Traditionally, FIFA allowed the referees absolute power on the administration of the game. Any errors by the referees were viewed as part of the game. When a referee's call was disputed, both players and audiences often brought complaints about this policy. When the disputed call was about a goal, the complaints sometimes became violent. Technology is helping to settle such disputes over referees' calls during games. This trend was promoted when FIFA, the world's largest soccer association, decided to adopt goal-line technology for the 2014 World Cup.

The smart training suit comes in three parts: the top, the pants, and a plastic core. The top and the pants have several sets of sensors for each of the major muscle groups. Inside the top and the pants, there is a pocket that holds the core. The core reads all the data from the sensors and sends it to a smartphone app. The app lets coaches see in real time which muscle groups are being used during practice. After practice, the athlete can also review his performance. The use of smart clothes greatly helped the Warriors' coaches improve their training program.
