between an informational-educational p_____ and the need to e_____ us entertainingly. While c_____ affairs programmes are often 'serious' in tone sticking to the 'rules' of balance, more popular programmes adopt a friendly, lighter, idiom in which we are i_____ to consider the impact of particular news items from the p_____ of the 'average person in the street'. Indeed, c_____ news c_____ has come to rely on an i_____ use of faster editing tempos and 'flashier' presentational styles including the use of logos, sound-bites, r_____ visual cuts and the 'star quality' of news readers. Popular f_____ can be said to e_____ understanding by engaging an a_____ u_____ to endure the longer verbal o_____ of older news formats. However, they a_____ work to reduce understanding by failing to p_____ the s_____ c_____ for news events.

뉴스, 특히 텔레비전으로 방송되는 형태는 그것이 선택하는 주제와 이야기뿐만 아니라 그것의 언어적, 시각적 표현 양식이나 전달 방식에 의해서도 구성된다. 표현 방식은 정보 제공 및 교육적 목적과 재미있게 우리의 주의를 끌 필요성 사이의 긴장 상태에 영향을 받아 왔다. 시사 프로그램들이 흔히 균형이라는 '규칙'을 고수하면서 어조가 '진지하지만, 더 대중적인 프로그램들은 친근하고 더 가벼운 표현 양식을 채택하는데 그 표현 양식에서 우리는 '거리에서 만나는 보통 사람'의 관점에서 특정 뉴스 기사의 영향을 고려해보게 된다. 사실, 현대의 뉴스 구성은 로고, 짤막한 방송용 어구, 빠른 시각적 편집 화면, 그리고 뉴스 독자의 '스타성'을 이용하는 것을 포함한 더 빠른 편집 속도와 '더 현란한 표현 방식을 더 많이 이용하는 것에 의존하게 되었다. 대중적인 구성은 장황한 언어를 지향하는 낡은 뉴스 구성 방식을 견딜 의사가 없는 시청자의 주의를 끌어서 이해를 높였다고 할 수 있다. 하지만 그것은 뉴스 사건에 관한 구조적 맥락을 제공하지 못함으로써 아마 틀림없이 이해를 감소시키는 효과가 있다.

33.

Elinor Ostrom found that there are several factors c_____ to bringing about s_____ i_____ s_____ to the problem of the c_____. She pointed out, for instance, that the actors a_____ by the rules for the use and care of resources must have the right to p_____ in decisions to change the rules. For that reason, the people who monitor and c_____ the b_____ of users should also be users and/or have been given a m_____ by all users. This is a significant insight, as it shows that p_____ are poor for a centrally d_____ solution to the problem of the commons coming from a state power in c_____ with a local solution for which users a_____ p_____ responsibility. Ostrom also emphasizes the importance of d_____ decision processes and that all users must be given a_____ to local forums for solving problems and conflicts among themselves. Political institutions at central, regional, and l_____ levels must a_____ users to devise their own regulations and i_____ e_____ o_____.

Elinor Ostrom은 공유지의 문제에 대한 안정적인 제도적 해결책을 가져오는 데 중요한 몇 가지 요인이 있음을 알게 되었다. 예를 들어, 그녀는 자원의 이용 및 관리 규칙의 영향을 받는 행위자에게 규칙을 변경하는 결정에 참여할 권리가 있어야 한다고 지적했다. 그러한 이유로 이용자의 행동을 감시하고 통제하는 사람 또한 이용자이고, 이용자이거나 모든 이용자에 의한 위임을 받았어야 한다. 이것은 중요한 통찰인데, 이용자가 개인적 책임을 지는 지역적인 해결책에 비해 국가 권력에서 나오는 공유지 문제에 대한 중앙 (정부) 지향적 해결책의 전망이 열악하다는 것을 그것이 보여주기 때 문이다. Ostrom은 또한 민주적 의사결정 과정의 중요성과 모든 이용자에게 그들 사이의 문제와 갈등을 해결하기 위한 지역 포럼에 참여할 권한이 주어져야 한다고 강조한다. 중앙, 지방 및 지역 차원의 정치 기관들은 이용자가 자체 규정을 고안하고 독립적으로 준수할 수 있도록 해야 한다.

34.

Precision and determinacy are a necessary r_____ for all meaningful s_____ d_____, and progress in the sciences is, to a large e_____, the ongoing process of a_____ ever greater p_____. But historical representation puts a premium on a proliferation of representations, hence not on the r_____ of one representation but on the p_____ of an ever more varied set of representations. Historical insight is not a matter of a c_____ "narrowing down" of previous options, not of an approximation of the truth, but, on the contrary, is an "explosion" of p_____ points of view. It therefore aims at the unmasking of p_____ illusions of d_____ and precision by the production of new and a_____ representations, rather than at a_____ truth by a careful analysis of what was right and wrong in those p_____ representations. And from this perspective, the d_____ of historical insight may indeed be r_____ by the outsider as a process of creating ever more confusion, a c_____ questioning of certainty and precision seemingly a_____ already, rather than, as in the sciences, an ever greater a_____ to the truth.

정확성과 확정성은 모든 의미 있는 과학 토론을 위한 필요조건이며, 과학에서의 발전은 상당 부분, 훨씬 더 높은 정확성을 달성하는 계속 진행 중인 과정이다. 그러나 역사적 진술은 진술의 증식을 중요시하는데, 이는 한 가지 진술의 정제가 아닌, 훨씬 더 다양한 진술 집합의 생성에 중요성을 두는 것이다. 역사적 통찰은 이전에 선택한 것들을 지속해서 '좁혀 가는 것의 문제, 즉 진리에 근접함의 문제가 아니라, 반대로 가능한 관점들의 '폭발적 증가'이다. 그러므로 그것은 이전의 진술에서 무엇이 옳고 틀렸는지에 대한 신중한 분석에 의해 진리를 획득하는 것이 아니라, 새롭고 대안적인 진술의 생성에 의해 확정성과 정확성에 대해 이전에 가진 환상의 정체를 드러내는 것을 목표로 한다. 그리고 이러한 관점에서 보면, 역사적 통찰의 발전은 과학에서처럼 진리에 훨씬 더 많이 근접함보다 는, 훨씬 더 큰 혼란을 만들어내는 과정, 즉 이미 획득한 것처럼 보이는 확실성과 정확성에 대한 지속적인 의문 제기로 외부인에게 진정 여겨질 수도 있다.

35.

Since their introduction, information systems have s_____ changed the way business is c_____. This is p_____ true for business in the shape and form of c_____ between firms that involves an i_____ of value chains across m_____ units. The r_____ networks do not only cover the business units of a s_____ firm but typically also i_____ multiple units from different firms. As a consequence, firms do not only need to c_____ their internal o_____ in order to e_____ s_____ business performance; they also need to take into a_____ the entire e_____ of units s_____ them. In order to allow these different units to c_____ successfully, the e_____ of a c_____ p_____ is c_____.

정보 시스템은 도입 이래로 사업 수행 방식을 상당히 변화시켜왔다. 이는 특히 다수의 부문에 걸쳐 가치 체인의 통합을 수반하는 기업 간의 협력 형태와 유형의 사업에 특히 해당된다. 그 결과로 나타내는 네트워크는 단일 기업의 사업 부문을 포함할 뿐만 아니라, 서로 다른 기업의 여러 부문을 포함하기도 한다. 결과적으로, 기업은 지속 가능한 사업성과를 보장하기 위해 그들 내부 조직에 주의를 기울일 필요가 있을 뿐만 아니라, 자신들을 둘러싸고 있는 부문들의 전체 생태계를 고려할 필요도 있다. 이 서로 다른 부문들이 성공적으로 협력할 수 있도록 하기 위해서는 공동 플랫폼의 존재가 매우 중요하다.

36.

According to the market response model, it is i_____ prices that drive providers to s_____ for new sources, innovators to substitute, consumers to conserve, and a_____ to e_____. Taxing certain goods or services, and so increasing prices, should r_____ in either d_____ use of these resources or c_____ i_____ of new sources or options. The money r_____ through the tax can be used directly by the g_____ either to supply services or to search for alternatives. Many e_____ of such "green taxes" exist. Facing l_____ costs, labor expenses, and r_____ costs in the p_____ of garbage disposal, for example, some cities have r_____ households to dispose of all waste in special trash bags, p_____ by consumers themselves, and often costing a dollar or more each. The results have been g_____ increased recycling and more careful a_____ by c_____ to packaging and waste. By internalizing the costs of trash to consumers, there has been an o_____ decrease in the flow of g_____ from households.

시장 반응 모형에 따르면, 공급자가 새로운 공급원을 찾게 하고, 혁신가가 대용하게 하고, 소비자가 아껴 쓰게 하고, 대안이 생기게 하는 것은 바로 가격의 인상이다. 특정 재화나 서비스에 과세하여 가격이 인상되면 이러한 자원의 사용이 줄거나 새로운 공급원 또는 선택사항의 창조적 혁신을 낳을 것이다. 세금을 통해 조성된 돈은 정부가 직접 서비스를 공급하거나 대안을 모색하는 데 사용할 수 있다. 그러한 '환경세'의 많은 예가 존재한다. 예를 들어, 쓰레기 매립비용, 인건비, 쓰레기 처리를 준비하는 데 관련된 비용에 직면한 일부 도시는 가정이 모든 폐기물을 소비자가 직접 구입한, 각각 흔히 1달러 또는 그 이상씩 드는 특별 쓰레기봉투에 담아 처리하도록 요구해왔다. 그 결과 재활용이 크게 증가했고 소비자가 포장과 폐기물에 더 세심한 주의를 기울이게 되었다. 소비자에게 쓰레기 비용을 자기 것으로 만들게 함으로써, 가정에서 나오는 쓰레기 흐름의 감소가 관찰되었다.

37.

In spite of the likeness between the fictional and real world, the f_____ w_____ d_____ from the real one in one important r_____. The e_____ world f_____ by the i_____ is in principle an i_____ chaos of events and d_____ before it is organized by a human mind. This chaos only gets p_____ and m_____ when perceived by a human mind. Because of the inner q_____ with which the individual is e_____ through h_____ and environment, the mind functions as a filter; every outside i_____ that passes through it is filtered and i_____. However, the world the reader e_____ in literature is already processed and f_____ by another consciousness. The author has s_____ the c_____ according to his own worldview and his own c_____ of r_____, in an attempt to be n_____ and o_____ or convey a s_____ view on the world. Whatever the motives, the author's subjective c_____ of the world stands between the reader and the o_____, untouched world on which the story is based.

허구의 세계와 현실의 세계 사이의 유사성에도 불구하고 허구의 세계는 하나의 중요한 측면에서 현실 세계로부터 벗어난다. 개인이 직면한 기존(현실) 세계는 이론상으로는 인간의 정신에 의해 조직되기 전에는 사건들과 세부 사항들의 무한한 혼돈 상태이다. 이 혼돈 상태는 인간의 정신에 의해 인식될 때만이 처리되고 수정된다. 개인이 유산과 환경을 통해 부여받은 내적 특성 때문에 그러한 정신은 그것을 통과하는 모든 외부의 인상이 걸러지고 해석되는 여과기 역할을 한다. 그러나 문학에서 독자가 접하는 세계는 이미 또 다른 의식에 의해 처리되고 여과되어 있다. 작가는 중립적이고 객관적이려는, 또는 세계에 대한 주관적인 견해를 전달하려는 시도에서 자신의 세계관과 적절성에 대한 자신의 개념에 따라 내용을 선정했다. 동기가 무엇이든, 세계에 대한 작가의 주관적인 개념은 독자와 이야기의 기반이 되는 원래의 손대지 않은 세계 사이에 존재한다.

38.

Introduction of robots into factories, while e_____ of human workers is being r_____, creates worry and fear. It is the r_____ of m_____ to p_____ or, at least, to ease these fears. For example, robots could be i_____ only in new plants rather than replacing humans in e_____ a_____ lines. Workers should be included in the planning for new factories or the introduction of robots into e_____ plants, so they can p_____ in the process. It may be that robots are needed to r_____ manufacturing costs so that the company r_____ competitive, but planning for such cost reductionsshould be done jointly by labor and management. R_____ current employees for new positions within the company will also greatly r_____ their fear of being laid off. Since robots are particularly good at highly r_____ simple motions, the replaced human workers should be m_____ to positions where j_____ and d_____ beyond the abilities of robots are r_____.

공장에 로봇을 도입하는 것은, 인간 노동자의 고용이 줄어들면서 걱정과 두려움을 불러일으킨다. 이러한 두려움을 예방하거나 최소한 완화하는 것은 경영진의 책임이다. 예를 들어, 로봇은 기존 조립 라인에서 인간을 대체하는 대신 새로운 공장에만 도입될 수 있다. 노동자는 새로운 공장을 계획하거나 기존의 공장에 로봇을 도입하는 데 포함되어야 하는데, 그렇게 함으로써 그들은 그 과정에 참여할 수 있다. 회사가 경쟁력을 유지하도록 제조원가를 낮추기 위해 로봇이 필요할 수도 있지만, 그러한 원가절감을 위한 계획은 노사가 함께해야 한다. 회사 내 새로운 직책을 위해 현재 직원을 재교육하면 해고에 대한 두려움도 또한 크게 줄어들 것이다. 로봇은 특히 매우 반복적인 단순 동작을 잘하기 때문에 교체된 인간 노동자는 로봇의 능력을 넘어선 판단과 결정이 필요한 위치로 옮겨져야 한다.

39.

Cinema is valuable not for its ability to make v_____ the h_____ outlines of our reality, but for its ability to r_____ what reality itself veils — the d_____ of fantasy. This is why, to a person, the first great theorists of film d_____ the introduction of sound and other technical i_____ (such as color) that pushed film in the d_____ of realism. Since cinema was an entirely fantasmatic art, these innovations were c_____ u_____. And what's worse, they could do nothing but turn filmmakers and a_____ away from the fantasmatic dimension of cinema, potentially t_____ film into a mere delivery device for representations of reality. As long as the i_____ of the silent black and white film p_____, one could not take filmic fantasies for r_____ of reality. But sound and color t_____ to c_____ just such an i_____, thereby d_____ the very essence of film art. As Rudolf Arnheim puts it, "The c_____ power of the artist can only come into play where r_____ and the m_____ of representation do not coincide."

영화는 우리 현실의 숨겨진 윤곽을 보이게 만드는 능력 때문이 아니라 현실 자체가 가리고 있는 것, 즉 환상의 차원을 드러내는 능력 때문에 가치가 있다. 이것이 최초의 위대한 영화 이론가들이 영화를 사실주의 쪽으로 밀어붙였던 소리와 (색채와 같은) 다른 기술 혁신의 도입을 이구동성으로 비난한 이유이다. 영화는 전적으로 환상적인 예술이었기 때문에 이러한 혁신은 완전히 불필요했다. 그리고 설상가상으로 그것들은 잠재적으로 영화를 현실의 묘사를 위한 단순한 전달 장치로 변형시키면서, 영화 제작자와 관객을 영화의 환상적인 차원에서 멀어지게 할 수 있을 뿐이었다. 무성 흑백 영화의 비현실주의가 지배하는 동안은 영화적 환상을 현실에 대한 묘사로 착각할 수 없었다. 그러나 소리와 색채는 바로 그러한 착각을 만들겠다고 위협하여 영화 예술의 바로 그 본질을 파괴했다. Rudolf Arnheim이 표현한 것처럼 "예술가의 창의적 힘은 현실과 묘사의 매체가 일치하지 않는 곳에서만 발휘될 수 있다."

40.

Philip Kitcher and Wesley Salmon have suggested that there are two possible a_____ among philosophical theories of e_____. One is the view that s_____ explanation consists in the u_____ of broad bodies of phenomena under a m_____ number of generalizations. According to this view, the (or perhaps, a) goal of science is to c_____ an e_____ f_____ of laws or generalizations that are capable of s_____ all o_____ phenomena. Scientific explanations o_____ and systematize our k_____ of the e_____ world; the more economical the systematization, the deeper our understanding of what is e_____. The other view is the causal/mechanical approach. According to it, a scientific explanation of a phenomenon c_____ of u_____ the mechanisms that produced the p_____ of interest. This view sees the e_____ of individual events as primary, with the explanation of generalizations f_____ from them. That is, the explanation of scientific generalizations comes from the c_____ mechanisms that p_____ the regularities.

Philip Kitcher와 Wesley Salmon은 설명에 대한 철학적 이론 중 두 가지 가능한 대안이 있다고 제안했다. 하나는 과학적 설명이 최소한으로 적은 수의 일반화 아래에 광범위하게 많은 현상들을 '통합'하는 데 있다는 견해이다. 이 견해에 따르면 과학의 목표(혹은 어쩌면 한 가지 목표)는 모든 관찰할 수 있는 현상을 포섭할 수 있는 법칙이나 일반화의 경제적인 틀을 구성하는 것이다. 과학적 설명은 경험적 세계에 대한 우리의 지식을 조직하고 체계화하는데, 체계화가 더 경제적일수록, 설명되는 것에 대한 우리의 이해는 더 깊어진다. 다른 관점은 인과 관계적/기계론적 접근이다. 그것에 따르면, 어떤 현상에 대한 과학적인 설명은 관심 있는 그 현상을 만들어 낸 메커니즘을 밝혀내는 것으로 이루어져 있다. 이 관점은 개별 사건들에 대한 설명을 일차적으로 보고, 일반화에 대한 설명이 그것들로부터 흘러나온다고 본다. 즉, 과학적 일반화에 대한 설명은 규칙성을 만들어 내는 인과적 메커니즘에서 비롯된다.

[41 ~ 42]

Classifying things together into groups is s_____ we do all the time, and it isn't hard to see why. I_____ trying to shop in a s_____ where the food was a_____ in r_____ o_____ on the shelves: tomato soup next to the white b_____ in one aisle, chicken soup in the back next to the 60-watt light bulbs, one b_____ of cream cheese in front and another in aisle 8 near the cookies. The task of f_____ what you want would be time-consuming and e_____ difficult, if not impossible.

In the case of a supermarket, someone had to design the system of c_____. But there is also a ready-made system of classification e_____ in our language. The word "dog," for example, groups together a certain class of animals and d_____ them from other animals. Such a grouping may seem too o_____ to be called a classification, but this is only because you have already m_____ the word. As a child learning to speak, you had to work hard to learn the system of c_____ your parents were trying to teach you. Before you got the hang of it, you probably made m_____, like calling the cat a dog. If you hadn't learned to speak, the whole world would seem like the u_____ supermarket; you would be in the position of an i_____, for whom every object is new and u_____. In learning the principles of classification, therefore, we'll be learning about the s_____ that lies at the core of our language.

사물들을 묶어서 그룹으로 분류하는 것은 우리가 항상 하는 일이며, 그 이유를 이해하는 것은 어렵지 않다. 음식이 진열대에 마구잡이로 배열된 슈퍼마켓에서 쇼핑하려고 한다고 상상해 보라. 한 통로에서는 흰빵 옆에 토마토 수프가 있고, 치킨 수프는 뒤쪽에 있는 60와트 백열전구 옆에 있고, 한 크림치즈 브랜드는 앞쪽에, 또 다른 하나는 쿠키 근처의 8번 통로에 있다. 여러분이 원하는 것을 찾는 일은, 불가능하지는 않더라도, 시간이 많이 걸리고 매우 어려울 것이다.
슈퍼마켓의 경우, 누군가는 분류 체계를 설계해야 했다. 하지만 또한 우리 언어에 포함되어 있는 기성의 분류 체계도 있다. 예를 들어, '개'라는 단어는 특정 부류의 동물들을 함께 분류하여 다른 동물들과 구별한다. 분류라고 하기에는 그러한 분류가 너무 분명해 보일 수 있지만, 이것은 단지 여러분이 이미 그 단어를 숙달했기 때문이다. 말하기를 배우는 아이로서, 여러분은 부모님이 가르쳐주려 애썼던 분류 체계를 익히기 위해 열심히 노력해야 했다. 여러분이 그것을 이해하기 전에, 아마 고양이를 개라고 부르는 것과 같은 실수를 했을 것이다. 만약 여러분이 말하기를 배우지 않았다면, 온 세상이 정돈되지 않은 슈퍼마켓처럼 보일 것이다. 여러분은 모든 물건이 새롭고 낯선 유아의 처지에 있을 것이다. 그러므로, 분류의 원리를 배울 때, 우리는 언어의 핵심에 있는 구조에 대해 배우고 있는 것이다.

[43 ~ 45]

In the gym, members of the taekwondo club were busy p_____. Some were trying to kick as high as they could, and some were s_____ the s_____ pad. Anna, the head of the club, was teaching the new members basic moves. Close by, her friend Jane was a_____ Anna. Jane n_____ that Anna was g_____ at the e_____ door of the gym. She seemed to be e_____ someone. At last, when Anna took a break, Jane came over to her and asked, "Hey, are you waiting for Cora?"

Anna a_____ the question by n_____ u_____. In fact, Jane knew what her friend was thinking. Cora was a new member, whom Anna had p_____ i_____ to join the club. Anna really liked her. Although her b_____ was tight, Anna bought Cora a taekwondo uniform. When she r_____ it, Cora thanked her and p_____, "I'll come to practice and work hard every day." However, unexpectedly, she came to practice only once and then never showed up again.

Since Cora had missed s_____ practices, Anna wondered what could have happened. Jane, on the other hand, was d_____ and said judgingly, "Still waiting for her, huh? I can't b_____ you don't feel disappointed or angry. Why don't you f_____ about her?" Anna replied, "Well, I know most newcomers don't keep their c_____ to the club, but I thought that Cora would be d_____. She said she would come every day and practice." Just as Jane was about to r_____ to her, the door swung open. There she was!

Cora walked in like a wounded soldier with b_____ on her face and arms. S_____, Anna and Jane simply looked at her with their eyes wide open. Cora e_____, "I'm sorry I've been a_____. I got into a bicycle accident, and I was in the hospital for two days. Finally, the doctor gave me the okay to practice." Anna said e_____, "No problem! We're t_____ to have you back!" Then, Jane gave Anna an a_____ look, and she r_____ with a friendly pat on Jane's shoulder.

체육관에서, 태권도 동아리 회원들이 부지런히 연습하고 있었다. 일부는 가능한 한 높이 발차기를 하려고 애쓰고 있었고, 일부는 겨루기 패드 치기를 하고 있었다. 동아리 반장인 Anna는 신입 회원들에게 기본 동작을 가르치고 있었다. 바로 옆에서 그녀의 친구인 Jane이 Anna를 보조하고 있었다. Jane은 Anna가 체육관의 출입문을 힐끗 보고 있다는 것을 알아차렸다. 그녀는 누군가를 기다리고 있는 것처럼 보였다. 드디어, Anna가 휴식을 취할 때 Jane이 그녀에게 다가와서 "야. Cora를 기다리고 있니?"라고 물었다.

Anna는 걱정스럽게 고개를 끄덕여 그 질문에 응답했다. 사실, Jane은 자기 친구가 무엇을 생각하고 있는지 알고 있었다. Cora는 신입 회원인데, 그녀에게 Anna가 동아리에 가입하라고 직접 청했었다. Anna는 그녀를 진정으로 마음에 들어 했다. 자기 비용이 빠듯했지만, Anna는 Cora에게 태권도 도복을 사주었다. 그것을 받았을 때, Cora는 그녀에게 고마움을 표시하면서 "매일 연습하러 와서 열심히 할 거야."라고 약속했다. 하지만, 예상과 달리, 그녀는 연습하러 딱 한 번 왔고 그러고 나서 다시는 나타나지 않았다.

Cora가 여러 번의 연습에 빠졌기 때문에 Anna는 무슨 일이 있었을지 궁금했다. 반면 Jane은 실망하여 "아직도 그녀를 기다리는 거야. 응? 나는 네가 실망감이나 화를 느끼지 않는 것을 믿을 수가 없어. 그녀에 대해 잊어버리는 것이 어때?"라고 재단하듯이 말했다. Anna는 "글쎄, 난 대다수의 신참자가 동아리에 대한 약속을 지키지 않는 것은 알지만, Cora는 다를 것이라고 생각했어. 그녀는 매일 와서 연습할 거라고 말했거든." 이라고 대답했다. Jane이 바로 막 그녀에게 응답하려 했을 때, 문이 활짝 열렸다. 거기 그녀가 왔다!

Cora는 얼굴과 두 팔에 붕대를 하고서 부상당한 군인처럼 걸어 들어왔다. 놀란 Anna와 Jane은 두 눈을 크게 뜨고서 그녀를 바라볼 뿐이었다. Cora는 "계속 오지 못해서 미안해. 난 자전거 사고가 나서 이틀 동안 입원해 있었어. 마침내 의사 선생님이 나에게 연습해도 좋다는 동의를 해주셨어."라고 설명했다. Anna가 "괜찮아! 우리는 네가 돌아오게 되어 신난다." 라고 흥분하여 말했다. 그때, Jane이 Anna에게 사과하는 표정을 해 보이자, 그녀는 Jane의 어깨를 다정하게 쳐서 응답했다.

18.

My name is Donna Williams, a science teacher at Rogan High School. I am 1) **planning/ planned** a special workshop for our science teachers. We are 2) **interesting/ interested** in learning how to teach online science classes. I 3) **have impressed/ have been impressed** with your ideas about using internet platforms for science classes. Since you are an expert in online education, I would like to ask you 4) **to deliver/ delivering** a special lecture at the workshop scheduled for next month. I am sure the lecture will 5) **help/ be helped** our teachers manage 6) **successful/ successive** online science classes, and I hope we can learn from your insights. I am looking forward to 7) **hear/ hearing** from you.

19.

It was Evelyn's first time to 8) **explore/ be explored** the Badlands of Alberta, famous across Canada for its numerous dinosaur fossils. As a young amateur bone-hunter, she was overflowing with anticipation. She had not 9) **travelled/ been travelled** this far for the bones of common dinosaur species. Her life-long dream to find rare fossils of dinosaurs 10) **was/ were** about to come true. She began eagerly searching for them. After many hours of wandering throughout the deserted lands, however, she was unsuccessful. Now, the sun 11) **beginning/ was beginning** to set, and her goal was still far beyond her reach. 12) **Look/ Looking** at the slowly darkening ground before her, she sighed to herself, "I can't 13) **believe/ relieve** I came all this way for nothing. 14) **What/ How** a waste of time!"

20.

One of the most common mistakes 15) **made/ making** by organizations when they first consider experimenting with social media is 16) **that/ what** they focus too much on social media tools and platforms and not enough on their business objectives. The reality of 17) **success/ failure** in the social web for businesses is 18) **that/ what** 19) **create/ creating** a social media program begins not with insight into the latest social media tools and channels but with a thorough understanding of the organization's own goals and objectives. A social media program is not merely the fulfillment of a vague need to 20) **manage/ be managed** a "presence" on popular social networks because "everyone else is doing it." "Being in social media" serves no purpose in and of itself. In order to 21) **serve/ reserve** any purpose at all, a social media presence must either solve a problem for the organization and 22) **its/ it's** customers or result 23) **in/ from** an improvement of some sort (preferably a measurable one). In all things, purpose drives 24) **success/ failure**. The world of social media is no different.

21.

Scientists have no special purchase on moral or ethical decisions; a climate scientist is no more qualified to 25) **comment/ be commented** on health care reform than a physicist is to 26) **judge/ be judged** the causes of bee colony collapse. The very features 27) **that/ what** 28) **create/ remove** expertise in a specialized domain lead to 29) **ignorance/ knowledge** in many others. In some cases lay people — farmers, fishermen, patients, native peoples — may have relevant experiences that scientists can learn from. Indeed, in recent years, scientists have begun to 30) **recognize/ miss** this: the Arctic Climate Impact Assessment includes observations gathered from local 31) **naive/ native** groups. So our trust needs to be limited, and focused. It needs to be very particular. Blind trust will get us into at least as much trouble as no trust at all. But 32) **with/ without** some degree of trust in our designated experts — the men and

women who 33) **have been devoted/ have devoted** their lives to sorting out tough questions about the 34) **natural/ artificial** world we live in — we are paralyzed, in 35) **affect/ effect** not knowing whether to make ready for the morning commute or not.

22.

Environmental hazards include biological, physical, and chemical ones, 36) **along/ alone** with the human behaviors 37) **that/ what** promote or allow exposure. Some environmental contaminants are difficult to 38) **accept/ avoid** (the breathing of polluted air, the drinking of chemically contaminated public drinking water, noise in open public spaces); in these circumstances, exposure is largely 39) **voluntary/ involuntary**. Reduction or elimination of these factors may 40) **require/ be required** societal action, such as public awareness and public health measures. In many countries, the fact 41) **that/ what** some environmental hazards are difficult to avoid at the individual level 42) **felt/ is felt** to be more morally egregious than those hazards that can be avoided. 43) **Have/ Having** no choice but to drink water contaminated with very high levels of arsenic, or being forced to passively 44) **breath/ breathe** in tobacco smoke in restaurants, outrages people more than the personal choice of whether an individual smokes tobacco. These factors are important when one 45) **considering/ considers** how change (risk reduction) happens.

23.

Scientists use paradigms rather than believing 46) **them/ themselves**. The use of a paradigm in research typically 47) **address/ addresses** related problems by employing shared concepts, symbolic expressions, experimental and mathematical tools and procedures, and even some of the same theoretical statements. Scientists need only understand how to 48) **use/ be used** these various elements in ways that others would 49) **accept/ reject**. These elements of shared practice thus need not presuppose any comparable unity in scientists' beliefs about what they are 50) **doing/ done** when they use them. Indeed, one role of a paradigm is to enable scientists 51) **to work/ working** successfully without having to 52) **provide/ prevent** a detailed account of what they are doing or what they believe about it. Thomas Kuhn 53) **noting/ noted** 54) **that/ what** scientists "can agree in their identification of a paradigm without agreeing on, or even attempting to produce, a full interpretation or rationalization of it. Lack of a standard interpretation or of an agreed reduction to rules will not 55) **provide/ prevent** a paradigm 56) **wit/ from** guiding research."

24.

Mending and restoring objects often 57) **requiring/ require** even more creativity than original production. The preindustrial blacksmith 58) **made/ making** things to order for people in his immediate community; customizing the product, modifying or transforming it according to the user, was routine. Customers would bring things back if something went 59) **right/ wrong**; repair was thus an extension of fabrication. With industrialization and eventually with mass production, 60) **making/ made** things became the province of machine tenders with limited knowledge. But repair continued to 61) **require/ be required** a larger grasp of design and materials, an understanding of the whole and a comprehension of the designer's intentions. "Manufacturers all work by machinery or by vast subdivision of labour and not, so to speak, by hand," an 1896 Manual of Mending and Repairing 62) **explaining/ explained**. "But all repairing must be done by hand. We can make every 63) **detail/ details** of a watch or of a gun by machinery, but

the machine cannot mend it when 64) **breaking/ broken**, much less a clock or a pistol!"

26.

Donato Bramante, born in Fermignano, Italy, began to 65) **paint/ be painted** early in his life. His father 66) **encouraging/ encouraged** him 67) **to study/ studying** painting. Later, he worked as an assistant of Piero della Francesca in Urbino. Around 1480, he 68) **built/ was built** several churches in a new style in Milan. He had a close relationship with Leonardo da Vinci, and they worked together in that city. Architecture 69) **became/ becoming** his main interest, but he did not give up painting. Bramante moved to Rome in 1499 and 70) **participating /participated** in Pope Julius II's plan for the renewal of Rome. He 71) **planned/ was planned** the new Basilica of St. Peter in Rome — one of the most ambitious building projects in the history of humankind. Bramante 72) **died/ dyed** on April 11, 1514 and was buried in Rome. His buildings 73) **injected/ influenced** other architects for centuries.

29.

Like whole individuals, cells 74) **have/ behave** a life span. 75) **During/ While** their life cycle (cell cycle), cell size, shape, and metabolic activities can change dramatically. A cell is "born" as a twin when 76) **its/ it's** mother cell divides, producing two daughter cells. Each daughter cell is smaller than the mother cell, and except for unusual cases, each 77) **growing/ grows** until it becomes as large as the mother cell was. 78) **During/ While** this time, the cell absorbs water, sugars, amino acids, and other nutrients and 79) **assemble/ assembles** 80) **them/ themselves** into new, living protoplasm. After the cell has grown to the proper size, its metabolism shifts as it either prepares to divide or matures and differentiates into a specialized cell. Both growth and development 81) **requiring/ require** a complex and dynamic set of interactions involving all cell parts. That cell metabolism and structure should be 82) **simple/ complex** would not be surprising, but actually, they are rather simple and logical. Even the most complex cell 83) **having/ has** only a small number of parts, each responsible for a distinct, well-defined 84) **aspect/ respect** of cell life.

30.

It has been suggested that "organic" methods, 85) **defined/ defended** as those 86) **which/ in which** only natural products can be used as inputs, would be less damaging to the biosphere. Large-scale adoption of "organic" farming methods, however, would 87) **reduce/ increase** yields and increase production costs for many major crops. Inorganic nitrogen supplies are 88) **essential/ inessential** for maintaining moderate to high levels of productivity for many of the non-leguminous crop species, 89) **because/ because of** organic supplies of nitrogenous materials often are either limited or more expensive than inorganic nitrogen fertilizers. In addition, there are constraints to the extensive use of either manure or legumes as "green manure" crops. In many cases, weed control can be very difficult or 90) **require/ reject** much hand labor if chemicals cannot be 91) **using/ used**, and fewer people are 92) **willing/ reluctant** to do this work as societies become wealthier. Some methods used in "organic" farming, however, such as the sensible use of crop rotations and specific combinations of cropping and livestock enterprises, can 93) **make/ be made** important contributions to the sustainability of rural ecosystems.

31.

Humour involves not just practical disengagement

but cognitive disengagement. As long as something is funny, we are for the moment not concerned with whether 94) **there/ it** is real or fictional, true or false. This is why we give 95) **considerate/ considerable** leeway to people 96) **tell/ telling** funny stories. If they are getting extra laughs by exaggerating the silliness of a situation or even by making up a few details, we are happy to grant 97) **them/ themselves** comic licence, a kind of poetic licence. Indeed, someone listening to a funny story who tries to 98) **collect/ correct** the teller — 'No, he didn't spill the spaghetti on the keyboard and the monitor, just on the keyboard' — will probably be told by the other listeners to 99) **keep/ stop** interrupting. The creator of humour 100) **putting/ is putting** ideas into people's heads for the pleasure those ideas will bring, not to 101) **provide/ prevent** accurate information.

32.

News, especially in its televised form, 102) **is/ are** constituted not only by its choice of topics and stories but by 103) **its/ it's** verbal and visual idioms or modes of address. Presentational styles 104) **having/ have** been subject to a tension between an informational-educational purpose and the need to engage us entertainingly. 105) **During/ While** current affairs programmes are often 'serious' in tone sticking to the 'rules' of balance, more popular programmes adopt a friendly, lighter, idiom in which we are invited to 106) **consider/ be considered** the impact of particular news items from the perspective of the 'average person in the street'. Indeed, contemporary news construction has come to 107) **relay/ rely** on an increased use of faster editing tempos and 'flashier' presentational styles 108) **including/ concluding** the use of logos, sound-bites, rapid visual cuts and the 'star quality' of news readers. Popular formats can be 109) **saying/ said** to 110) **enhance/ be enhanced** understanding by engaging an audience 111) **willing/ unwilling** to endure the longer verbal orientation of older news formats. However, they arguably work to 112) **reduce/ increase** understanding by failing to 113) **provide/ prevent** the structural contexts for news events.

33.

Elinor Ostrom found that there are several factors critical to 114) **bring/ bringing** about stable institutional solutions to the problem of the commons. She 115) **pointed/ was pointed** out, for instance, 116) **that/ what** the actors affected by the rules for the use and care of resources must 117) **have/ behave** the right to participate in decisions to change the rules. For that reason, the people 118) **who/ whose** monitor and control the behavior of users should also be users and/or have been given a mandate by all users. This is a significant insight, as it shows 119) **that/ what** prospects are poor for a centrally directed solution to the problem of the commons coming from a state power in comparison with a local solution 120) **which/ for which** users assume personal responsibility. Ostrom also 121) **emphasizing/ emphasizes** the importance of democratic decision processes and that all users must be given 122) **access/ assess** to local forums for solving problems and conflicts among themselves. Political institutions at central, regional, and local levels must allow users 123) **to devise/ devising** their own regulations and independently ensure observance.

34.

Precision and determinacy are a necessary requirement for all meaningful scientific debate, and progress in the sciences 124) **is/ are**, to a large extent, the ongoing process of achieving ever greater precision. But historical representation 125) **putting/ puts** a premium on a proliferation of representations, hence not on the refinement of

one representation but on the production of an ever 126) **more/ less** varied set of representations. Historical 127) **sight/ insight** is not a matter of a continuous "narrowing down" of previous options, not of an approximation of the truth, but, on the contrary, is an "explosion" of possible points of view. It therefore 128) **aims/ argues** at the unmasking of previous illusions of determinacy and precision by the production of new and alternative representations, rather than at achieving truth by a 129) **careful/ careless** analysis of what was right and wrong in those previous representations. And from this perspective, the development of historical insight may indeed be 130) **regarded/ disregarded** by the outsider as a process of creating ever more 131) **confusion/ condition**, a continuous questioning of certainty and precision seemingly achieved already, rather than, as in the sciences, an ever greater approximation to the truth.

35.

Since their introduction, information systems 132) **having/ have** substantially changed the way business is conducted. This is particularly true for business in the shape and form of cooperation between firms 133) **that/ what** involves an integration of value chains across multiple units. The resulting networks do not only 134) **curve/ cover** the business units of a single firm but typically also 135) **include/ conclude** multiple units from different firms. As a consequence, firms do not only need to consider their internal organization in order to 136) **ensure/ be ensured** sustainable business performance; they also need to 137) **take/ be taken** into account the entire ecosystem of units surrounding them. In order to allow these different units 138) **to cooperate/ cooperating** successfully, the existence of a common platform is crucial.

36.

According to the market response model, it is 139) **increasing/ decreasing** prices that 140) **driving/ drive** providers to search for new sources, innovators to substitute, consumers to conserve, and alternatives to emerge. Taxing certain goods or services, and so increasing prices, should 141) **result/ insult** 142) **in/ from** either decreased use of these resources or creative innovation of new sources or options. The money 143) **risen/ raised** through the tax can be used directly by the government either to supply services or to search for alternatives. Many examples of such "green taxes" 144) **exist/ resist**. Facing landfill costs, labor expenses, and related costs in the provision of garbage disposal, for example, some cities 145) **have been required/ have required** households 146) **to dispose/ disposing** of all waste in special trash bags, purchased by consumers themselves, and often costing a dollar or more each. The results have been greatly 147) **increased/ decreased** recycling and more careful attention by consumers to packaging and waste. By internalizing the costs of trash to consumers, there has been an 148) **obeyed/ observed** decrease in the flow of garbage from households.

37.

In spite of the likeness between the fictional and real world, the fictional world 149) **deviating/ deviates** from the real one in one important respect. The 150) **existing/ insisting** world faced by the individual is in principle an infinite chaos of events and details before it 151) **organized/ is organized** by a human mind. This chaos only gets processed and modified when 152) **perceiving/ perceived** by a human mind. 153) **Because/ Because of** the inner qualities 154) **which/ with which** the individual is endowed through heritage and environment, the mind functions as a filter; every

outside impression 155) **that/ what** passes through it is filtered and interpreted. However, the world the reader encounters in literature is already processed and 156) **filtered/ filled** by another consciousness. The author has selected the content according to his own worldview and his own conception of relevance, in an attempt to be neutral and objective or convey a subjective view on the world. 157) **Whenever/ Whatever** the motives, the author's subjective conception of the world stands between the reader and the original, 158) **touched/ untouched** world 159) **which/ on which** the story is based.

38.

Introduction of robots into factories, 160) **during/ while** employment of human workers 161) **is/ are** being reduced, creates worry and fear. It is the responsibility of management to 162) **provide/ prevent** or, at least, to ease these fears. For example, robots could be introduced only in new plants rather than replacing humans in existing assembly lines. Workers should be 163) **included/ concluded** in the planning for new factories or the introduction of robots into existing plants, so they can participate in the process. It may be that robots 164) **needed/ are needed** to 165) **reduce/ increase** manufacturing costs so that the company remains competitive, but planning for such cost reductionsshould be done jointly by labor and management. 166) **Retrain/ Retraining** current employees for new positions within the company will also greatly reduce their fear of being laid off. Since robots are particularly good at highly repetitive simple motions, the replaced human workers should be moved to positions 167) **where/ which** judgment and decisions beyond the abilities of robots are required.

39.

Cinema is valuable not for its ability to make visible the hidden outlines of our reality, but for its ability to 168) **reveal/ hide** 169) **that/ what** reality itself veils — the dimension of fantasy. This is 170) **why/ because**, to a person, the first great theorists of film decried the introduction of sound and other technical innovations (such as color) 171) **that/ what** pushed film in the direction of realism. Since cinema was an entirely fantasmatic art, these innovations were completely unnecessary. And what's worse, they could do nothing but turn filmmakers and audiences away from the fantasmatic dimension of cinema, potentially 172) **transform/ transforming** film into a mere delivery device for representations of reality. As long as the irrealism of the silent black and white film predominated, one could not 173) **take/ be taken** filmic fantasies for representations of reality. But sound and color threatened to 174) **create/ remove** just such an illusion, thereby 175) **destroy/ destroying** the very essence of film art. As Rudolf Arnheim puts it, "The creative power of the artist can only come into play 176) **where/ which** reality and the medium of representation do not coincide."

40.

Philip Kitcher and Wesley Salmon 177) **have been suggested/ have suggested** 178) **that/ what** there are two possible alternatives among philosophical theories of explanation. One is the view that scientific explanation 179) **consists/ is consisted** in the unification of broad bodies of phenomena under a minimal number of generalizations. According to this view, the (or perhaps, a) goal of science is to 180) **construct/ be constructed** an economical framework of laws or generalizations that are capable of subsuming all observable phenomena. Scientific explanations organize and systematize our knowledge of the empirical world; the 181) **more/ less** economical the systematization, the deeper our understanding of what 182)

explained/ is explained. The other view is the causal/mechanical approach. According to it, a scientific explanation of a phenomenon consists of 183) **covering/ uncovering** the mechanisms that produced the phenomenon of interest. This view 184) **seeing/ sees** the explanation of individual events as primary, with the explanation of generalizations flowing from them. That is, the explanation of scientific generalizations 185) **come/ comes** from the causal mechanisms that produce the regularities.

[41 ~ 42]

Classifying things together into groups 186) **is/ are** something we do all the time, and it isn't hard to see why. 187) **Imagining/ Imagine** trying to shop in a supermarket 188) **where/ which** the food was arranged in random order on the shelves: tomato soup next to the white bread in one aisle, chicken soup in the back next to the 60-watt light bulbs, one brand of cream cheese in front and another in aisle 8 near the cookies. The task of finding 189) **that/ what** you want would be time-consuming and extremely difficult, if not impossible.

In the case of a supermarket, someone had to design the system of classification. But there is also a ready-made system of classification embodied in our language. The word "dog," for example, groups together a certain class of animals and distinguishes 190) **them/ themselves** from other animals. Such a grouping may seem too obvious to be called a classification, but this is only 191) **because/ because of** you have already mastered the word. As a child learning to speak, you had to work 192) **hard/ hardly** to learn the system of classification your parents were trying to teach you. Before you got the hang of it, you probably made mistakes, 193) **like/ alike** calling the cat a dog. If you hadn't learned to speak, the whole world would seem like the unorganized supermarket; you would be in the position of an infant, 194) **whom/ for whom** every object is new and 195) **familiar/ unfamiliar**. In learning the principles of classification, therefore, we'll be learning about the structure 196) **that/ what** lies at the core of our language.

[43 ~ 45]

In the gym, members of the taekwondo club 197) **was/ were** busy 198) **to practice/ practicing**. Some were trying to kick as high as they could, and some were striking the sparring pad. Anna, the head of the club, 199) **teaching/ was teaching** the new members basic moves. Close by, her friend Jane was assisting Anna. Jane 200) **noticed/ was noticed** 201) **that/ what** Anna was glancing at the entrance door of the gym. She seemed to be 202) **expecting/ expected** someone. At last, when Anna took a break, Jane came over to her and asked, "Hey, are you waiting for Cora?"

Anna 203) **answered/ was answered** the question by nodding uneasily. In fact, Jane knew what her friend was thinking. Cora was a new member, whom Anna had personally invited to join the club. Anna really liked her. 204) **Although/ Despite** her budget was tight, Anna bought Cora a taekwondo uniform. When she 205) **deceived/ received** it, Cora thanked her and promised, "I'll come to practice and work hard every day." However, unexpectedly, she came to practice only once and then never 206) **showing/ showed** up again.

Since Cora had missed several practices, Anna wondered 207) **that/ what** could have happened. Jane, on the other hand, 208) **disappointed/ was disappointed** and said judgingly, "Still waiting for her, huh? I can't believe you don't feel disappointed or angry. Why don't you forget about her?" Anna replied, "Well, I know most newcomers don't keep their commitment to the club, but I thought 209) **that/ what** Cora would be

different. She 210) **said/ was said** she would come every day and practice." Just as Jane was about to respond to her, the door swung open. There she was!

Cora walked in like a wounded soldier with bandages on her face and arms. 211) **Surprising/ Surprised**, Anna and Jane simply looked at her with their eyes wide open. Cora explained, "I'm sorry I've been absent. I got into a bicycle accident, and I was in the hospital for two days. Finally, the doctor 212) **giving/ gave** me the okay to practice." Anna said excitedly, "No problem! We're 213) **thrilling/ thrilled** to have you back!" Then, Jane gave Anna an apologetic look, and she 214) **responded/ was responded** with a friendly pat on Jane's shoulder.

18.

My name is Donna Williams, a science teacher at Rogan High School.

(A) I have been impressed with your ideas about using internet platforms for science classes. Since you are an expert in online education, I would like to ask you to deliver a special lecture at the workshop scheduled for next month.

(B) I am planning a special workshop for our science teachers. We are interested in learning how to teach online science classes.

(C) I am sure the lecture will help our teachers manage successful online science classes, and I hope we can learn from your insights. I am looking forward to hearing from you.

It was Evelyn's first time to explore the Badlands of Alberta, famous across Canada for its numerous dinosaur fossils. As a young amateur bone-hunter, she was overflowing with anticipation.

(A) She had not travelled this far for the bones of common dinosaur species. Her life-long dream to find rare fossils of dinosaurs was about to come true. She began eagerly searching for them.

(B) Looking at the slowly darkening ground before her, she sighed to herself, "I can't believe I came all this way for nothing. What a waste of time!"

(C) After many hours of wandering throughout the deserted lands, however, she was unsuccessful. Now, the sun was beginning to set, and her goal was still far beyond her reach.

20.

One of the most common mistakes made by organizations when they first consider experimenting with social media is that they focus too much on social media tools and platforms and not enough on their business objectives.

(A) In order to serve any purpose at all, a social media presence must either solve a problem for the organization and its customers or result in an improvement of some sort (preferably a measurable one). In all things, purpose drives success. The world of social media is no different.

(B) The reality of success in the social web for businesses is that creating a social media program begins not with insight into the latest social media tools and channels but with a thorough understanding of the organization's own goals and objectives.

(C) A social media program is not merely the fulfillment of a vague need to manage a "presence" on popular social networks because "everyone else is doing it." "Being in social media" serves no purpose in and of itself.

⑤ 사업 목표 설정의 필요성

21.

Scientists have no special purchase on moral or ethical decisions; a climate scientist is no more qualified to comment on health care reform than a physicist is to judge the causes of bee colony collapse.

(A) The very features that create expertise in a specialized domain lead to ignorance in many others. In some cases lay people — farmers, fishermen, patients, native peoples — may have relevant experiences that scientists can learn from.

(B) But without some degree of trust in our designated experts — the men and women who have devoted their lives to sorting out tough questions about the natural world we live in — we are paralyzed, in effect not knowing whether to make ready for the morning commute or not.

(C) Indeed, in recent years, scientists have begun to recognize this: the Arctic Climate Impact Assessment includes observations gathered from local native groups. So our trust needs to be limited, and focused. It needs to be very particular. Blind trust will get us into at least as much trouble as no trust at all.

22.

Environmental hazards include biological, physical, and chemical ones, along with the human behaviors that promote or allow exposure.

(A) Having no choice but to drink water contaminated with very high levels of arsenic, or being forced to passively breathe in tobacco smoke in restaurants, outrages people more than the personal choice of whether an individual smokes tobacco. These factors are important when one considers how change (risk reduction) happens.

(B) Some environmental contaminants are difficult to avoid (the breathing of polluted air, the drinking of chemically contaminated public drinking water, noise in open public spaces); in these circumstances, exposure is largely involuntary.

(C) Reduction or elimination of these factors may require societal action, such as public awareness and public health measures. In many countries, the fact that some environmental hazards are difficult to avoid at the individual level is felt to be more morally egregious than those hazards that can be avoided.

221) 윗글의 알맞은 순서를 배열하시오. [주관식]

23.

Scientists use paradigms rather than believing them. The use of a paradigm in research typically addresses related problems by employing shared concepts, symbolic expressions, experimental and mathematical tools and procedures, and even some of the same theoretical statements.

(A) Indeed, one role of a paradigm is to enable scientists to work successfully without having to provide a detailed account of what they are doing or what they believe about it.

(B) Scientists need only understand how to use these various elements in ways that others would accept. These elements of shared practice thus need not presuppose any comparable unity in scientists' beliefs about what they are doing when they use them.

(C) Thomas Kuhn noted that scientists "can agree in their identification of a paradigm without agreeing on, or even attempting to produce, a full interpretation or rationalization of it. Lack of a standard interpretation or of an agreed reduction to rules will not prevent a paradigm from guiding research."

222) 윗글의 알맞은 순서를 배열하시오. [주관식]

24.

Mending and restoring objects often require even more creativity than original production. The preindustrial blacksmith made things to order for people in his immediate community; customizing the product, modifying or transforming it according to the user, was routine.

(A) "But all repairing must be done by hand. We can make every detail of a watch or of a gun by machinery, but the machine cannot mend it when broken, much less a clock or a pistol!"

(B) Customers would bring things back if something went wrong; repair was thus an extension of fabrication. With industrialization and eventually with mass production, making things became the province of machine tenders with limited knowledge.

(C) But repair continued to require a larger grasp of design and materials, an understanding of the whole and a comprehension of the designer's intentions. "Manufacturers all work by machinery or by vast subdivision of labour and not, so to speak, by hand," an 1896 Manual of Mending and Repairing explained.

⑤ 모든 수리작업은 손으로 해야 한다.

26.

Donato Bramante, born in Fermignano, Italy, began to paint early in his life. His father encouraged him to study painting.

(A) Architecture became his main interest, but he did not give up painting. Bramante moved to Rome in 1499 and participated in Pope Julius II's plan for the renewal of Rome.

(B) He planned the new Basilica of St. Peter in Rome — one of the most ambitious building projects in the history of humankind. Bramante died on April 11, 1514 and was buried in Rome. His buildings influenced other architects for centuries.

(C) Later, he worked as an assistant of Piero della Francesca in Urbino. Around 1480, he built several churches in a new style in Milan. He had a close relationship with Leonardo da Vinci, and they worked together in that city.

225) 윗글의 알맞은 순서를 배열하시오. [주관식]

29.

Like whole individuals, cells have a life span. During their life cycle (cell cycle), cell size, shape, and metabolic activities can change dramatically. A cell is "born" as a twin when its mother cell divides, producing two daughter cells.

(A) Each daughter cell is smaller than the mother cell, and except for unusual cases, each grows until it becomes as large as the mother cell was. During this time, the cell absorbs water, sugars, amino acids, and other nutrients and assembles them into new, living protoplasm.

(B) That cell metabolism and structure should be complex would not be surprising, but actually, they are rather simple and logical. Even the most complex cell has only a small number of parts, each responsible for a distinct, well-defined aspect of cell life.

(C) After the cell has grown to the proper size, its metabolism shifts as it either prepares to divide or matures and differentiates into a specialized cell. Both growth and development require a complex and dynamic set of interactions involving all cell parts.

226) 윗글의 알맞은 순서를 배열하시오. [주관식]

227) 윗글의 주제로 가장 적절한 것을 고르시오.
① amino acids ② logical metabolism
③ life span of cells ④ curing cells
⑤ disease of cells

30.

It has been suggested that "organic" methods, defined as those in which only natural products can be used as inputs, would be less damaging to the biosphere.

(A) Some methods used in "organic" farming, however, such as the sensible use of crop rotations and specific combinations of cropping and livestock enterprises, can make important contributions to the sustainability of rural ecosystems.

(B) Large-scale adoption of "organic" farming methods, however, would reduce yields and increase production costs for many major crops. Inorganic nitrogen supplies are essential for maintaining moderate to high levels of productivity for many of the non-leguminous crop species, because organic supplies of nitrogenous materials often are either limited or more expensive than inorganic nitrogen fertilizers.

(C) In addition, there are constraints to the extensive use of either manure or legumes as "green manure" crops. In many cases, weed control can be very difficult or require much hand labor if chemicals cannot be used, and fewer people are willing to do this work as societies become wealthier.

228) 윗글의 알맞은 순서를 배열하시오. [주관식]

229) 윗글의 주제로 가장 적절한 것을 고르시오.

① 유기농이 비싼 이유 ② 유기농 식품의 섭취

⑤ 유기농이 가진 한계

31.

Humour involves not just practical disengagement but cognitive disengagement. As long as something is funny, we are for the moment not concerned with whether it is real or fictional, true or false.

(A) Indeed, someone listening to a funny story who tries to correct the teller — 'No, he didn't spill the spaghetti on the keyboard and the monitor, just on the keyboard' — will probably be told by the other listeners to stop interrupting.

(B) The creator of humour is putting ideas into people's heads for the pleasure those ideas will bring, not to provide accurate information.

(C) This is why we give considerable leeway to people telling funny stories. If they are getting extra laughs by exaggerating the silliness of a situation or even by making up a few details, we are happy to grant them comic licence, a kind of poetic licence.

230) 윗글의 알맞은 순서를 배열하시오. [주관식]

⑤ 유머가 있는 사람들

32.

News, especially in its televised form, is constituted not only by its choice of topics and stories but by its verbal and visual idioms or modes of address. Presentational styles have been subject to a tension between an informational-educational purpose and the need to engage us entertainingly.

(A) However, they arguably work to reduce understanding by failing to provide the structural contexts for news events.

(B) Indeed, contemporary news construction has come to rely on an increased use of faster editing tempos and 'flashier' presentational styles including the use of logos, sound-bites, rapid visual cuts and the 'star quality' of news readers. Popular formats can be said to enhance understanding by engaging an audience unwilling to endure the longer verbal orientation of older news formats.

(C) While current affairs programmes are often 'serious' in tone sticking to the 'rules' of balance, more popular programmes adopt a friendly, lighter, idiom in which we are invited to consider the impact of particular news items from the perspective of the 'average person in the street'.

232) 윗글의 알맞은 순서를 배열하시오. [주관식]

233) 윗글의 제목으로 가장 적절한 것을 고르시오.

① Verbal Orientation
② What constituting News
③ The Correct News
④ Impact of particular News
⑤ Average Person in the Street

33.

Elinor Ostrom found that there are several factors critical to bringing about stable institutional solutions to the problem of the commons.

(A) Ostrom also emphasizes the importance of democratic decision processes and that all users must be given access to local forums for solving problems and conflicts among themselves. Political institutions at central, regional, and local levels must allow users to devise their own regulations and independently ensure observance.

(B) She pointed out, for instance, that the actors affected by the rules for the use and care of resources must have the right to participate in decisions to change the rules. For that reason, the people who monitor and control the behavior of users should also be users and/or have been given a mandate by all users.

(C) This is a significant insight, as it shows that prospects are poor for a centrally directed solution to the problem of the commons coming from a state power in comparison with a local solution for which users assume personal responsibility.

34.

Precision and determinacy are a necessary requirement for all meaningful scientific debate, and progress in the sciences is, to a large extent, the ongoing process of achieving ever greater precision.

(A) And from this perspective, the development of historical insight may indeed be regarded by the outsider as a process of creating ever more confusion, a continuous questioning of certainty and precision seemingly achieved already, rather than, as in the sciences, an ever greater approximation to the truth.

(B) It therefore aims at the unmasking of previous illusions of determinacy and precision by the production of new and alternative representations, rather than at achieving truth by a careful analysis of what was right and wrong in those previous representations.

(C) But historical representation puts a premium on a proliferation of representations, hence not on the refinement of one representation but on the production of an ever more varied set of representations. Historical insight is not a matter of a continuous "narrowing down" of previous options, not of an approximation of the truth, but, on the contrary, is an "explosion" of possible points of view.

35.

Since their introduction, information systems have substantially changed the way business is conducted. This is particularly true for business in the shape and form of cooperation between firms that involves an integration of value chains across multiple units.

(A) The resulting networks do not only cover the business units of a single firm but typically also include multiple units from different firms.

(B) In order to allow these different units to cooperate successfully, the existence of a common platform is crucial.

(C) As a consequence, firms do not only need to consider their internal organization in order to ensure sustainable business performance; they also need to take into account the entire ecosystem of units surrounding them.

236) 윗글의 알맞은 순서를 배열하시오. [주관식]

237) 윗글의 주제로 가장 적절한 것을 고르시오.

① saving ecosystem
② value chains at network

Many examples of such "green taxes" exist.

According to the market response model, it is increasing prices that drive providers to search for new sources, innovators to substitute, consumers to conserve, and alternatives to emerge. ① Taxing certain goods or services, and so increasing prices, should result in either decreased use of these resources or creative innovation of new sources or options. ② The money raised through the tax can be used directly by the government either to supply services or to search for alternatives. ③ Facing landfill costs, labor expenses, and related costs in the provision of garbage disposal, for example, some cities have required households to dispose of all waste in special trash bags, purchased by consumers themselves, and often costing a dollar or more each. ④ The results have been greatly increased recycling and more careful attention by consumers to packaging and waste. By internalizing the costs of trash to consumers, there has been an observed decrease in the flow of garbage from households. ⑤

239) 윗글의 주제로 가장 적절한 것을 고르시오.

① substitutes of products ② goods or services
③ the costs of trash ④ decreased consumption
⑤ effect of increasing prices

37.

240) 글의 흐름으로 보아 문장의 위치로 적절한 것은?

However, the world the reader encounters in literature is already processed and filtered by another consciousness.

In spite of the likeness between the fictional and real world, the fictional world deviates from the real one in one important respect. ① The existing world faced by the individual is in principle an infinite chaos of events and details before it is organized by a human mind. This chaos only gets processed and modified when perceived by a human mind. ② Because of the inner qualities with which the individual is endowed through heritage and environment, the mind functions as a filter; every outside impression that passes through it is filtered and interpreted. ③ The author has selected the content according to his own worldview and his own conception of relevance, in an attempt to be neutral and objective or convey a subjective view on the world. ④ Whatever the motives, the author's subjective conception of the world stands between the reader and the original, untouched world on which the story is based. ⑤

38.

Introduction of robots into factories, while employment of human workers is being reduced, creates worry and fear. It is the responsibility of management to prevent or, at least, to ease these fears.

(A) Since robots are particularly good at highly repetitive simple motions, the replaced human workers should be moved to positions where judgment and decisions beyond the abilities of robots are required.

(B) For example, robots could be introduced only in new plants rather than replacing humans in existing assembly lines. Workers should be included in the planning for new factories or the introduction of robots into existing plants, so they can participate in the process.

(C) It may be that robots are needed to reduce manufacturing costs so that the company remains competitive, but planning for such cost reductionsshould be done jointly by labor and management. Retraining current employees for new positions within the company will also greatly reduce their fear of being laid off.

241) 윗글의 알맞은 순서를 배열하시오. [주관식]

242) 윗글의 주제로 가장 적절한 것을 고르시오.

① the labor union ② the abilities of robots
③ the future robots ④ repetitive motions
⑤ responsibility of management

39.

Cinema is valuable not for its ability to make visible the hidden outlines of our reality, but for its ability to reveal what reality itself veils — the dimension of fantasy.

(A) And what's worse, they could do nothing but turn filmmakers and audiences away from the fantasmatic dimension of cinema, potentially transforming film into a mere delivery device for representations of reality. As long as the irrealism of the silent black and white film predominated, one could not take filmic fantasies for representations of reality.

(B) This is why, to a person, the first great theorists of film decried the introduction of sound and other technical innovations (such as color) that pushed film in the direction of realism. Since cinema was an entirely fantasmatic art, these innovations were completely unnecessary.

(C) But sound and color threatened to create just such an illusion, thereby destroying the very essence of film art. As Rudolf Arnheim puts it, "The creative power of the artist can only come into play where reality and the medium of representation do not coincide."

40.

Philip Kitcher and Wesley Salmon have suggested that there are two possible alternatives among philosophical theories of explanation. One is the view that scientific explanation consists in the unification of broad bodies of phenomena under a minimal number of generalizations.

(A) The other view is the causal/mechanical approach. According to it, a scientific explanation of a phenomenon consists of uncovering the mechanisms that produced the phenomenon of interest.

(B) This view sees the explanation of individual events as primary, with the explanation of generalizations flowing from them. That is, the explanation of scientific generalizations comes from the causal mechanisms that produce the regularities.

(C) According to this view, the (or perhaps, a) goal of science is to construct an economical framework of laws or generalizations that are capable of subsuming all observable phenomena. Scientific explanations organize and systematize our knowledge of the empirical world; the more economical the systematization, the deeper our understanding of what is explained.

244) 주어진 글 다음에 이어질 순서로 적절한 것은?

① (A) - (C) - (B) ② (B) - (A) - (C) ③ (B) - (C) - (A)

[41 ~ 42]

Classifying things together into groups is something we do all the time, and it isn't hard to see why. Imagine trying to shop in a supermarket where the food was arranged in random order on the shelves: tomato soup next to the white bread in one aisle, chicken soup in the back next to the 60-watt light bulbs, one brand of cream cheese in front and another in aisle 8 near the cookies. The task of finding what you want would be time-consuming and extremely difficult, if not impossible.

(A) Such a grouping may seem too obvious to be called a classification, but this is only because you have already mastered the word. As a child learning to speak, you had to work hard to learn the system of classification your parents were trying to teach you. Before you got the hang of it, you probably made mistakes, like calling the cat a dog.

(B) In the case of a supermarket, someone had to design the system of classification. But there is also a ready-made system of classification embodied in our language. The word "dog," for example, groups together a certain class of animals and distinguishes them from other animals.

(C) If you hadn't learned to speak, the whole world would seem like the unorganized supermarket; you would be in the position of an infant, for whom every object is new and unfamiliar. In learning the principles of classification, therefore, we'll be learning about the structure that lies at the core of our language.

245) 주어진 글 다음에 이어질 순서로 적절한 것은?

[43 ~ 45]

In the gym, members of the taekwondo club were busy practicing. Some were trying to kick as high as they could, and some were striking the sparring pad. Anna, the head of the club, was teaching the new members basic moves. Close by, her friend Jane was assisting Anna. Jane noticed that Anna was glancing at the entrance door of the gym. She seemed to be expecting someone. At last, when Anna took a break, Jane came over to her and asked, "Hey, are you waiting for Cora?"

(A) Since Cora had missed several practices, Anna wondered what could have happened. Jane, on the other hand, was disappointed and said judgingly, "Still waiting for her, huh? I can't believe you don't feel disappointed or angry. Why don't you forget about her?" Anna replied, "Well, I know most newcomers don't keep their commitment to the club, but I thought that Cora would be different. She said she would come every day and practice." Just as Jane was about to respond to her, the door swung open. There she was!

(B) Cora walked in like a wounded soldier with bandages on her face and arms. Surprised, Anna and Jane simply looked at her with their eyes wide open. Cora explained, "I'm sorry I've been absent. I got into a bicycle accident, and I was in the hospital for two days. Finally, the doctor gave me the okay to practice." Anna said excitedly, "No problem! We're thrilled to have you back!" Then, Jane gave Anna an apologetic look, and she responded with a friendly pat on Jane's shoulder.

(C) Anna answered the question by nodding uneasily. In fact, Jane knew what her friend was thinking. Cora was a new member, whom Anna had personally invited to join the club. Anna really liked her. Although her budget was tight, Anna bought Cora a taekwondo uniform. When she received it, Cora thanked her and promised, "I'll come to practice and work hard every day." However, unexpectedly, she came to practice only once and then never showed up again.

Mending and restoring objects often require even more creativity than original production. The preindustrial blacksmith ① **made** things to order for people in his immediate community; customizing the product, modifying or transforming it according to the user, was routine. Customers ② **would bring** things back if something went wrong; repair was thus an extension of fabrication. With industrialization and eventually with mass production, making things ③ **becoming** the province of machine tenders with limited knowledge. (A) _____ repair continued to require a larger grasp of design and materials, an understanding of the whole and a comprehension of the designer's intentions. "Manufacturers all work by machinery or by vast subdivision of labour and not, ④ **so to speak**, by hand," an 1896 Manual of Mending and Repairing explained. (B) "_____ all repairing must be done by hand. We can make every detail of a watch or of a gun by machinery, but the machine ⑤ **cannot mend** it when broken, much less a clock or a pistol!"

260) (A) (B) 빈칸에 어울리는 연결어를 고르시오.

Like whole individuals, cells have a life span. ① **While** their life cycle (cell cycle), cell size, shape, and metabolic activities can change ② **dramatically**. A cell is "born" as a twin when its mother cell divides, producing two daughter cells. Each daughter cell is smaller than the mother cell, and **except for unusual cases, each growing until it becomes as large as the mother cell was**. During this time, the cell absorbs water, sugars, amino acids, and other nutrients and assembles them into new, living protoplasm. After the cell has grown to the proper size, its metabolism shifts as it either prepares ③ **to divide** or matures and differentiates into a specialized cell. Both growth and development ④ **require** a complex and dynamic set of interactions involving all cell parts. That cell metabolism and structure should be complex would not be ⑤ **surprising**, but actually, they are rather simple and logical. Even the most complex cell has only a small number of parts, each responsible for a distinct, well-defined aspect of cell life.

Elinor Ostrom found that there are several factors critical to bringing about _____ institutional solutions to the problem of the commons. She pointed out, for instance, ① **that** the actors affected by the rules for the use and care of resources must have the right ② **to participate** in decisions to change the rules. For that reason, the people who monitor and control the behavior of users should also be users and/or ③ **have been given** a mandate by all users. This is a significant insight, as it shows that prospects are poor for a centrally directed solution to the problem of the commons coming from a state power in comparison with a local solution for which users ④ **assuming** personal responsibility. Ostrom also emphasizes the importance of democratic decision processes and that all users must be given access to local forums for solving problems and conflicts ⑤ **among themselves**. Political institutions at central, regional, and local levels must allow users to devise their own regulations and independently ensure observance.

Classifying things together into groups is something we do all the time, and it isn't hard to see why. ① **Imagine** trying to shop in a supermarket where the food was arranged in random order on the shelves: tomato soup next to the white bread in one aisle, chicken soup in the back next to the 60-watt light bulbs, one brand of cream cheese in front and another in aisle 8 near the cookies. The task of finding ② **that** you want would be time-consuming and extremely difficult, if not impossible.

In the case of a supermarket, someone had to design the system of classification. (A) _____ there is also a ready-made system of classification embodied in our language. The word "dog," for example, groups together a certain class of animals and ③ **distinguishes** them from other animals. Such a grouping may seem too obvious to be called a classification, but this is only because you ④ **have already mastered** the word. As a child learning to speak, you had to work hard to learn the system of classification your parents were trying to teach you. Before you got the hang of it, you probably made mistakes, like calling the cat a dog. If you hadn't learned to speak, the whole world ⑤ **would seem** like the unorganized supermarket; you would be in the position of an infant, for whom every object is new and unfamiliar. In learning the principles of classification, (B) _____, we'll be learning about the structure that lies at the core of our language.

In the gym, members of the taekwondo club were busy practicing. Some were trying to kick as high as they could, and some were striking the sparring pad. Anna, the head of the club, ① **was teaching** the new members basic moves. Close by, her friend Jane was assisting Anna. Jane noticed that Anna was glancing at the entrance door of the gym. She seemed to be expecting someone. At last, when Anna took a break, Jane came over to her and asked, "Hey, are you waiting for Cora?"

Anna answered the question by nodding uneasily. In fact, Jane knew what her friend ② **was thinking**. Cora was a new member, whom Anna had personally invited to join the club. Anna really liked her. ③ **Despite** her budget was tight, Anna bought Cora a taekwondo uniform. When she received it, Cora thanked her and promised, "I'll come to practice and work hard every day." However, unexpectedly, she came to practice only once and then never showed up again.

Since Cora had missed several practices, Anna wondered what could have happened. Jane, on the other hand, was disappointed and said judgingly, "Still waiting for her, huh? I can't believe you don't feel ④ **disappointed** or angry. Why don't you forget about her?" Anna replied, "Well, I know most newcomers don't keep their commitment to the club, but I thought that Cora would be different. She said she would come every day and practice." Just as Jane was about to respond to her, the door ⑤ **swung open**. There she was!

Cora walked in like a wounded soldier with bandages on her face and arms. **Surprise, Anna and Jane simply looked at her with their eyes wide open**. Cora explained, "I'm sorry I've been absent. I got into a bicycle accident, and I was in the hospital for two days. Finally, the doctor gave me the okay to practice." Anna said excitedly, "No problem! We're thrilled to have you back!" Then, Jane gave Anna an apologetic look, and she responded with a friendly pat on Jane's shoulder.

Humour involves not just practical disengagement but cognitive disengagement. As long as something is funny, we are for the moment not concerned with whether it is real or fictional, true or false. This is ① **why** we give considerable leeway to people telling funny stories. If they ② **are getting** extra laughs by exaggerating the silliness of a situation or even by making up a few details, we are happy ③ **to grant** them comic licence, a kind of poetic licence. Indeed, someone listening to a funny story who tries ④ **to correct** the teller — 'No, he didn't spill the spaghetti on the keyboard and the monitor, just on the keyboard' — will probably be told by the other listeners to _____. The creator of humour ⑤ **putting** ideas into people's heads for the pleasure those ideas will bring, not to provide accurate information.

319) 윗글의 빈칸에 가장 적절한 답을 고르시오.

① tell the secret ② stop interrupting
③ make it worse ④ prove the case
⑤ trigger sympathy

Precision and _____ are a necessary requirement for all meaningful scientific debate, and progress in the sciences is, to a large extent, the ongoing process of achieving ever greater precision. But historical representation ① **puts** a premium on a proliferation of representations, hence not on the refinement of one representation but on the production of an ever more varied set of representations. Historical insight is not a matter of a continuous "narrowing down" of previous options, not of an approximation of the truth, but, on the contrary, is an "explosion" of possible points of view. It therefore ② **aims** at the unmasking of previous illusions of determinacy and precision by the production of new and alternative representations, rather than at achieving truth by a careful analysis of ③ **what** was right and wrong in those previous representations. And from this perspective, the development of historical insight may indeed be ④ **regarding** by the outsider as a process of creating ever more confusion, a continuous questioning of certainty and precision seemingly achieved already, rather than, ⑤ **as** in the sciences, an ever greater approximation to the truth.

325) 윗글의 빈칸에 가장 적절한 답을 고르시오.

① replacement ② terror ③ determinacy
④ humidity ⑤ culture

35.

In spite of the likeness between the fictional and real world, the fictional world ① **deviates** from the real one in one important respect. The existing world faced by the individual is in principle an infinite chaos of events and details before it is organized by a human mind. **This chaos only gets processed and modified when perceiving by a human mind**. Because of the inner qualities with which the individual ② **is endowed** through heritage and environment, the mind functions as a filter; every outside impression that passes through it is filtered and interpreted. However, the world the reader encounters in literature is already ③ **processed and filtered** by another consciousness. The author has selected the content according to his own worldview and his own conception of relevance, in an attempt ④ **to be** neutral and objective or convey a subjective view on the world. Whatever the motives, the author's subjective conception of the world stands between the reader and the original, untouched world ⑤ **which** the story is based.

Introduction of robots into factories, while employment of human workers are being reduced, creates worry and fear. It is the responsibility of management to prevent or, at least, ① **to ease** these fears. For example, robots could be introduced only in new plants rather than replacing humans in existing assembly lines. Workers should be included in the planning for new factories or the introduction of robots into existing plants, so they ② **can participate** in the process. It may be that robots are needed to reduce manufacturing costs ③ **so that** the company remains competitive, but planning for such cost reductionsshould be done ④ **jointly** by labor and management. Retraining current employees for new positions within the company will also greatly reduce their fear of being laid off. Since robots are particularly good at highly repetitive simple motions, the replaced human workers should be moved to positions ⑤ **which** judgment and decisions beyond the abilities of robots are required.

Cinema is valuable not for its ability to make _____ the hidden outlines of our reality, but for its ability to reveal what reality itself veils — the dimension of fantasy. This is why, to a person, the first great theorists of film decried the introduction of sound and other technical innovations (such as color) that pushed film in the direction of realism. Since cinema was an ① **entirely** fantasmatic art, these innovations were completely unnecessary. And what's worse, they could do nothing but turn filmmakers and audiences away from the fantasmatic dimension of cinema, ② **potentially** transforming film into a mere delivery device for representations of reality. As long as the irrealism of the silent black and white film ③ **predominated**, one could not take filmic fantasies for representations of reality. But sound and color ④ **threatening** to create just such an illusion, thereby destroying the very essence of film art. As Rudolf Arnheim puts it, "The creative power of the artist can only come into play ⑤ **where** reality and the medium of representation do not coincide."

Philip Kitcher and Wesley Salmon have suggested ① **what** there are two possible alternatives among philosophical theories of explanation. One is the view ② **that** scientific explanation consists in the unification of broad bodies of phenomena under a minimal number of generalizations. According to this view, the (or perhaps, a) goal of science is to construct an economical framework of laws or generalizations that are capable of subsuming all _____ phenomena. Scientific explanations organize and systematize our knowledge of the empirical world; the more economical the systematization, ③ **the deeper** our understanding of what is explained. The other view is the causal/mechanical approach. According to it, a scientific explanation of a phenomenon ④ **consists of** uncovering the mechanisms that produced the phenomenon of interest. This view ⑤ **sees** the explanation of individual events as primary, with the explanation of generalizations flowing from them. That is, the explanation of scientific generalizations comes from the causal mechanisms that produce the regularities.

337) 윗글의 빈칸에 가장 적절한 답을 고르시오.

① unhealthy ② innumerable ③ indicative
④ observable ⑤ ultimate

338) 다음, 어법상 틀린 것을 찾아 고치시오. [주관식]

_____ is something we do all the time, and it isn't hard to see why. Imagine trying ① **to shop** in a supermarket where the food was arranged in random order on the shelves: tomato soup next to the white bread in one aisle, chicken soup in the back next to the 60-watt light bulbs, one brand of cream cheese in front and another in aisle 8 near the cookies. The task of finding what you want would be time-consuming and extremely difficult, if not impossible.

In the case of a supermarket, someone ② **had to design** the system of classification. But there is also a ready-made system of classification embodied in our language. The word "dog," for example, groups together a certain class of animals and ③ **distinguishing** them from other animals. Such a grouping may seem too obvious to be called a classification, but this is only because you have already mastered the word. As a child learning to speak, you had to work hard ④ **to learn** the system of classification your parents were trying ⑤ **to teach** you. Before you got the hang of it, you probably made mistakes, like calling the cat a dog. If you hadn't learned to speak, the whole world would seem like the unorganized supermarket; you would be in the position of an infant, for whom every object is new and unfamiliar. In learning the principles of classification, therefore, we'll be learning about the structure that lies at the core of our language.

339) 윗글의 빈칸에 가장 적절한 답을 고르시오.

① Making time-consuming effort
② Mastering the words
③ Going to the new and unfamiliar place
④ Forgetting the classification you made
⑤ Classifying things together into groups

In the gym, members of the taekwondo club were busy practicing. Some were trying to kick as high as they could, and some ① **were striking** the sparring pad. Anna, the head of the club, was teaching the new members basic moves. Close by, her friend Jane was assisting Anna. Jane noticed that Anna was glancing at the entrance door of the gym. She seemed to be expecting someone. At last, when Anna took a break, Jane came over to her and asked, "Hey, are you waiting for Cora?"

Anna answered the question by nodding uneasily. In fact, Jane knew ② **that** her friend was thinking. Cora was a new member, whom Anna had personally invited to join the club. Anna really liked her. Although her budget was tight, Anna bought Cora a taekwondo uniform. When she received it, Cora thanked her and promised, "I'll come to practice and work hard every day." However, unexpectedly, she came to practice only once and then never ③ **showed** up again.

Since Cora had missed several practices, Anna wondered what ④ **could have happened**. Jane, on the other hand, was disappointed and said judgingly, "Still waiting for her, huh? I can't believe you don't feel disappointed or angry. Why don't you forget about her?" Anna replied, "Well, I know most newcomers don't keep their commitment to the club, but I thought that Cora would be different. She said she would come every day and practice." Just as Jane ⑤ **was about to respond** to her, the door swung open. There she was!

Cora walked in like a wounded soldier with bandages on her face and arms. Surprised, Anna and Jane simply looked at her **wide / eyes / open / their / with**. Cora explained, "I'm sorry I've been absent. I got into a bicycle accident, and I was in the hospital for two days. Finally, the doctor gave me the okay to practice." Anna said excitedly, "No problem! We're thrilled to have you back!" Then, Jane gave Anna an apologetic look, and she responded with a friendly pat on Jane's shoulder.

According to the market response model, it is increasing prices ① **that** drive providers to search for new sources, innovators to substitute, consumers to conserve, and alternatives to emerge. Taxing certain goods or services, and so increasing prices, should result (A) _____ either decreased use of these resources or creative innovation of new sources or options. The money ② **risen** through the tax can be used directly by the government either to supply services or to search for alternatives. Many examples of such "green taxes" exist. Facing landfill costs, labor expenses, and ③ **related** costs in the provision of garbage disposal, for example, some cities have required households to dispose (B) _____ all waste in special trash bags, purchased by consumers themselves, and often costing a dollar or more each. The results have been ④ **greatly** increased recycling and more careful attention by consumers to packaging and waste. ⑤ **By internalizing** the costs of trash to consumers, there has been an observed decrease in the flow of garbage from households.

373) 각 빈칸 (A), (B) 에 알맞은 어휘를 채우시오.

378) 각 밑줄 (A), (B), (C) 에서 올바른 것을 고르시오.

Cinema is valuable not for its ability to make visible the hidden outlines of our reality, but for its ability to reveal (A) **that/ what** reality itself veils — the dimension of fantasy. This is why, to a person, the first great theorists of film decried the introduction of sound and other technical innovations (such as color) that pushed film in the direction of realism. Since cinema was an entirely fantasmatic art, these innovations were completely unnecessary. And what's worse, they could do nothing but turn filmmakers and audiences away from the fantasmatic dimension of cinema, potentially transforming film into a mere delivery device for representations of reality. As long as the irrealism of the silent black and white film predominated, one could not (B) **take/ be taken** filmic fantasies for representations of reality. But sound and color threatened to create just such an _____, thereby destroying the very essence of film art. As Rudolf Arnheim puts it, "The creative power of the artist can only come into play (C) **where/ which** reality and the medium of representation do not coincide."

379) 윗글의 빈칸에 가장 적절한 답을 고르시오.

① intuition ② immortality ③ illusion
④ relation ⑤ obesity

40.

380) 각 밑줄 (A), (B), (C) 에서 올바른 것을 고르시오.

Philip Kitcher and Wesley Salmon (A) **have been suggested/ have suggested** that there are two possible alternatives among philosophical theories of explanation. One is the view that scientific explanation consists in the unification of broad bodies of phenomena under a minimal number of generalizations. According to this view, the (or perhaps, a) goal of science is to (B) **construct/ be constructed** an economical framework of laws or generalizations that are capable of subsuming all observable phenomena. Scientific explanations organize and systematize our knowledge of the empirical world; the more economical the systematization, the deeper our understanding of what is explained. The other view is the causal/mechanical approach. According to it, a scientific explanation of a phenomenon (C) **consists/ is consisted** of uncovering the mechanisms that produced the phenomenon of interest. This view sees the explanation of individual events as primary, with the explanation of generalizations flowing from them. _____, the explanation of scientific generalizations comes from the causal mechanisms that produce the regularities.

381) 윗글 빈칸에 들어갈 연결어로 가장 적절한 것은?

① Similarly ② By contrast ③ Thus
④ That is ⑤ Otherwise

[41 ~ 42]

382) 각 밑줄 (A), (B), (C) 에서 올바른 것을 고르시오.

Classifying things together into groups are something we do all the time, and it isn't hard to see why. Imagine trying to shop in a supermarket (A) **where/ which** the food was arranged in random order on the shelves: tomato soup next to the white bread in one aisle, chicken soup in the back next to the 60-watt light bulbs, one brand of cream cheese in front and another in aisle 8 near the cookies. The task of finding what you want would be time-consuming and extremely difficult, if not impossible.

In the case of a supermarket, someone had to design the system of classification. But there is also a ready-made system of classification embodied in our language. The word "dog," for example, groups together a certain class of animals and distinguishes them from other animals. Such a grouping may seem too obvious to be called a classification, but this is only (B) **because/ because of** you have already mastered the word. As a child learning to speak, you had to work hard to learn the system of classification your parents were trying to teach you. Before you got the hang of it, you probably made mistakes, like calling the cat a dog. If you hadn't learned to speak, the whole world would seem like the unorganized supermarket; you would be in the position of an infant, for whom every object is new and unfamiliar. In learning the principles of classification, therefore, we'll be learning about the structure that (C) **lies/ lays** at the core of our language.

383) 위 밑줄에서 어법상 어긋난 부분을 찾아 고치시오.

[43 ~ 45]

384) 다음 밑줄에서 어법상 어긋난 것을 **모두** 고르시오.

In the gym, members of the taekwondo club ① **was** busy practicing. Some were trying to kick as high as they could, and some were striking the sparring pad. Anna, the head of the club, was teaching the new members basic moves. Close by, her friend Jane was assisting Anna. Jane noticed that Anna was glancing at the entrance door of the gym. She seemed to be expecting someone. At last, when Anna took a break, Jane came over to her and asked, "Hey, are you waiting for Cora?"

Anna answered the question by nodding uneasily. (A) _____, Jane knew what her friend was thinking. Cora was a new member, whom Anna ② **had personally invited** to join the club. Anna really liked her. Although her budget was tight, Anna bought Cora a taekwondo uniform. When she received it, Cora thanked her and promised, "I'll come to practice and work hard every day." (B) _____, unexpectedly, she came to practice only once and then never showed up again.

Since Cora ③ **had been missed** several practices, Anna wondered what could have happened. Jane, on the other hand, was disappointed and said judgingly, "Still waiting for her, huh? I can't believe you don't feel disappointed or angry. Why don't you forget about her?" Anna replied, "Well, I know most newcomers don't keep their commitment to the club, but I thought ④ **that** Cora would be different. She said she would come every day and practice." Just as Jane was about to respond to her, the door swung open. There she was!

Cora walked in like a wounded soldier with bandages on her face and arms. Surprised, Anna and Jane simply looked at her with their eyes wide open. Cora explained, "I'm sorry I've been absent. I got into a bicycle accident, and I was in the hospital for two days. (C) _____, the doctor gave me the okay to practice." Anna said excitedly, "No problem! We're ⑤ **thrilled** to have you back!" Then, Jane gave Anna an apologetic look, and she responded with a friendly pat on Jane's shoulder.

It was Evelyn's first time to explore the Badlands of Alberta, famous across Canada for its numerous dinosaur fossils. ① As a young amateur bone-hunter, she was overflowing with anticipation. She had not (A) **troubled/ travelled** this far for the bones of common dinosaur species. ② Her life-long dream to find rare fossils of dinosaurs was about to come true. She began eagerly searching for them. ③ Now, the sun was beginning to (B) **rise/ set**, and her goal was still far beyond her reach. ④ Looking at the slowly darkening ground before her, she sighed to herself, "I can't (C) **believe/ relieve** I came all this way for nothing. What a waste of time!" ⑤

389) 글의 흐름으로 보아 문장의 위치로 적절한 것은?

After many hours of wandering throughout the deserted lands, however, she was unsuccessful.

20.

390) 각 밑줄 (A), (B), (C) 에서 올바른 것을 고르시오.

One of the most common mistakes made by organizations when they first consider experimenting with social media is that they focus too much on social media tools and platforms and not enough on their business objectives. The reality of success in the social web for businesses is that (A) **creating/ crediting** a social media program begins not with insight into the latest social media tools and channels but with a thorough understanding of the organization's own goals and objectives. A social media program is not merely the fulfillment of a vague need to manage a "presence" on popular social networks because "everyone else is doing it." "Being in social media" serves no purpose in and of itself. In order to (B) **serve/ reserve** any purpose at all, a social media presence must either solve a problem for the organization and its customers or result (C) **in/ from** an improvement of some sort (preferably a measurable one). In all things, purpose drives success. The world of social media is no different.

21.

391) 각 밑줄 (A), (B), (C) 에서 올바른 것을 고르시오.

Scientists have no special purchase on moral or ethical decisions; a climate scientist is no more qualified to comment on health care reform than a physicist is to (A) **judge/ miss** the causes of bee colony collapse. The very features that create expertise in a specialized domain lead to ignorance in many others. In some cases lay people — farmers, fishermen, patients, (B) **naive/ native** peoples — may have relevant experiences that scientists can learn from. Indeed, in recent years, scientists have begun to recognize this: the Arctic Climate Impact Assessment (C) **includes/ concludes** observations gathered from local native groups. So our trust needs to be limited, and focused. It needs to be very particular. Blind trust will get us into at least as much trouble as no trust at all. But without some degree of trust in our designated experts — the men and women who have devoted their lives to sorting out tough questions about the natural world we live in — we are _____, in effect not knowing whether to make ready for the morning commute or not.

393) 각 밑줄 (A), (B), (C) 에서 올바른 것을 고르시오.

Environmental hazards include biological, physical, and chemical ones, along with the human behaviors that (A) **promote/ prevent** or allow exposure. Some environmental contaminants are difficult to avoid (the breathing of polluted air, the drinking of chemically _____ public drinking water, noise in open public spaces); in these circumstances, exposure is largely involuntary. Reduction or elimination of these factors may require societal action, such as public awareness and public health measures. In many countries, the fact that some environmental hazards are difficult to (B) **accept/ avoid** at the individual level is felt to be more morally egregious than those hazards that can be avoided. Having no choice but to drink water _____ with very high levels of arsenic, or being forced to passively (C) **breath/ breathe** in tobacco smoke in restaurants, outrages people more than the personal choice of whether an individual smokes tobacco. These factors are important when one considers how change (risk reduction) happens.

394) 윗글의 빈칸에 공통으로 들어갈 한 단어를 쓰시오.

과학자들은 패러다임을 믿기보다는 그것을 사용한다.
The use of a paradigm in research typically addresses related problems by employing shared concepts, symbolic expressions, experimental and mathematical tools and procedures, and even some of the same theoretical statements. Scientists need only understand how to use these various elements in ways that others would accept. These elements of shared practice thus need not presuppose any comparable unity in scientists' beliefs about what they are doing when they use them. Indeed, one role of a paradigm is to enable scientists to work successfully without having to (A) **provide/ prevent** a detailed account of what they are doing or what they believe about it. Thomas Kuhn noted that scientists "can agree in their identification of a paradigm without agreeing on, or even attempting to produce, a full interpretation or rationalization of it. (B) **Abundance/ Lack** of a standard interpretation or of an agreed reduction to rules will not prevent a paradigm (C) **with/ from** guiding research."

396) 윗글 주어진 문장을 문맥에 맞게 배열하시오.

Scientists / paradigms / believing / rather than / them / use

24.

397) 각 밑줄 (A), (B), (C) 에서 올바른 것을 고르시오.

Mending and restoring objects often require even more _____ than original production. The preindustrial blacksmith made things to order for people in his immediate community; customizing the product, modifying or transforming it according to the user, was routine. Customers would bring things back if something went wrong; repair was thus an extension of (A) **fake/ fabrication**. With industrialization and eventually with mass production, making things became the province of machine tenders with limited knowledge. But repair continued to require a larger grasp of design and materials, an understanding of the whole and a comprehension of the designer's intentions. "Manufacturers all work by machinery or by vast subdivision of labour and not, so to speak, by (B) **machine/ hand**," an 1896 Manual of Mending and Repairing explained. "But all repairing must be done by hand. We can make every detail of a watch or of a gun by machinery, but the machine cannot (C) **make/ mend** it when broken, much less a clock or a pistol!"

Donato Bramante, born in Fermignano, Italy, began to paint early in his life. **encouraged / His father / to study / him / painting**. Later, he worked as an assistant of Piero della Francesca in Urbino. Around 1480, he built (A) **severe/ several** churches in a new style in Milan. He had a close relationship with Leonardo da Vinci, and they worked together in that city. Architecture became his main interest, but he did not give up painting. Bramante moved to Rome in 1499 and (B) **prevented/ participated** in Pope Julius II's plan for the renewal of Rome. He planned the new Basilica of St. Peter in Rome — one of the most ambitious building projects in the history of humankind. Bramante died on April 11, 1514 and was buried in Rome. His buildings (C) **inserted/ influenced** other architects for centuries.

401) 각 밑줄 (A), (B), (C) 에서 올바른 것을 고르시오.

Like whole individuals, cells have a life span. During their life cycle (cell cycle), cell size, shape, and metabolic activities can change dramatically. A cell is "born" as a twin when its mother cell (A) **divides/ derives**, producing two daughter cells. Each daughter cell is smaller than the mother cell, and except for unusual cases, each grows until **the mother cell / large / becomes / as / as / it / was**. During this time, the cell absorbs water, sugars, amino acids, and other nutrients and assembles them into new, living protoplasm. After the cell has grown to the proper size, its metabolism shifts as it either (B) **prepares/ repairs** to divide or matures and differentiates into a specialized cell. Both growth and development require a complex and dynamic set of interactions involving all cell parts. That cell metabolism and structure should be complex would not be surprising, but actually, they are rather simple and (C) **logical/ illogical**. Even the most complex cell has only a small number of parts, each responsible for a distinct, well-defined aspect of cell life.

402) 윗글 주어진 문장을 문맥에 맞게 배열하시오.

403) 각 밑줄 (A), (B), (C) 에서 올바른 것을 고르시오.

It has been suggested that "organic" methods, (A) **defined/ refined** as those in which only natural products can be used as inputs, would be less damaging to the biosphere. Large-scale adoption of "organic" farming methods, however, would reduce yields and increase production costs for many major crops. Inorganic nitrogen supplies are essential for maintaining moderate to high levels of productivity for many of the non-leguminous crop species, because organic supplies of nitrogenous materials often are either limited or (B) **more/ less** expensive than inorganic nitrogen fertilizers. In addition, there are constraints to the extensive use of either manure or legumes as "green manure" crops. In many cases, weed control can be very difficult or require much hand labor if chemicals cannot be used, and fewer people are (C) **willing/ reluctant** to do this work as societies become wealthier. Some methods used in "organic" farming, however, such as the _____ use of crop rotations and specific combinations of cropping and livestock enterprises, can make important contributions to the sustainability of rural ecosystems.

④ sensual ⑤ sensory

31.
405) 각 밑줄 (A), (B), (C) 에서 올바른 것을 고르시오.

Humour involves not just practical disengagement but cognitive disengagement. ① As long as something is (A) **sad/ funny**, we are for the moment not concerned with whether it is real or fictional, true or false. ② This is why we give (B) **considerate/ considerable** leeway to people telling funny stories. ③ If they are getting extra laughs by exaggerating the silliness of a situation or even by making up a few details, we are happy to grant them comic licence, a kind of poetic licence. ④ The creator of humour is putting ideas into people's heads for the pleasure those ideas will bring, not to (C) **provide/ prevent** accurate information. ⑤

406) 글의 흐름으로 보아 문장의 위치로 적절한 것은?

Indeed, someone listening to a funny story who tries to correct the teller will probably be told by the other listeners to stop interrupting.

32.
407) 각 밑줄 (A), (B), (C) 에서 올바른 것을 고르시오.

News, especially in its televised form, is (A) **confused/ constituted** not only by its choice of topics and stories but by its verbal and visual idioms or modes of address. ① Presentational styles have been subject to a tension between an informational-educational purpose and the need to engage us entertainingly. ② While current affairs programmes are often 'serious' in tone sticking to the 'rules' of balance, more popular programmes adopt a friendly, lighter, idiom in which we are invited to consider the impact of particular news items from the perspective of the 'average person in the street'. ③ Indeed, contemporary news construction has come to rely on an increased use of (B) **slower/ faster** editing tempos and 'flashier' presentational styles including the use of logos, sound-bites, rapid visual cuts and the 'star quality' of news readers. ④ Popular formats can be said to enhance understanding by engaging an audience (C) **willing/ unwilling** to endure the longer verbal orientation of older news formats. ⑤

408) 글의 흐름으로 보아 문장의 위치로 적절한 것은?

However, they arguably work to reduce understanding by failing to provide the structural contexts for news events.

33.

409) 각 밑줄 (A), (B), (C) 에서 올바른 것을 고르시오.

Elinor Ostrom found that there are several factors critical to bringing about stable institutional solutions to the problem of the commons. ① She pointed out, for instance, that the actors (A) **affected/ effected** by the rules for the use and care of resources must have the right to participate in decisions to change the rules. ② This is a significant insight, as it shows that prospects are poor for a centrally directed solution to the problem of the commons coming from a state power in comparison with a local solution for which users assume personal responsibility. ③ Ostrom also emphasizes the importance of democratic decision processes and that all users must be given (B) **access/ assess** to local forums for solving problems and conflicts among themselves. ④ Political institutions at central, regional, and local levels must allow users to devise their own regulations and independently ensure (C) **observation/ observance**. ⑤

410) 글의 흐름으로 보아 문장의 위치로 적절한 것은?

For that reason, the people who monitor and control the behavior of users should also be users and/or have been given a mandate by all users.

34.

411) 각 밑줄 (A), (B), (C) 에서 올바른 것을 고르시오.

Precision and determinacy are a necessary requirement for all meaningful scientific debate, and progress in the sciences is, to a large extent, the ongoing process of achieving ever greater precision. But historical representation puts a (A) **premium/ prevention** on a proliferation of representations, hence not on the refinement of one representation but on the production of an ever more varied set of representations. Historical insight is not a matter of a continuous "narrowing down" of previous options, not of an approximation of the truth, but, _____, is an "explosion" of possible points of view. It therefore aims at the (B) **forgetting/ unmasking** of previous illusions of determinacy and precision by the production of new and alternative representations, rather than at achieving truth by a careful analysis of what was right and wrong in those previous representations. And from this perspective, the development of historical insight may indeed be (C) **regarded/ disregarded** by the outsider as a process of creating ever more confusion, a continuous questioning of certainty and precision seemingly achieved already, rather than, as in the sciences, an ever greater approximation to the truth.

Classifying things together into groups is something we do all the time, and it isn't hard to see why. Imagine trying to shop in a supermarket where the food was arranged in random order on the shelves: tomato soup next to the white bread in one aisle, chicken soup in the back next to the 60-watt light bulbs, one brand of cream cheese in front and another in aisle 8 near the cookies. **of finding / The task / you / what / want** would be time-consuming and extremely difficult, if not impossible.

In the case of a supermarket, someone had to design the system of classification. But there is also a ready-made system of classification embodied in our language. The word "dog," for example, groups together a certain class of animals and distinguishes (A) **them/ themselves** from other animals. Such a grouping may seem too obvious to be called a classification, but this is only because you have already mastered the word. As a child learning to speak, you had to work hard to learn the system of classification your parents were trying to teach you. Before you got the hang of it, you probably made mistakes, like calling the cat a dog. If you hadn't learned to speak, the whole world would seem (B) **like/ alike** the unorganized supermarket; you would be in the position of an infant, for whom every object is new and unfamiliar. In learning the principles of classification, therefore, we'll be learning about the structure (C) **that/ what** lies at the core of our language.

425) 윗글 주어진 문장을 문맥에 맞게 배열하시오.

[43 ~ 45]

426) 각 밑줄 (A), (B), (C) 에서 올바른 것을 고르시오.

In the gym, members of the taekwondo club were busy practicing. Some were trying to kick as high as they could, and some were striking the sparring pad. Anna, the head of the club, was teaching the new members basic moves. Close by, her friend Jane was assisting Anna. Jane noticed that Anna was glancing at the entrance door of the gym. She seemed to be (A) **expecting/ expected** someone. At last, when Anna took a break, Jane came over to her and asked, "Hey, are you waiting for Cora?"

Anna answered the question by nodding uneasily. In fact, Jane knew what her friend was thinking. Cora was a new member, whom Anna had personally invited to join the club. Anna really liked her. Although her budget was tight, Anna bought Cora a taekwondo uniform. When she received it, Cora thanked her and promised, "I'll come to practice and work hard every day." However, unexpectedly, she came to practice only once and then never (B) **showing/ showed** up again.

Since Cora had missed several practices, Anna wondered (C) **that/ what** could have happened. Jane, on the other hand, was disappointed and said judgingly, "Still waiting for her, huh? I can't believe you don't feel disappointed or angry. Why don't you forget about her?" Anna replied, "Well, I know most newcomers don't keep their commitment to the club, but I thought that Cora would be different. She said she would come every day and practice." Just as **respond / about / her / to / was / Jane / to**, the door swung open. There she was!

Cora walked in like a wounded soldier with bandages on her face and arms. Surprised, Anna and Jane simply looked at her with their eyes wide open. Cora explained, "I'm sorry I've been absent. I got into a bicycle accident, and I was in the hospital for two days. Finally, the doctor gave me the okay to practice." Anna said excitedly, "No problem! We're thrilled to have you back!" Then, Jane gave Anna an apologetic look, and she responded with a friendly pat on Jane's shoulder.
